Sedimentation and Tectonics in Rift Basins Red Sea:- Gulf of Aden Feb 21 2022 Sedimentation and Tectonics in Rift Basins: Red Sea - Gulf of Aden presents new case studies and synthesises the results of recent research on the sedimentological evolution of the Red Sea - Gulf of Aden rift system. This rift basin is generally regarded as the best natural geological laboratory in the world in which to study the processes of rift formation. Uplift of the rift margins in an arid climate results in extensive three-dimensional exposures of pre- and syn-rift strata and associated structures. These serve as analogues for the understanding and hydrocarbon exploration of deeper buried rift-systems on continental margins such as the North Sea and the Atlantic margins. The Red

Sea - Gulf of Aden rift is also exceptional in that its stratigraphy spans all stages from pre-rift environments, syn-rift continental to marine environments through the rift to drift transition to post-rift sea-floor spreading. The work is arranged in eight sections: following a review of the sedimentology and stratigraphy of rift basins, the magmatism and structural evolution of the Red Sea - Gulf of Aden rift is reviewed. Subsequently, new case studies are presented of the early rifting environment, syn-rift sedimentation, tectonics and diagenesis, evaporites and salt tectonics. Post-rift sediments of the axial trough are then discussed along with studies of reefs, coastal zone and shelf sediments, and the tectonic geomorphology of the rift margin escarpment. This work results from extensive new research in the rift basin

largely carried out under collaborative research projects by European and Middle Eastern geologists. It will be an invaluable reference work for geoscientists in the hydrocarbon, groundwater and mineral extraction industries, as well as for researchers in university departments of earth sciences, mining and physical geography.

Proceedings of the 5th International Symposium on Asphalt Pavements & Environment (APE) Nov 20 2021 This volume highlights the latest advances, innovations, and applications in the field of asphalt pavement technology, as presented by leading international researchers and engineers at the 5th International Symposium on Asphalt Pavements & Environment (ISAP 2019 APE Symposium), held in Padua, Italy on September 11-13, 2019. It covers a diverse range of topics concerning materials and technologies for asphalt pavements, designed for sustainability and environmental compatibility: sustainable

pavement materials, marginal materials for asphalt pavements, pavement structures, testing methods and performance, maintenance and management methods, urban heat island mitigation, energy harvesting, and Life Cycle Assessment. The contributions, which were selected by means of a rigorous international peer-review process, present a wealth of exciting ideas that will open novel research directions and foster multidisciplinary collaboration among different specialists.

Austenitic TRIP/TWIP Steels and Steel-Zirconia Composites Aug 06 2020 This open access book presents a collection of the most up-to-date research results in the field of steel development with a focus on pioneering alloy concepts that result in previously unattainable materials properties. Specifically, it gives a detailed overview of the marriage of high-performance steels of the highest strength and form-ability with damage-tolerant zirconia ceramics by innovative manufacturing

technologies, thereby yielding a new class of high-performance composite materials. This book describes how new high-alloy stainless TRIP/TWIP steels (TRIP: TRansformation-Induced Plasticity, TWIP: TWinning-induced Plasticity) are combined with zirconium dioxide ceramics in powder metallurgical routes and via melt infiltration to form novel TRIP-matrix composites. This work also provides a timely perspective on new compact and damage-tolerant composite materials, filigree light-weight structures as well as gradient materials, and a close understanding of the mechanisms of the phase transformations. With a detailed application analysis of state-of-the-art methods in spatial and temporal high-resolution structural analysis, in combination with advanced simulation and modelling, this edited volume is ideal for researchers and engineers working in modern steel development, as well as for graduate students of metallurgy and materials science and engineering.

Islam in Bangladesh Mar 25 2022 This study, done within the comprehensive Weberian framework, focuses on religion and social change in Bangladesh through an imaginative use of qualitative as well as quantitative methods of modern social research. It first provides a sociological interpretation of the origin and development of Islam in Bengal using historical and literary works on Bengal. The main contribution is based on two sample surveys conducted by Mrs. Banu in 20 villages of Bangladesh and in three areas in the metropolitan Dhaka city. Using these survey data, she gives a sociological analysis of Islamic religious beliefs and practices in contemporary Bangladesh, and more importantly, she studies the impact of the Islamic religious beliefs on the socio-economic development and political culture in present-day Bangladesh. She also shows how Islam compares with modern education in social 'transforming capacity'. This careful and rigorous work is a notable

performs many important functions including defence against disease and transport of biomolecules, but perhaps the most important is to carry oxygen - the fundamental biochemical fuel - and other blood gases around the cardiovascular system. Traditional therapies for the impairment of this function, or the rapid replacement of lost blood, have centred around blood transfusions. However scientists are developing chemicals (oxygen therapeutics, or "blood substitutes") which have the same oxygen-carrying capability as blood and can be used as replacements for blood transfusion or to treat diseases where oxygen transport is impaired. Blood links the underlying biochemical principles of the field with chemical and biotechnological innovations and pre-clinical development. The first part of the book deals with the chemistry, biochemistry, physiology and toxicity of oxygen, including chapters on hemoglobin reactivity and regulation; the major cellular and physiological control mechanisms of blood flow and oxygen delivery; hemoglobin and myoglobin; nitric oxide and oxygen; and the role of reactive oxygen and nitrogen species in ischemia/reperfusion Injury. The book then discusses medical needs for oxygen supply, including acute traumatic hemorrhage and anemia; diagnosis and treatment of haemorrhages in "non-surgical" patients; management of perioperative bleeding; oxygenation in the preterm neonate; ischemia normobaric and hyperbaric oxygen therapy for ischemic stroke and other neurological conditions; and transfusion therapy in β thalassemia and sickle cell disease Finally

“old” and new strategies for oxygen supply are described. These include the political, administrative and logistic issues surrounding transfusion; conscientious objection in patient blood management; causes and consequences of red cell incompatibility; biochemistry of red blood cell storage; proteomic investigations on stored red blood cells; red blood cells from stem cells; the universal red blood cell; allosteric effectors of hemoglobin; hemoglobin-based oxygen carriers; oxygen delivery by natural and artificial oxygen carriers; cross-linked and polymerized hemoglobins as potential blood substitutes; design of novel pegylated hemoglobins as oxygen carrying plasma expanders; hb octamers by introduction of surface cysteines; hemoglobin-vesicles as a cellular type hemoglobin-based oxygen carrier; animal models and oxidative biomarkers to evaluate pre-clinical safety of extracellular hemoglobins; and academia - industry collaboration in blood substitute development.

Internationally acclaimed experts have chosen what they consider to be the most important papers in their respective subspecialties. Each entry follows a set format, starting with the abstract and the reference to the original source of publication. This is followed by analysis of the strengths and weaknesses of the paper and the contribution it has made to the development of critical care. Additional information including citation score of each paper is given together with detailed analysis of the top 500 most widely cited papers.

Akbarzadeh and Saeed explore one of the most challenging issues facing the Muslim world: the Islamisation of political power. They present a comparative analysis of Muslim societies in West, South, Central and South East Asia and highlight the immediacy of the challenge for the political leadership in those societies. Islam and Political Legitimacy contends that the growing reliance on Islamic symbolism across the Muslim world, even in states that have had a strained relationship with Islam, has contributed to the

The geographic breadth of this book offers readers a nuanced appraisal of political Islam that transcends parochial eccentricities. Contributors to this volume examine the evolving relationship between Islam and political power in Bangladesh, Indonesia, Iran, Malaysia, Pakistan, Saudi Arabia and Uzbekistan. Researchers and students of political Islam and radicalism in the Muslim world will find Islam and Political Legitimacy of special interest. This is a welcome addition to the rich literature on the politics of the contemporary Muslim world.

attention, especially in the US, UK and Australia. The book presents a model and a new way of thinking applied to vascular access and administration of intravenous treatment, and shows how establishing and maintaining a route of access to the bloodstream is essential for patients in acute care today. Until now, little thought has been given to an intentional process to guide selection, insertion and management of vascular access devices (VADs) and by default actions are based on crisis management when a quickly selected VAD fails. The book details how VHP establishes a framework or pathway model for each step of the patient experience, intentionally guiding, improving and eliminating risk when possible. The evidence points to the fact that reducing fragmentation, establishing a pathway, and teaching the process to all stakeholders reduces complications with intravenous therapy, improves efficiency and diminishes cost. As such this book appeals to bedside nurses, physicians and other health

[Assessment of Groundwater Resources and Management](#) May 27 2022 The hydrogeological aspect of groundwater science is universal and applied in nature to have a sustainable water resource development with social, economic, ecological, cultural and aesthetic background. Since 99% of the world's fresh available water is groundwater; yet, the majority of financial resources are directed to surface water found in rivers and lakes. This serious imbalance requires urgent redress. This volume addresses the issue to facilitate the joint analysis of groundwater management studies and problems faced by scientist, engineers, managers and other scholars from natural and applied sciences. Significant financial support is required for basic groundwater research if sustainable development is to be a realistic goal. As a fresh water resource, groundwater has major advantages over surface water. This is the basic idea that explicitly appears in almost all

developed. Defects on planar surfaces form the focus of much of the book, although the investigation of powder samples also form an important part. The experimental study of planar surfaces opens the possibility of applying the large armoury of techniques that have been developed over the last half-century to study surfaces in ultra-high vacuum. This enables the acquisition of atomic level data under well-controlled conditions, providing a stringent test of theoretical methods. The latter can then be more reliably applied to systems such as nanoparticles for which accurate methods of characterization of structure and electronic properties have yet to be developed. The book gives guidance to tailor oxide surfaces by controlling the nature and concentration of defects. The importance of defects in the physics and chemistry of metal oxide surfaces is presented in this book together with the prominent role of oxides in common life. The book contains contributions from leaders in the

innovative work offers the first comprehensive transcultural history of historiography. The contributors transcend a Eurocentric approach not only in terms of the individual historiographies they assess, but also in the methodologies they use for comparative analysis. Moving beyond the traditional national focus of historiography, the book offers a genuinely comparative consideration of the commonalities and differences in writing history. Distinguishing among distinct cultural identities, the contributors consider the ways and means of intellectual transfers and assess the strength of local historiographical traditions as they are challenged from outside. The essays explore the question of the utility and the limits of conceptions of modernism that apply Western theories of development to non-Western cultures. Warning against the dominant tendency in recent historiographies of non-Western societies to define these predominantly in relation to Western thought, the authors show

the extent to which indigenous traditions have been overlooked. The key question is how the triad of industrialization, modernization, and the historicization process, which was decisive in the development of modern academic historiography, also is valid beyond Europe. Illustrating just how deeply suffused history writing is with European models, the book offers a broad theoretical platform for exploring the value and necessity of a world historiography beyond Eurocentrism.

Microcirculatory Effects of Hemoglobin

Solutions Mar 13 2021 Solutions of stroma-free hemoglobin have been investigated for their potential as blood replacement fluids for more than 70 years. Despite many attempts to overcome their unwanted side effects through chemical modification of the hemoglobin molecule, none of the potential solutions has been approved for clinical use in Europe or the United States. In recent years, the vasoconstrictive activity of hemoglobin in the plasma was identified as the pivotal problem of hemoglobin-based blood substitutes, compromising nutritional perfusion and thus impeding oxygen unloading at the site of the

microcirculation. One of the prevailing assumptions is that the precapillary vasoconstriction and the ensuing tissue underperfusion is caused by the high affinity of free hemoglobin for nitric oxide. To resolve this problem, a number of recombinant techniques involving site-directed mutagenesis as well as several chemical approaches involving polymerization and pegylation have been developed. This volume summarizes the latest research on the effects of some of these new hemoglobin solutions on the microvasculature and tissue oxygenation. It is recommended reading for all those interested in finding alternatives for donor blood in transfusion medicine, including emergency specialists, anesthesiologists, surgeons, trauma surgeons and other clinicians who are frequently confronted with blood loss and the need for blood replacement.

capabilities in the care of patients. Our science is strong. Molecular biology is powerful, but our therapy to help patients is weaker and more limited. For this reason, this book focuses on the problems of multiple organ failure (MOF), multiple organ dysfunction syndrome (MODS), and systemic inflammatory response syndrome is, patients who have severe injuries; require major, (SIRS) in high-risk patients, that overwhelming operations; or have serious illnesses requiring intensive care; patients who have diseases elsewhere, in other organs or systems, that limit their capabilities to survive a new insult; and patients who are elderly or at high risk for sepsis or other complications. These are the patients who need our help. They need the advances in science, in molecular biology, immunology, pathophysiology, biochemistry, genetics, high technology, and other areas of maximum support at the bedside. These advances could potentially have the greatest impact on improving patient care.

and students of the subcontinent. During the nineteenth century polemical religious literature and those who wrote it mobilized groups and led them back to the "fundamentals." Sacred texts supporting movements were translated and made available in inexpensive editions. Even texts from the well established oral tradition were put into print. This process was often initiated in response to Christian missionary activity, a response that ultimately expanded to include other religions. In this book, scholars examine the writings of Hindus, Muslims, and Sikhs responsible for significant changes within different communities and for a heightened sense of boundary-defining identity.

clash between Hindus and Muslims that continues to polarize India. Based on a thorough review of Indian history during the 19th and 20th centuries, Ahmad challenges both popularly held viewpoints regarding the nature of this conflict. His analysis of the emergence of the Muslim consciousness demonstrates how both selectivism and assimilation, rather than simply intrinsic differences and cultural conditions, have hallmarked this schism. India's struggle for identity is explained in terms of the interaction of religious, social, cultural, and global factors, and this wide perspective can hopefully illuminate the causes of similar conflicts throughout the former colonial world.
