It Could Happen to You Jun 23 2022 Another outstanding Spanish artist presents everyday situations gone very, very lubricious. A doctor receives a visit from a client who needs a different kind of help. A wedding dress maker is hit on by a horny bride. A hot dentist who puts you to sleep and then into bondage gear? Hey, you never know, it could happen to you!

**Toward a Universal Radio Frequency System for Special Operations Forces** Apr 21 2022 The U.S. Special Operations Command (SOCOM) was formed in response to the failed rescue attempt in 1980 of American hostages held by Iran. Among its key responsibilities, SOCOM plans and synchronizes operations against terrorist networks. Special operations forces (SOF) often operate alone in austere environments with only the items they can carry, which makes equipment size, weight, and power needs especially important. Specialized radios and supporting equipment must be carried by the teams for their radio-frequency (RF) operations. As warfighting demands on SOCOM have intensified, SOCOM's needs for significantly improved radio-frequency (RF) systems have increased. Toward a Universal Radio Frequency System for Special Operations Forces examines the current state of the art for both handheld and manpackable platform-mounted RF systems, and determines which frequencies could be provided by handheld systems. The book also explores whether or not a system that fulfills SOF's unique requirements could be deployed in a reasonable time period. Several recommendations are included to address these and other issues.
