Stimulating this development was the realization that an important part of company rationalization had been overlooked, namely, provision of adequate supervision of the materials flow. This area was given particular attention, firstly, because the relatively high percentage of materials costs (the value of materials and cost of supervision) in the total production costs offered the possibility of considerable cost reductions and liquidity improvements; and secondly, because effective supervision permits faster reactions to changes and reliable delivery times -essential considerations for a competitive company. An important contribution to the realization of these possibilities is found in an efficient organizational structure in combination with an
