Pervasive Computing Nov 27 2019 This volume contains the proceedings of Pervasive 2002, the ?rst in a series of international conferences on Pervasive Computing. The conference took place at ETH Zurich from August 26 to 28, 2002. Its objective was to present, discuss, and explore the latest technical developments in the emerging ?eld of pervasive computing, as well as potential future directions. Pervasive Computing is a cross-disciplinary area that extends the appli- tion of computing to diverse usage models. It covers a broad set of research topics such as low power, integrated technologies, embedded systems, mobile - vices, wireless and mobile networking, middleware, applications, user interfaces, security, and

privacy. The great amount of interest we are witnessing in Per- sive Computing is driven by relentless progress in basic information technologies such as microprocessors, memory chips, integrated sensors, storage devices, and wireless communication systems that continue to enable ever smaller, lighter, and faster systems. Such systems are also becoming a?ordable due to their high integration and mass production, paving the way for their adoption.

Good Quality Practice (GQP) in Pharmaceutical Manufacturing: A Handbook Oct 19 2021 Pharmaceutical manufacturing can be viewed as a supply chain which spans from the production and purchase of the starting and packaging materials through the manufacture of dosage forms until the safe reception of the finished product by the patient. The entire chain comprises of several processes: auditing, materials purchase (procurement), production, storage, distribution, quality control, and quality assurance. The quality standard for pharmaceutical production is 'current good manufacturing practice (CGMP)', which is applied within the frame of a pharmaceutical quality system (PQS). This implementation, however, requires a scientific approach and has to take into account several elements such as risk assessment, life cycle, patient protection, among other factors. Hence, pharmaceutical manufacturing is a complex subject in terms of regulation, given the technical and managerial requirements. This comprehensive handbook describes CGMP for new professionals who want to understand and apply the elements which build up pharmaceutical quality assurance. The book gives details about basic quality control requirements (such as risk management, quality hazards and management systems, documentation, clean environments, personnel training) and gives guidelines on regulatory aspects. This is an ideal handbook for undergraduates studying pharmaceutical or industrial manufacturing and supply chains as well for entrepreneurs and quality control professionals seeking to learn about CGMP standards and implementing quality assurance systems in the pharmaceutical sector.

The Internet for Surgeons Nov 07 2020 Advances in surgery have reached an exponential scale, and the changes of the last decade of the twentieth century have become common prac tice. Imagination and foresight are the more visible standards for profes sional appointments than ever before. The fiber optic cable, computer, and Internet are the workhorses of this sea-change, and surgeons must master all of them to remain intellectually and technically up-to-date. There can be no better explanation for the genuine need for this book. The transmission of knowledge and technical skills from one generation to another has been a common practice in surgery for nearly 200 years. Past experiences of surgeons have focused upon an understanding of disease states, a prompt diagnosis of a correctable illness and its appropriate evalu ation, and most importantly, the technical conduct of an operation, where indicated, to provide relief to and/or cure of the patient. Fascinatingly, this little book tends to fulfill that same role with respect to the newly emerged technology of the Internet, computation, and telemedicine. In essence, this book seeks, and to a remarkable degree, achieves the transmission of both knowledge and technical skill in an easily usable and clearly written format. Jeff W. Allen has provided an educational orientation with which he is familiar, both as a recent pupil and now as a teacher of surgical proce dures. This is not unlike the kind of education that has gone on between trainee surgeons and master surgeons around the world. In this case, Dr.

Shell and Spatial Structures: Computational Aspects Jun 14 2021 In recent years powerful engineering workstations for a reasonable price become a valuable tool for the design of complicated constructions such as shell and spatial structures. This availability causes an increasing use of advanced numerical techniques for the static and dynamic analysis of these structures, also in the non-linear range. The I.A.S.S. Working Group nO 13 concerned with "Numerical Methods in Shell and Spatial Structures" and the Department of Civil Engineering of the Katholieke Universiteit Leuven have taken the initiative to organise an International Symposium, providing a forum for discussion and exchange of views between researchers, specialists in numerical analysis on one hand and designers, practising engineer ings on the other hand. These Proceedings contain the papers presented at the Symposium, held in Leuven, July 14-16 1986. The papers are organised in five sections 1. Shell structures 2. Spatial structures 3. Dynamic analysis 4. Non-linear analysis 5. Presentation and interpretation of results The papers covering more than one domain are classified following the main subject. We hope that researchers as well as practising engineers will find a lot of useful information in the book.

Maps and the Internet Dec 09 2020 This book examines a new trend affecting cartography and geographic information science. Presenting the work of over 30 authors from 16 different countries, the book provides an overview of current research in the new area of Internet Cartography. Chapters deal with the growth of this form of map distribution, uses in education, privacy issues, and technical aspects from the point of view of the map provider - including Internet protocols such as XML and SVG. Many see the Internet as a revolution for cartography. Previously tied to the medium of paper and expensive large-format color print technology, maps had a limited distribution and use. The Internet made it possible to not only distribute maps to a much larger audience but also to incorporate interaction and animation in the display. Maps have also become timelier with some maps of traffic and weather being updated every few minutes. In addition, it is now possible to access maps from servers throughout the world. Finally, the Internet has made historic maps available for viewing to the public that were previously only available in map libraries with limited access.

Information and Communication Technology for Development Jan 28 2020 The role of information and communication technology (ICT) in an increasingly interconnected and interdependent world transcends geographical boundaries, economies, and sectors. Over the past decade, ICT has helped create the most rapidly growing industry sectors, driven efficiency in government and business operations, and developed the essential building blocks to a knowledge-based economy. The ability of ICT to change the way people do things is either hidden in internal processes--such as how a government office manages data collection---or manifest in the end product---such as digital support for health care services in a remote province. While the level and nature of the benefits of ICT may differ for every stakeholder, there is a consensus of what ICT can help provide to governments, businesses, and citizens: faster access to relevant information, an efficient means for communication, an enhanced ability to make informed decisions, and a voice to otherwise unheard peoples. As these cases from the Asian Development Bank would show, access to ICT alone will not result in significant, lasting change. It is the adoption of appropriate technology, paralleled with an enabling policy environment, a responsive and needs-based approach, improved individual and institutional capacity, nurtured partnerships with key stakeholders, leadership by local champions, effectively managed change, and sustained support that make the difference.
