The Scholarship of Teaching and Learning Dec 30 2019 The Scholarship of Teaching and Learning: A Guide for Scientists, Engineers, and Mathematicians shows college and university faculty members how to draw on their disciplinary knowledge and teaching experience to investigate questions about student learning. It takes readers all the way through the inquiry process beginning with framing a research question and selecting a research design, moving on to gathering and analyzing evidence, and finally to making the results public. Numerous examples are provided at each stage, many from published studies of teaching and learning in science, engineering, or mathematics. At strategic points, short sets of questions prompt readers to pause and

reflect, plan, or act. These questions are derived from the authors' experience leading many workshops in the United States and Canada on how to do the scholarship of teaching and learning (SoTL). The taxonomy of SoTL questions—What works? What is? What could be?—that emerged from the SoTL studies undertaken by scholars in the Carnegie Academic for the Scholarship of Teaching and Learning serves as a framework at many stages of the inquiry process. The book addresses the issue of evaluating and valuing this work, including implications for junior faculty who wish to engage in SoTL. The authors explain why SoTL should be of interest to STEM (science, technology, engineering, and mathematics) faculty at all types of higher education institutions, including faculty members active in traditional STEM research. They also give their perspective on the benefits of SoTL to faculty, to their institutions, to the academy, and to students.

A Research Perspective Dec 10 2020 All educators in teacher education want to know what factors contribute to the academic success of undergraduate education majors or pre-service teachers. Teacher educators of eight universities across the state of South Carolina were determined to find out. This compilation is a result of their inquiry. The conclusions of this book are drawn from the contributors and each chapter helps expand teacher educator readers' understanding and informs their practice as they work with initial certification students in educator preparation. A Research Perspective promotes the academic success of pre-service teachers by exploring common research questions posed to education majors of the eight universities in South Carolina. Ranging from historically Black to predominately White, from private to public universities across the state, these institutions serve a diverse body of students who described some insightful contributing factors and challenges to their success. The case scenario begins each chapter that provides contextual snapshots of the myriad choices and obstacles faced by pre-service teachers; the research narratives offer insightful analysis for teacher educators. Though written from the perspective of South Carolina, the lessons learned and recommendations for teacher education are relevant to any state. This is a must-read for all teacher educators interested in student success. This book is most interesting to members of teacher education organizations, especially the Association of Teacher Educators (ATE) and its 41 state and regional affiliates, including South Carolina Association of Teacher Educators (SCATE) and Southeast Regional Association of Teacher Educators (SRATE). It also has wide appeal to members of other professional organizations, such as National Association for Multicultural Education (NAME) and American

Educational Research Association (AERA). Finally, it's a good choice for professional learning communities of district personnel and classroom teachers since it provides insights that will strengthen mentoring and support systems provided to student teachers.

Assessment and Learning in Content and Language Integrated Learning (CLIL) Classrooms Sep 06 2020 This volume builds a conceptual basis for assessment promoting learning in Content and Language Integrated Learning (CLIL) classrooms and proposes practical assessment approaches and activities that CLIL teachers can apply in the classroom. CLIL as an educational context is unique, as language and content learning happen simultaneously. The efficacy of such instruction has been studied extensively, but assessment in CLIL classrooms has drawn much less attention. The present volume aims to fill this gap. Arranged based on different ways that content and language are integrated in CLIL, the chapters in this book together build a solid theoretical basis for assessment promoting learning in CLIL classrooms. The authors discuss how assessment eliciting this integration yields insights into learners' abilities, but more importantly, how these insights are used to promote learning. The contributors to the volume together build the understanding of classroom-based assessment as cyclic, of teaching, learning, and

assessment as inter-related, and of content and language in CLIL classrooms as a dialectical unity. This volume will spark interest in and discussion of classroom-based assessment in CLIL among CLIL educators and researchers, enable reflection of classroom assessment practices, and foster collaboration between CLIL teachers and researchers. The assessment approaches and activities discussed in the volume, in turn, will help educators understand the scope of applications of assessment and inspire them to adapt these to their own classrooms.

Dangerous Counterstories in The Corporate Academy Jul 25 2019 Although the social reality is stark for progressive scholars who engage in scholarly activities or are committed to guiding their students to develop a social-just praxis in the circles of higher education, some scholars have found fissures amid the alienating, often hostile academic world to learn, grow, and create transformative communities. Up to this date, however, their stories have not been captured. Therefore, the purpose of this volume is to highlight alternative narratives generated by transformative scholars who have maintained their oppositional identity to the structures that oppress the vast majority of citizens. By bringing together these narratives, we focus on those who have joined with likeminded colleagues to teach, engage in activism, and conduct emancipatory forms of research, learning to negotiate and survive academic and corporate realities in spite of restrictive climates. Not only are these stories vital for helping students, academics, and the wider community understand how commercialized forces are impacting the professional lives of critical scholars in the academy, they have the power to help current and future critical pedagogues define (and redefine) themselves in a social world which is continually "promoting a narrow and intellectually stifling agenda for the role of education and turning the public against the very idea of a critical education" (McLaren, 2006). As stated by Bruner (1986) stories give "a map of possible

roles and possible worlds in which action, thought, and self-definition are possible (or desirable)" (p. 2, cited in Collins & Cooper, 2005). These possibilities for definition and redefinition are what we seek to present, explore and understand.

Time and Learning in the Special Education Classroom May 27 2022 Focusing on the relationship between time use and learning results, this book explores the instructional processes in special education classrooms. The text emphasizes teacher control of time resources at the classroom level, instructional management strategies that conserve and enhance instructional time, and the efficient and effective use of learning time to enhance student performance outcomes. The dual dimensions of time and task are incorporated throughout the text to communicate the essential message that time and the appropriate use of time go hand in hand in the classroom. Adequate time alone is a necessary but insufficient condition for maximal learning to occur. *Time and Learning in the Special Education Classroom* strikes a balance between research and application to achieve a scholarly yet readable text, relevant for both pre-service and in-service teachers, supervisors, principals, administrators, and teacher educators.

Transforming Schools Using Project-Based Learning, Performance Assessment, and Common Core Standards Aug 18 2021 It's not what students know, but what they do with what they know that is important. Schools are changing in response to this reality, and in *Transforming Schools Using Project-Based Learning, Performance Assessment, and Common Core Standards*, Bob Lenz, Justin Wells, and Sally Kingston draw on the example of the Envision Education schools, as well as other leading schools around the country, to show how the concept of deeper learning can meet the need for students who are both college and career ready and engaged in their own education. In this book, the authors explain how project-based learning can blend with Common Core-aligned performance assessment for deeper learning. You'll discover how many schools have successfully made the transition from traditional, teacher-centered learning to project-based, deeper learning and find many practical ideas for implementation. Companion DVD and website include videos showing how to implement deeper learning strategies in the classroom. Evidence-based descriptions show why deeper learning is right for students. Performance assessment experts explain how to align assessments with Common Core by shifting the emphasis from knowing to doing. Extensive game plan section provides step-by-step guidance for change. Schools are complex organizations, and transformation involves all of the stakeholders, from students to superintendents. But as this book shows, there are amazing benefits to be realized when everyone commits to diving deeper into learning.

Mastery Jan 29 2020 'Machiavelli has a new rival, and Sun-tzu had better watch his back' - New York Times Around the globe, people are facing the same problem - that we are born as individuals but are forced to conform to the rules of society if we want to succeed. To see our uniqueness expressed in our achievements, we must first learn the rules - and then how to change them completely. Charles Darwin began as an underachieving schoolboy, Leonardo da Vinci as an illegitimate outcast. The secret of their eventual greatness lies in a 'rigorous apprenticeship': by paying close and careful attention, they learnt to master the 'hidden codes' which determine ultimate success or failure. Then, they rewrote the rules as a reflection of their own individuality, blasting previous patterns of achievement open from within. Told through Robert Greene's signature blend of historical anecdote and psychological insight and drawing on interviews with world leaders, Mastery builds on the strategies outlined in The 48 Laws of Power to provide a practical guide to greatness - and how to start living by your own rules. From the internationally bestselling author of The 48 Laws of Power, The Art Of Seduction, and The 33 Strategies Of War.

The Subtle Side of Teaching Mar 01 2020 Training, placing, and retaining highly qualified teachers in our nation's schools has become a very serious challenge in the 21st century. Many factors contribute to teachers' relative levels of satisfaction, or dissatisfaction, with their careers. Some of these factors are rather obvious and tangible; others are not. Many teachers fade, sometimes rather quickly, from unmet personal expectations, overwhelming external requirements, and subsequent "running out of gas." Some of the very simplest things in a teacher's day can have the most dramatic effect on their passion for their work. To keep teachers fully satisfied in their positions, they need to enjoy what they do daily; to enjoy what they do daily, they must approach their work inspired. *The Subtle Side of Teaching* offers 79 short essays with examples and applications to a variety of school subjects, pointing teachers toward fundamental guidelines for sustained energy, clear thinking, and a positive outlook in the classroom.

Issues in Syllabus Design Oct 27 2019 *Issues in Syllabus Design* addresses the major types of syllabuses in language course development and provides readers with the theoretical foundations and practical aspects of implementing syllabuses for use in language teaching programs.

Raising Black Students' Achievement Through Culturally Responsive Teaching Jul 29 2022 In this book, Johnnie McKinley presents the results of her in-depth study of a group of teachers in grades 3 thru 8 who managed to radically narrow the achievement gap between their

black and white students by using a set of culturally responsive strategies in their classrooms. McKinley uses the educators' own words and illustrative "virtual walkthroughs" of lessons in action to examine these strategies in detail. In addition, the book includes * An overview of the research literature on effective responses to the achievement gap; * Instructions for conducting classroom walkthroughs, including a series of feedback forms that teachers can use to conduct walkthroughs in their schools; and * A comprehensive guide to the author's Teaming for Culturally Responsive Classrooms (TCRC) model—an innovative multistep framework for assessing the cultural responsiveness of teaching strategies in schools. Educators have been struggling for decades to remedy the disparity in academic outcomes between black and white students. This book shows how one remarkable group of teachers harnessed the power of culturally responsive teaching to do just that. By following the path outlined in *Raising Black Students' Achievement Through Culturally Responsive Teaching*, you too can help your black students to become engaged, self-confident, and successful learners.

Service-eLearning Mar 25 2022 This edited collection, the first of its kind, marries the two fastest-growing movements in higher education: service-learning and eLearning. While these two innovative pedagogies are widely assumed to be incompatible, this collection highlights their complementary approaches as a new teaching method for 21st Century learners. The collection offers a new pedagogical model—service-service eLearning—defined as an integrative pedagogy that engages learners through technology in civic inquiry, service, reflection, and action. Service-learning is an “academically rigorous instructional method that incorporates meaningful community service into the curriculum. Focusing on critical, reflective thinking and civic responsibility, servicelearning involves students in organized community service that addresses local needs, while developing their academic skills, respect for others, and commitment to the common good” (DiPadova-Stocks, 2006). At the same time, distance education has grown from paper-based correspondence courses to highly interactive and dynamic pedagogies that incorporate online technologies to ensure rapid and meaningful interaction between geographically-dispersed faculty and students. The goal of this edited collection is to consider how these two educational innovations have and can combine to further encourage civic engagement while meeting the demands of an increasingly global, competitive, and diverse educational marketplace. This edited collection, the first of its kind, defines and addresses the emergent blending of service learning and eLearning to create a new integrated pedagogical model: service-eLearning. *Service-eLearning: Educating for Citizenship* starts a conversation about the marriage of two powerful educational innovations. While readers of this collection may be familiar with

existing work on service-learning and technology use, this book demonstrates the potential of a new model which acknowledges eLearning as a pedagogy within its own right. The new model presented here blends eLearning pedagogy with existing approaches to service-learning. The result is an integrated pedagogical approach: Service eLearning. As the work presented herein highlights, service-eLearning responds to the challenges of today's rapidly-changing, technology-mediated reality.

Expertise in Every Classroom May 15 2021 Expertise in every classroom should be the norm, not the exception. We have all had that magical teacher, who we remember years later. We remember how this teacher made us believe we could do anything. The mythical experts exist and have much to teach us in our quest to build a powerhouse education system. Unfortunately, forty years of research and over 25 years of reform models have led to few changes in the teaching profession and in the overall outcomes in education. Both national and international research demonstrates expertise in teaching can be clearly defined and developed. Countries around the world have successfully revamped their systems to develop and support expert teachers. While we grapple with failed value-added models and are beginning to understand linkage to single achievement test scores leaves out the impact teachers have upon the students, peers, and the culture as a whole. We have erected barriers in the form of scripted curricula, overuse of testing, and failed professional development models. Yet some teachers overcome all the barriers and develop expertise. These teachers find avenues of development either in small pockets of peers or individually. While other countries are developing experts in mass numbers, the United States is creating such teachers in very, small pockets. Examining the thinking processes and practice of these teachers offers a glimpse into what we should desire in every classroom in every school. This book bridges both research and practical elements. We believe expert teachers desire both. We often discuss the disconnect between research and practice. This book is intended to bridge both academic expectations and practitioner expectations. We believe the academic community must make research accessible and user-friendly to practitioners and practitioners should be at the forefront of research discussions. We must blend the ivory towers of academia with the daily work in our schools if we are to create world class systems. Expert teachers are both academic researchers and critical practitioners. Reform movements are showing little progress. We need to redefine the profession.

Issues and Challenges in Science Education Research Feb 09 2021 In contemporary society, science constitutes a significant part of human

life in that it impacts on how people experience and understand the world and themselves. The rapid advances in science and technology, newly established societal and cultural norms and values, and changes in the climate and environment, as well as, the depletion of natural resources all greatly impact the lives of children and youths, and hence their ways of learning, viewing the world, experiencing phenomena around them and interacting with others. These changes challenge science educators to rethink the epistemology and pedagogy in science classrooms today as the practice of science education needs to be proactive and relevant to students and prepare them for life in the present and in the future. Featuring contributions from highly experienced and celebrated science educators, as well as research perspectives from Europe, the USA, Asia and Australia, this book addresses theoretical and practical examples in science education that, on the one hand, plays a key role in our understanding of the world, and yet, paradoxically, now acknowledges a growing number of uncertainties of knowledge about the world. The material is in four sections that cover the learning and teaching of science from science literacy to multiple representations; science teacher education; the use of innovations and new technologies in science teaching and learning; and science learning in informal settings including outdoor environmental learning activities. Acknowledging the issues and challenges in science education, this book hopes to generate collaborative discussions among scholars, researchers, and educators to develop critical and creative ways of science teaching to improve and enrich the lives of our children and youths.

ISD from the Ground Up, 4th Edition Oct 20 2021 Don't leave course design to trial and error. Is trial and error a key pathway to instructional systems design (ISD)? Does success come only to experienced designers with expert instincts? Prior to the 2000 publication of *ISD From the Ground Up*, it certainly appeared that way to instructional designers just learning the ropes. Chuck Hodell set out to change that. Known as "the man who wrote the book on ISD—literally," Hodell developed a comprehensive and practical handbook on core ISD practices and principles with a practitioner's eye. His definitive guide is an industry staple currently found on the bookshelves of experienced instructional designers and university students alike. This updated fourth edition covers all the basics and many advanced tenets important to working professionals, especially those entering the field. Stand-alone chapters offer crucial support to practitioners building foundational skills, while in-depth tutorials and rich insights guide the credentialed designer. At a time when skillful curriculum development is valued more than ever, *ISD From the Ground Up* offers a refresher on objectives, design plans, lesson plans, and even what it takes to facilitate a focus group. Updated with new chapters and an expanded glossary of terms, it delves into skills and practices essential to the success of today's in-demand curriculum developer.

Immersion Education Jul 05 2020 Within bilingual education, more and more programs are adopting the option of immersion education, in which a second language is used as the medium of instruction. This volume illustrates the implementation immersion education in North America, Europe, Asia, the Pacific, and Africa, showing its use in programs ranging from preprimary to tertiary level and demonstrating how it can function in foreign language teaching, for teaching a minority language to members of the language majority, for reviving or supporting languages at risk of extinction, and for helping learners acquire a language needed for wider communication or career advancement. A final section reviews lessons learned from experiences with immersion and explores new directions the approach is taking. This text will be of interest to teachers, teacher educators, and others involved in bilingual education.

multiple cultural perspectives has become critically important in educating the next generation of college students. Education experts from around the world share their perspectives on college and university teaching, illuminating international differences and similarities. The chapters are organized around a model developed by James Groccia, which focuses on seven interrelated variables, including teacher, learner, learning process, learning context, course content, instructional processes, and learning outcomes. Using this logical model as the organizational structure of the book provides a guide for systemic thinking about what actions one should take, or suggest others take, when planning activities to improve teaching and learning, curriculum development, and assessment.
