A Practical Guide for Studying Chua's Circuits

Jun 27 2022 Autonomous and nonautonomous Chua's circuits are of special significance in the study of chaotic system modeling, chaos-based science and engineering applications. Since hardware and software-based design and implementation approaches can be applied to Chua's circuits, these circuits are also excellent educative models for studying and experimenting nonlinear dynamics and chaos. This book not only presents a collection of the author's published papers on design, simulation and implementation of Chua's circuits, it also provides a systematic approach to practising chaotic dynamics.

Faith Unleashed Jun 03 2020 It doesn't matter if you've been a Christian for a short time, a long time, if you're just starting your journey, or if you don't quite believe yet-maybe you have questions about faith and God and how it all fits together in the grand scheme of life. Whatever your spiritual temperature, this book is for you! You're going to learn about the never ending love of God, probe into God's infallible Word, and ask questions that will take you deeper in your faith walk. And in the midst of exploring, your faith will be activated in a mighty way as you embark on an inspirational journey that will release in you a deep belief in what God is able to do and WILL do in your life. Faith allows us to believe that the invisible God can accomplish the physically impossible. Faith dwells on a spiritual plane, not a physical or scientific one and one thing is for sure: there will never be any incongruity between godly faith and true science. The faith I talk about in this book is a greater faith. It is a spiritual inheritance that brings with it a spiritual encounter with God because God wants us to believe that as we work for Him, as we trust in Him, and as we do the will of God, all things will work together for our good. Life is all about you trusting God and believing Him to do His will and in doing His will you know that all these things, including basic necessities like food and shelter, are going to be added to you. Having "all these things" means that through Jesus Christ, we now have access to all we need. I believe there is something very significant for you in these

pages, and as I said, the truth of Scripture stands, so whatever your level of faith, this book will shift your thoughts, activate your faith, and then elevate your faith! Hold onto your seat, take a deep breath, and let out a holler to God because your faith is going on a journey!

Analysis, Controllability and Optimization of Time-Discrete Systems and Dynamical Games May 15 2021 Focuses on the analysis, optimization and controllability of time-discrete dynamical systems and games under the aspect of stability, controllability and (for games) cooperative and non-cooperative treatment. The investigation of stability is based on Lyapunov's method which is generalized to non-autonomous systems. Optimization and

controllability of dynamical systems is treated, among others, with the aid of mapping theorems such as implicit function theorem and inverse mapping theorem. Dynamical games are treated as cooperative and non-cooperative games and are used in order to deal with the problem of carbon dioxide reduction under economic aspects. The theoretical results are demonstrated by various applications.

Biometric System and Data Analysis Nov 20 2021 This book brings together aspects of statistics and machine learning to provide a comprehensive guide to evaluating, interpreting and understanding biometric data. It naturally leads to topics including data mining and prediction to be examined in detail. The book places an emphasis on the various performance measures available for biometric systems, what they mean, and when they should and should not be applied. The evaluation techniques are presented rigorously, however they are always accompanied by intuitive explanations. This is important for the increased acceptance of biometrics among non-technical decision makers, and ultimately the general public.

Accelerating MATLAB with GPU Computing Jul 29 2022 Beyond simulation and algorithm development, many developers increasingly use MATLAB even for product deployment in computationally heavy fields. This often demands that MATLAB codes run faster by leveraging the distributed parallelism of Graphics Processing Units (GPUs). While MATLAB successfully provides high-level functions as a simulation tool for rapid prototyping, the underlying details and knowledge needed for utilizing GPUs make MATLAB users hesitate to step into it. *Accelerating MATLAB with GPUs* offers a primer on bridging this gap. Starting with the basics, setting up MATLAB for CUDA (in Windows, Linux and Mac OS X) and profiling, it then guides users through advanced topics such as CUDA libraries. The authors share their experience developing algorithms using MATLAB, C++ and GPUs for huge datasets, modifying MATLAB codes to better utilize the computational power of GPUs, and integrating them into commercial software products. Throughout the book, they demonstrate many example codes that can be used as templates of C-MEX and CUDA codes for readers' projects. Download example codes from the publisher's website:

<http://booksite.elsevier.com/9780124080805/> Shows how to accelerate MATLAB codes through the GPU for parallel processing, with minimal hardware knowledge Explains the related background on hardware, architecture and programming for ease of use Provides simple worked examples of MATLAB and CUDA C codes as well as templates that can be reused in real-world projects

A Short Guide to Risk Appetite May 27 2022 How much risk should we take? A Short Guide to Risk Appetite sets out to help all those who need to decide how much risk can be taken in a particular risky and important situation. David Hillson and Ruth Murray-Webster introduce the RARA Model to explain the complementary and central roles of Risk Appetite and Risk Attitude, and along the way they show how other risk-related concepts fit in. Risk thresholds are the external expression of inherent risk appetite,

and the challenge is how to set the right thresholds. By progressively deconstructing the RARA Model, the authors show that the essential control step is our ability to choose an appropriate risk attitude. The book contains practical guidance to setting risk thresholds that take proper account of the influences of organisational risk culture and the individual risk preferences of key stakeholders. Alongside this, individuals and organisations need to choose the risk attitude that will optimise their chances of achieving the desired objectives.
