Origin of Elements in the Solar System Apr 17 2021 Based on an American Chemical Society Symposium organized by Professors Glenn Seaborg and Oliver Manuel, this volume provides a comprehensive record of different views on this important subject at the end of the 20th century. They have assembled a blend of highly respected experimentalists and theorists from astronomy, geology, meteoritics, planetology and nuclear chemistry and physics to discuss the origin of elements in the solar system. The intent was to include all points of view and let history judge their validity.

Stochastic Models in Reliability, Network Security and System Safety Oct 31 2019 This book is dedicated to Jinhua Cao on the occasion of his 80th birthday. Jinhua Cao is one of the most famous reliability theorists. His main contributions include: published over 100 influential scientific papers; published an interesting reliability book in Chinese in 1986, which has greatly

influenced the reliability of education, academic research and engineering applications in China; initiated and organized Reliability Professional Society of China (the first part of Operations Research Society of China) since 1981. The high admiration that Professor Cao enjoys in the reliability community all over the world was witnessed by the enthusiastic response of each contributor in this book. The contributors are leading researchers with diverse research perspectives. The research areas of the book iclude a broad range of topics related to reliability models, queueing theory, manufacturing systems, supply chain finance, risk management, Markov decision processes, blockchain and so forth. The book consists of a brief Preface describing the main achievements of Professor Cao; followed by congratulations from Professors Way Kuo and Wei Wayne Li, and by Operations Research Society of China, and Reliability Professional Society of China; and further followed by 25 articles roughly grouped together. Most of the articles are written in a style understandable to a wide audience. This book is useful to anyone interested in recent developments in reliability, network security, system safety, and their stochastic modeling and analysis.

The System May 31 2022 Longlisted for the CWA Ian Fleming Steel Dagger 2021 'Excellent, lucid, intelligent and gripping' – Scotsman 'An utterly riveting read' – Guardian, Thriller of the Month 6 December 1993. A drug dealer called Scrappy is shot and left for dead on her mother's lawn in South Central Los Angeles. Two local gang members, Wizard and Dreamer, are arrested. The problem is: one is guilty, the other wasn't even there. It had to be a frame-up. And the cops had to be responsible, didn't they? Narrated by the characters involved – the suspects, the victim, the families who love them, and those simply doing their jobs – The System tells the story of one crime, from the moments before shots are fired to the verdict and its violent aftershocks. It's a breakneck journey through the American criminal justice system. A system that can save you, or break you.

Vibrations in the Production System May 07 2020 This book presents the current situation in measurement and analysis of vibrations in production systems with the usage of water jet technology, focusing on sieve analysis and its principle of functioning. The authors compare the sizes of vibration accelerations amplitude with and without the usage of a narrow grain fraction. The data collection and frequency spectrum analysis presented form the basis for further research in this area. It is designed for researchers, educated public, students and university teachers with a technical focus on monitoring and diagnostics of technical equipment.

Radiation and Water in the Climate System Nov 24 2021 The study of the earth's climate requires reliable global data sets to validate numerical simulation models and to identify regional and global fluctuations and trends. This book presents ways to obtain such data from space-borne and ground-based measurements, both passive and active, over the entire electromagnetic spectrum. It describes the basics of such methods together with the most recent advancements and spans the field from clouds and the planetary radiation budget to surface processes and ocean properties. Each subject is backed by extensive reference lists to enable readers to probe more deeply.

The Play in the System Mar 17 2021

Work the System Feb 13 2021 A Simple Mindset Tweak Will Change Your Life. After a fifteen-year nightmare operating a stagnant service business, Sam Carpenter developed a down-to-earth methodology that knocked his routine eighty-hour workweek down to a single hour—while multiplying his bottom-line income more than twenty-fold. In Work the System, Carpenter reveals a profound insight and the exact uncomplicated, mechanical steps he took to turn his business and life around without turning it upside down. Once you "get" this new vision, success and

serenity will come quickly. You will learn to: • Make a simple perception adjustment that will change your life forever. • See your world as a logical collection of linear systems that you can control. • Manage the systems that produce results in your business and your life. • Stop fire-killing. Become a fire-control specialist! • Maximize profit, create client loyalty, and develop enthusiastic employees who respect you. • Identify insidious “errors of omission.” • Maximize your biological and mechanical “prime time” so that you are working at optimum efficiency. • Design the life you want—and then, in the real world, quickly create it! You can keep doing what you have always done, and continue getting mediocre, unsatisfactory results. Or you can find the peace and freedom you’ve always wanted by transforming your business or corporate department into a finely tuned machine that runs on autopilot!

Emergence of Cyber Physical System and IoT in Smart Automation and Robotics Jan 03 2020 Cyber-Physical Systems (CPS) integrate computing and communication capabilities by monitoring and controlling the physical systems via embedded hardware and computers. This book brings together new and futuristic findings on IoT, Cyber Physical Systems and Robotics leading towards Automation and solving issues of various critical applications in Real-time. The book initially overviews the concepts of IoT, IIoT and Cyber Physical Systems followed by various critical applications and discusses the latest designs and developments that provide common solutions for the convergence of technologies. In addition, the book specifies methodologies, algorithms and other relevant architectures in various fields that include Automation, Robotics, Smart Agriculture and Industry 4.0. The book is intended for practitioners, enterprise representatives, scientists, students and Ph.D Scholars in hopes of steering research further towards cyber physical systems design and development and implementation across various domains. Additionally, this book can be used as a secondary reference, or rather one-stop guide, by professionals for real-life implementation of cyber physical systems. The book highlights: • A Critical Coverage of various domains: IoT, Cyber Physical Systems, Industry 4.0, Smart Automation and related critical applications. • Advanced elaborations for target audiences to understand the conceptual methodology and future directions of cyber physical systems and IoT. • An approach towards Research Orientations to enable researchers to point out areas and scope for implementation of Cyber Physical Systems in several domains for better productivity.

The Genius of the System May 19 2021 Examines the rise and fall of Hollywood from its beginnings in the 1920s to its decline in the 1950s and 1960s

Juries in the Japanese Legal System Jul 21 2021 Trial by jury is not a fundamental part of the Japanese legal system, but there has been a recent important move towards this with the introduction in 2009 of the lay assessor system whereby lay people sit with judges in criminal trials. This book considers the debates in Japan which surround this development. It examines the political and socio-legal contexts, contrasting the view that the participation of ordinary citizens in criminal trials is an important manifestation of democracy, with the view that Japan as

a society where authority is highly venerated is not natural territory for a system where lay people are likely to express views at odds with expert judges. It discusses Japan's earlier experiments with jury trials in the late 19th Century, the period 1923-43, and up to 1970 in US-controlled Okinawa, compares developing views in Japan on this issue with views in other countries, where dissatisfaction with the jury system is often evident, and concludes by assessing how the new system in Japan is working out and how it is likely to develop.

Efficiency of heat and work in a regional energy system Sep 30 2019 One of the largest flows of energy in Swedish municipalities is the fuel-energy flow through the regional combined heat and power (CHP) plant. The customer products from this flow are mainly electricity to the electricity grid and heat to the building sector. There are many ways to describe and examine this fuel-energy flow, and there are many perspectives. This thesis presents one perspective. It is a top-down, analytical and numerical perspective on the efficiency of heat and work in a regional energy system. The analysis focus on the present situation in Linköping municipality and aims at describing the energy efficiency improvement potential. Three subsystems are considered, the regional production of electricity, the regional production of heat, and the regional public transport by bus. These three systems are physically all heat engines i.e. engines that derive work and/or heat from fuel combustion processes. It is important to notice that the analysis in this thesis does not describe the theoretical improvement potential, that potential is considerably higher than the implementable potential, but of no practical use. Instead the analysis is as far as possible based on real world measured efficiencies and efficiency values of best practice (Best available technology). The analysis shows that hardware investments at the CHP plant can improve the electricity generation efficiency and thereby reduce CO2 emissions. The investments are in high pressure turbines, medium pressure turbines and preheaters. The size of the improvement is hard to quantify because it depends partly on unknown factors in the surrounding electricity market. In the studied system CO2 reduction could be as high as 40 - 60 %. The regionally produced biogas would be used more efficiently if it were used in the local combined cycle gas turbine instead of being used in internal combustion engines in buses. The buses would instead be electrically driven. This use of biogas would create a better integrated fuel-energy flow and reduce heat losses. Another improvement is to reduce the system temperatures in the district heating system. The study shows that the efficiency gains, because of lower system temperatures, would increase electricity production by about 1 – 3%, and that greenhouse gas emissions would be reduced by 4 – 20%. However, these improvements are dependent on demand side investments in the district heating system and are therefore slow to implement. Ett av de största energiflödena i svenska kommuner är bränsle/energi-flödet genom det regionala kraftvärmeverket. De konsumentprodukter som detta energiflöde producerar är främst uppvärmning av bostäder och elkraft. Det finns många sätt att beskriva och utvärdera detta bränsle/energi-flöde och det finns många olika perspektiv. Det här arbetet analyserar energiflödet med en analytisk ”top-down” metod. Analysen utgår ifrån den nuvarande situationen i Linköpings kommun och avser att belysa den förbättringspotential som finns med avseende på systemets verkningsgrad. Tre delsystem har studerats, det regionala systemet för värmeproduktion, det regionala systemet för elproduktion och det regionala kollektivtrafiksystemet för innerstadstrafik med buss. Dessa tre system är fysikaliskt värmemotorer d.v.s. de är system som nyttjar termisk energi från förbränningsprocesser för att utföra ett arbete och/eller generera värme. Det är viktigt att notera att analyserna i detta arbete inte avser att beskriva en teoretisk förbättringspotential. Analyserna avser istället att belysa den praktiska, implementerbara, förbättringspotentialen. Därför har arbetet så långt som möjligt utgått ifrån uppmätta data och numeriska värden på

verkningsgrader ifrån redan existerande anläggningar eller tekniska komponenter. Analyserna visar att hårdvaruinvesteringar i det lokala kraftvärmeverket skulle öka elproduktionen och därigenom sänka koldioxidutsläppen. De investeringar som skulle behöva göras är investeringar i högtrycksturbiner, mellantrycksturbiner och förvärmare. De sänkta koldioxidutsläppen är svåra att kvantifiera eftersom de delvis beror på okända faktorer på den omgivande elmarknaden. Reduktionen av koldioxidutsläppen skulle kunna vara så stor som 40 - 60 %. Den lokalt producerade biogasen skulle användas mer effektivt om den användes i den lokala gaskombi-anläggningen istället för att användas som bussbränsle som är det nuvarande användningsområdet för detta bränsle. Bussarna skulle istället kunna ersättas med elbussar. En sådan förändring av biogas-användningen skulle innebära ett bättre integrerat energisystem med lägre värmeförluster. En annan möjlig förbättring av kraftvärmesystemet är att sänka returtemperaturerna i fjärrvärmesystemet. Analyserna visar att elverkningsgraden skulle förbättras 1 – 3 % och att koldioxidutsläppen skulle kunna minska med 4 – 20 %. Dessa förbättringar skulle däremot kräva investeringar på kraftvärmesystemets kundsida och bedöms därför vara långsamma att implementera.

The Global Water System in the Anthropocene Sep 22 2021 The Global Water System in the Anthropocene provides the platform to present global and regional perspectives of world-wide experiences on the responses of water management to global change in order to address issues such as variability in supply, increasing demands for water, environmental flows and land use change. It helps to build links between science and policy and practice in the area of water resources management and governance, relates institutional and technological innovations and identifies in which ways research can assist policy and practice in the field of sustainable freshwater management. Until the industrial revolution, human beings and their activities played an insignificant role influencing the dynamics of the Earth system, the sum of our planet‘s interacting physical, chemical, and biological processes. Today, humankind even exceeds nature in terms of changing the biosphere and affecting all other facets of Earth system functioning. A growing number of scientists argue that humanity has entered a new geological epoch that needs a corresponding name: the Anthropocene. Human activities impact the global water system as part of the Earth system and change the way water moves around the globe like never before. Thus, managing freshwater use wisely in the planetary water cycle has become a key challenge to reach global environmental sustainability.

Fifty Years in the System Jul 29 2019 From the age of nine, Jimmy Laing lived under lock and key, first at the Baldovan mental institution and then at Carstairs State Hospital, the Scottish equivalent of Broadmoor. He was never tried or sentenced, for he had committed no crime. He was simply the victim of the system of dealing with problem children in the 1930s. Yet once in that system, he was certified insane and remained its captive for nearly 50 years, experiencing brutality and sexual harassment by staff and inmates, and witnessing theft, corruption and even murder. His long struggle to prove his sanity ended with conditional release in 1987.

Problems found in the financial disclosure system for Department of Commerce employees Jul 09 2020

Butterflies in the System Oct 12 2020 Butterflies in the System is a story about love, incarceration, and perseverance. Inspired by true events, it follows a year in the life of five teenagers as they struggle through the youth protection system in Montreal. Through the halls of a group home, into lockdown within a youth detention centre, and onto the streets, Sam and her peers navigate through a world kept hidden from the public eye. Their future in the hands of judges, social workers, and childcare workers, the teens learn the value in empathy and

friendship. Jane Powell is an alumna of Ville Marie Social Services and Youth Horizons (now Batshaw Youth and Family Centres) in Montreal. She wrote this story to raise awareness of the challenge teens face while in youth protection, where they are subjected to variable and often unethical care. "Great read! The first chapter alone brought me back 30 years. It's fiction, but it was still very close to home for me. I recommend this book to anyone who even spent 48 hours in the system." - Lyne Meilleur, alumna 1989-92, Shawbridge Youth Centres and Youth Horizons in Montreal, QC "I loved Butterflies in the System for its raw and honest look at life in the DYP system as seen through the eyes of someone living it. As a childcare worker and special care counsellor, I found the narrative accurately heartbreaking and inspirational. Sam's journey is poignant, funny, riveting and brutally honest. The story reflects what still does and doesn't work in our flawed social service network. A compelling read!" -Janet Gallagher, special care counsellor and childcare worker in Montreal, QC "An excellent follow up to Sky-Bound Misfit, Butterflies in the System showcases Sam's struggles when she finds herself within the youth protection system. I found the story fascinating and had a hard time putting it down. The characters were vividly real. I loved the connecting pieces that related to Sky-Bound Misfit. Vincent's appearance, along with Frankie's, was stellar ... a great way to tie both novels together, which left me wanting to read Sky-Bound Misfit all over again." -Alicia Grills, avid reader, Golden, BC

LOST IN THE SYSTEM Feb 02 2020 From Simon & Schuster, Lost in the System by Charlotte Lopez explores the life and struggle of a pageant success. Miss Teen USA for 1992, a foster child, recounts her struggle since the age of two to find stability within multiple homes and shelters, her triumphant pageant success, and her joyful adoption

The System Jul 01 2022 From the bestselling author of Saving Capitalism and The Common Good, comes an urgent analysis of how the "rigged" systems of American politics and power operate, how this status quo came to be, and how average citizens can enact change. There is a mounting sense that our political-economic system is no longer working, but what is the core problem and how do we remedy it? With the characteristic clarity and passion that have made him a central civil voice, bestselling author of Saving Capitalism and The Common Good Robert B. Reich shows how wealth and power have combined to install an oligarchy and undermine democracy. Reich exposes the myths of meritocracy, national competitiveness, corporate social responsibility, the “free market,” and the political “center,” all of which are used by those at the top to divert attention from their takeover of the system and to justify their accumulation of even more wealth and power. In demystifying the current system, Reich reveals where power actually lies and how it is wielded, and invites us to reclaim power and remake the system for all.

Gene Expression and Cell-Cell Interactions in the Developing Nervous System Aug 22 2021 The dramatic advances in molecular genetics are becoming incorporated into neurobiologic studies at an ever increasing rate. In developmental neurobiology, the importance of cell cell interactions for neurogenesis and gene expression is be ginning to be understood in terms of the molecular bases for these interactions. This book seeks to emphasize the importance of molecular technology in the study of neurogenetic mechanisms and to explore the possible relationships between specific cell cell interactions and regulated gene expression in the develop ing nervous ~stem. This volume consists of nineteen chapters which address ques tions of gene expression and the importance of cell-cell interac tions as key factors in the developing nervous ~stem. Rather than viewing these two processes as separate mechanisms, as the organi zation of these chapters might suggest, we would like to emphasize the interplay of these genetic and epigenetic influences in all phases of neural ontogeny, a concept which is made clear by the subject matter of the contributions themselves. The authors of these chapters were participants in

selected ~mposia from the Fourth Congress of the International Society of Developmental Neuroscience held in Salt Lake City, Utah, July 3-7, 1983.

Thoughts on the present collegiate system in the United States Mar 29 2022

Trust in the System Jan 27 2022 An ethnographic exploration of research ethics committees in the UK, which highlights the central role of trust in biomedical regulatory decision making. -- .

Cognitive Engineering in the Design of Human-computer Interaction and Expert Systems Sep 10 2020

The System Sep 03 2022 The internet is a network of physical cables and connections, a web of wires enmeshing the world, linking huge data centers to one another and eventually to us. All are owned by someone, financed by someone, regulated by someone. The book sets out on a global journey into the inner workings of the system. From the computer scientists to the cable guys, the billionaire investors to the ad men, the intelligence agencies to the regulators, these are the real-life figures powering the internet and pulling the strings of our society. The author shows how an invention once hailed as a democratizing force has concentrated power in places it already existed - that the system, in other words, remains the same as it did before

Wrench in the System Aug 02 2022 WRENCH IN THE SYSTEM Why business software doesn't work—and how to fix it Every year, businesses waste billions of dollars on information technology that doesn't communicate clearly with the people who use it. This fundamental flaw causes errors and delays, lowers profits, and can even endanger lives. In this groundbreaking book, technology designer Harold Hambrose shows executives and managers how to turn underperforming digital assets into powerhouse systems—how to specify small changes that dramatically boost productivity, how to reduce training costs, and how to ask vendors the right questions. Wrench in the System reveals: Why so many of our essential software systems are needlessly confusing How to make low-cost changes that provide direct, measurable benefits The hidden costs of forcing people to adapt to clumsy electronic tools The secrets of matching software to the needs of the company How to leverage the power of technology for innovation Information technology is still in its adolescence, and Hambrose explains that because the industry has grown so quickly, it's still in an awkward phase. Software manufacturers have been in such a rush to add new features that they haven't paid enough attention to the human beings who use their products. Most software systems are built to fulfill business requirements and technical specifications, but often they fail to meet expectations because they aren't designed to anticipate human needs. As a result, much of our most powerful business software is ineffective and underutilized. With compelling case histories and an engaging narrative, Hambrose exposes popular nonsense about software systems and shows how to evaluate them and measure their performance just as we do every other product. This timely book by an industry insider tells decision makers what they need to know to un-lock the full potential of one of their biggest business investments.

Decision-making in the Criminal Justice System Oct 04 2022

New Computational Methods in Power System Reliability Jan 15 2021 Power system reliability is the focus of intensive study due to its critical role in providing energy supply to modern society. This comprehensive book describes application of some new specific techniques: universal generating function method and its combination with Monte Carlo simulation and with random processes methods, Semi-Markov and Markov reward models and genetic algorithm. The book can be considered as complementary to power system reliability textbooks.

Static in the System Apr 05 2020 In this rich study of noise in American film-going culture, Meredith C. Ward shows how aurality can reveal important fissures in American motion picture history, enabling certain types of listening cultures to form across time. Connecting this history of

noise in the cinema to a greater sonic culture, Static in the System shows how cinema sound was networked into a broader constellation of factors that affected social power, gender, sexuality, class, the built environment, and industry, and how these factors in turn came to fruition in cinema's soundscape. Focusing on theories of power as they manifest in noise, the history of noise in electro-acoustics with the coming of film sound, architectural acoustics as they were manipulated in cinema theaters, and the role of the urban environment in affecting mobile listening and the avoidance of noise, Ward analyzes the powerful relationship between aural cultural history and cinema's sound theory, proving that noise can become a powerful historiographic tool for the film historian.

Integration of Renewables in Power Systems by Multi-Energy System Interaction Dec 02 2019 This book focuses on the interaction between different energy vectors, that is, between electrical, thermal, gas, and transportation systems, with the purpose of optimizing the planning and operation of future energy systems. More and more renewable energy is integrated into the electrical system, and to optimize its usage and ensure that its full production can be hosted and utilized, the power system has to be controlled in a more flexible manner. In order not to overload the electrical distribution grids, the new large loads have to be controlled using demand response, perchance through a hierarchical control set-up where some controls are dependent on price signals from the spot and balancing markets. In addition, by performing local real-time control and coordination based on local voltage or system frequency measurements, the grid hosting limits are not violated.

Polychlorinated Biphenyls (PCB) in the National Airspace System Dec 14 2020

Membrane Potential Imaging in the Nervous System and Heart Jun 19 2021 This volume discusses membrane potential imaging in the nervous system and in the heart and modern optical recording technology. Additionally, it covers organic and genetically-encoded voltage-sensitive dyes; membrane potential imaging from individual neurons, brain slices, and brains in vivo; optical imaging of cardiac tissue and arrhythmias; bio-photonics modelling. This is an expanded and fully-updated second edition, reflecting all the recent advances in this field. Twenty chapters, all authored by leading names in the field, are cohesively structured into four sections. The opening section focuses on the history and principles of membrane potential imaging and lends context to the following sections, which examine applications in single neurons, networks, large neuronal populations and the heart. Topics discussed include population membrane potential signals in development of the vertebrate nervous system, use of membrane potential imaging from dendrites and axons, and depth-resolved optical imaging of cardiac activation and repolarization. The final section discusses the potential – and limitations – for new developments in the field, including new technology such as non-linear optics, advanced microscope designs and genetically encoded voltage sensors. Membrane Potential Imaging in the Nervous System and Heart is ideal for neurologists, electro physiologists, cardiologists and those who are interested in the applications and the future of membrane potential imaging.

System for Managing the National Forests in the East Dec 26 2021

The Play in the System Nov 05 2022 What does artistic resistance look like in the twenty-first century, when disruption and dissent have been co-opted and commodified in ways that reinforce dominant systems? In The Play in the System Anna Watkins Fisher locates the possibility for resistance in artists who embrace parasitism—tactics of complicity that effect subversion from within hegemonic structures. Fisher tracks the ways in which artists on the margins—from hacker collectives like Ubermorgen to feminist writers and performers like Chris Kraus—have willfully abandoned the radical scripts of opposition and refusal long identified with anticapitalism and

feminism. Space for resistance is found instead in the mutually, if unevenly, exploitative relations between dominant hosts giving only as much as required to appear generous and parasitical actors taking only as much as they can get away with. The irreverent and often troubling works that result raise necessary and difficult questions about the conditions for resistance and critique under neoliberalism today.
