[Making Public Services Management Critical](#) Mar 02 2020 This book brings together public services policy and public services management in a novel way that is likely to resonate with academics, policy makers and practitioners engaged in the organization of public services delivery as it is from a perspective that challenges many received ideas in this field. Starting from the perspective of critical management studies, the contributors to this volume embed a critical perspective on policy orthodoxy around critical public services policy and management studies (CPPMS). In so doing the authors bring together previous disparate fields of public services policy and public services management, but more importantly, debate and present what 'critical' constitutes when applied to public services policy and management. This edited collection presents chapters from a broad range of public services domains including health, education, prisons, local and central government and deals with a range of contemporary issues facing public services managers are examined, including regulation of professions, risk management, user involvement, marketing and leadership.

Badass: Making Users Awesome Oct 01 2022 Note for ebook customers: The design and layout of this book play a key role in conveying the author's message. When creating the ebooks, we've tried to keep the look and feel of the print edition, but this means that not all e-reading devices will support the files. The EPUB format is optimized for iPad. The Mobi files are optimized for Kindle Fire tablets and phones and for Kindle reading apps. Imagine you're in a game with one objective: a bestselling product or service. The rules? No marketing budget, no PR stunts, and it must be sustainably successful. No short-term fads. This is not a game of chance. It is a game of skill and strategy. And it begins with a single question: given competing products of equal pricing, promotion, and perceived quality, why does one outsell the others? The answer doesn't live in the sustainably successful products or services. The answer lives in those who use them. Our goal is to craft a strategy for creating successful users. And that strategy is full of surprising, counter-intuitive, and astonishingly simple techniques that don't depend on a massive marketing or development budget. Techniques typically overlooked by even the most well-funded, well-staffed product teams. Every role is a key player in this game. Product development, engineering, marketing, user experience, support—everyone on the team. Even if that team is a start-up of one. Armed with a surprisingly overlooked science and a unique POV, we can reduce the role of luck. We can build sustainably successful products and services that rely not on unethical persuasive marketing tricks but on helping our users have deeper, richer experiences. Not just in the moments while they're using our product but, more importantly, in the moments when they aren't.
