An Electronic Silent Spring Apr 20 2022 Our earth has natural electromagnetic energy, and over millions of years we have evolved to live in harmony with it. In our modern world, however, human-made electromagnetic fields are increasingly common -- wifi and mobile phone networks, for example. Katie Singer argues that these fields are now so prevalent that they are threatening the health of all aspects of our world -- people, plants, bees and birds -- and in particular our memory, DNA, behaviour, attention spans, sleep patterns and susceptibility to disease. This unique book examines the effects of electrification and presents solutions for communities and individuals who welcome the benefits of our digital world, but want to limit their exposure to electromagnetic radiation.

Tony Story Nov 03 2020 In Philadelphia, nothing is the same after a deadly shooting has everyone on edge and revenge is in the air. The Scientific Practice of Professional Psychology 14 2021 A workable vision of scientific practice has proven to be an elusive, if laudable, goal for professional psychology. The field cannot be faulted for failing to seek scientific wisdom, but it has been slow to integrate that wisdom fully with the wisdom of practice. This has proven to be a major oversight for, despite psychology's long if the standing commitment to science, practitioners are unlikely to think scientifically methods and products of science are described in ways that make it impossible to do. Unfortunately, the rhetoric of science too often has done just that: So focused has it been on the problem of distinguishing good science from bad that it has inadvertently defeated the hope of a practical science developing in our field. We offer one remedy for this situation: This book is about scientific thinking for the professional psychologist. Specifically, it is a primer on the application of scientific logic to professional practice. We argue that the professional needs a more straightforward and realistic scientific identity than heretofore has been available. The professional consciously must become a local clinical scientist, bringing all the power of scientific thought to the specifics of the clinical situation. Contrary to forces in psychology that preclude uncritical acceptance of science as given by academic researchers or, alternatively, that encourage criticism and ultimate disregard of the scientific endeavor, we call for a redoubling of efforts to incorporate scientific thought into practical professional inquiry.

Wake Up, Woods Feb 24 2020 Early in the year, our North American forests come to life as native wildflowers start to push up through patches of snow. With longer days and sunlight streaming down through bare branches of towering trees, life on the forest floor awakens from its winter sleep. Plants such as green dragon, squirrel corn, and bloodroot interact with their pollinators and seed dispersers and rush to create new life before the trees above leaf out and block the sun's rays. Wake Up, Woods showcases the splendor of our warming forests and offers clues to nature's annual springtime floral show as we walk in our parks and wilderness areas, or even in shade gardens around our homes. Readers of Wake Up, Woods will see that Gillian Harris, Michael Homoya and Shane Gibson, through illustrations and text, present a captivating look into our forests' biodiversity, showing how species depend on plants for food and help assure plant reproduction. This book celebrates some of nature's most fascinating moments that happen in forests where we live and play.

Similarity Methods in Engineering Dynamics Sep 20 2019 Here is the second revised and updated edition of probably the most practical sourcebook on similarity methods and modeling techniques available. Written by leading authorities who incorporate many of the latest advances in the field, this new work maps out techniques for modeling as well as instrumentation and data analysis for an extremely wide array of problems in engineering dynamics. This practical reference uses experimental test data on various engineering problems demonstrating exactly how and why these similarity methods work. The problems involve spread of oil slicks, explosive cratering, car crashes, space vehicle heat exchange, explosive forming, and more. The spectrum of topics covered and number of examples are far greater than in other texts. Of particular importance are the dissimilar material modeling techniques which bring new versatility and freedom to the modeler in structural dynamics. The book also contains a clear, in-depth discussion of the theory underlying modeling and includes alternate methods for developing model laws. The work will undoubtedly prove invaluable to every professional involved in testing or design of dynamic experiments.

Odes Jul 11 2021 'Interspersed with acts of breathtaking linguistic daring.' Charlotte Mendelson, Observer Book of the Year Opening with a powerful and tender 'Ode to the Hymen', Sharon Olds uses this age-old poetic form to address many aspects of herself, in a collection that is centred around the female body and female pleasures, and touches along the way on parts of her own story which will be familiar from earlier works, each episode and memory now burnished by the wisdom and grace of looking back. In such poems as 'Ode to My Sister', 'Ode of Broken Loyalty', 'Ode to My Whiteness', 'Blow Job Ode', 'Ode to the Last 38 Trees in New York City Visible from This Window', Olds treats us to an intimate self-examination that, like all her work, is universal and by turns searing and charming in its honesty. From the early bodily joys and sorrows of her girlhood to the recent deaths of those dearest to her - 'Sheffield Mountain Ode' for Galway Kinnell is one of the most stunning pieces here - Olds shapes her world in language that is startlingly fresh, profound in its conclusions, and life-giving for the reader.
