Yet, many children struggle in learning to write, and often this is related to difficulties in the development of their oral-language skills. For students with oral language difficulties text production is particularly challenging, yet there have been few attempts to consider the impact of different oral language problems on the production of written text. This book focuses on the relationship between oral language problems and writing problems for children with hearing loss, those with oral-language difficulties and those with dyslexia. The causes and nature of their writing problems are examined by experts in the fields. Authors from three continents and nine countries contributed their research to extend our understanding of the problems that these children face. The collection provides timely information across languages and countries, enhancing our understanding of the links between oral language problems and writing, informing both writing assessment and intervention.

Chicano School Failure and Success May 14 2021 During the early 1990s - when this book's first edition was published - the Chicano population in the USA numbered nearly 13 million (two thirds of its total Latino population). Indications were that school problems and conditions - which were already poor for these people - were worsening. A decade down the line, how has the situation changed? From various perspectives, the second edition of this respected work examines the school failure and success of Chicano students. For many years two theories have prevailed: one being that institutional forces and structures that promote and maintain inequality are the root cause of these poor schooling conditions and outcomes; the other being a set of insidious assumptions steeped in racism. In recent years, however, scholarship has followed more constructive streams of thought. Two features characterise his new edition. Each contributor provides a comprehensive and state-of-the-art chapter, updated with a contemporary commentary on Chicano students. They also address the question of whether the educational status of the Chicano population will grow commensurately with its population.
