Inside Accounting Jul 07 2020 Based on a study covering a one-year financial reporting cycle at a commercial subsidiary of a well-known scientific research organization, Inside Accounting examines how accountants and non-accounting managers construct their company's earnings. Addressing issues in both internal management accounting, such as budgeting, performance evaluation, and control, as well as external financial accounting, such as book keeping, monthly/year end accounts and auditing, David Leung focuses on how people classify transactions, make professional judgments and use computer software for accounting, and prepare for and facilitate the auditing process. He also looks at accountancy training and the impact of people's affiliations to the accounting profession or other professions on their accounting and on their perceptions of financial statements. Other contingent or contextual factors that influence the choice of accounting method, such as time pressure, reward structures, management authority and

institutions are also considered. David Leung's research employs an innovative blend of theory and practice that redresses the imbalance between ethnographic studies of financial accounting, and management accounting and helps close the gap between the academic curriculum and the experiences of practitioners. His research leads the author to conclude that no act of accounting classification is ever indefeasibly correct; that the accounting community's institutions and authority are central to the accounting process and to the 'truth and fairness' of accounting numbers; that accounting training involves extensive use of learning by doing; and that both accountants and non-accounting managers have goals and interests that often result in no better than 'good enough' accounting. This book will appeal to accounting and finance professionals and academics in finance, as well as to sociologists and academic researchers interested in research methods and science studies.

Financial Accounting Apr 15 2021 This book will appeal to individuals interested in developing their knowledge in financial accounting, including students sitting the Edexcel London exams, entrepreneurs and managers. Financial Accounting and Equity Markets Sep 08 2020 Philip Brown is one of the most admired and respected accounting academics alive today. He was a pioneer in capital markets research in accounting, and his 1968 article, co-authored with Ray Ball, "An Empirical Evaluation of Accounting Income Numbers," arguably had a greater impact on the course of accounting research, directly and indirectly, than any other article during the second half of the twentieth century. Since that time, his innovative research has focused on issues that bridge accounting and finance, including the relationships between net profit reports and the stock market, the long-run performance of acquiring firms, statutory sanctions and voluntary corporate disclosure, and the politics and future of national accounting standards to name a few. This volume brings together the greatest hits of Brown's career, including several articles that were published in out-of-the-way places, for easier use by students and researchers in the field. With a foreword written by Stephen A. Zeff, and an introduction that discusses the evolution of Brown's research interests and explains the context for each of the essays included in the volume, this book offers the reader a unique look inside this remarkable 50-year career.

Intangible Values in Financial Accounting and Reporting Feb 23 2022 Academics and practitioners argue that intangible values have become significant value drivers of today's economy. Major production inputs no longer comprise of property, plant and equipment, but rather of brands, knowledge and other technological innovation. Based on this notion, information on such phenomena is supposedly crucial for existing and potential capital providers in making decisions whether to allocate resources to a company. This thesis examines the information use and needs of financial analysts with respect to intangible values. The purpose is to shed light on the usefulness of such information from the perspective of one of the primary user groups of IFRSs.

Introduction to Financial Accounting Dec 24

2021 This textbook, originally by D. Annand and H. Dauderis, was intended for a first course in introductory financial accounting. It focuses on core introductory financial accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. A corporate approach is utilized versus beginning with a sole proprietorship emphasis and then converting to a corporate approach; this consistency throughout the book reduces confusion for the introductory student. This most recent revision by D. Marchand converted the text from IFRS to reflect the Generally Accepted Accounting Principles of the United States (U.S. GAAP).
