Family Medicine Mar 16 2021 JOHN S. MILLIS In 1966 the Citizens Commission on Graduate Medical Education observed that the explosive growth in biomedical science and the consequent increase in medical skill and technology of the twentieth century had made it possible for physicians to respond to the episodes of illness of patients with an ever-increasing effectiveness, but that the increase in knowledge and technology had forced most physicians to concentrate upon a disease entity, an organ or organ system, or a particular mode of diagnosis or therapy. As a result there had been a growing lack of continuing and comprehensive patient care. The Commission expressed the opinion that "Now, in order to bring medicine's enhanced diagnostic and therapeutic powers fully to the benefit of society, it is necessary to have many physicians who can put medicine together again. " The Commission proceeded to recommend the education and training of substantial numbers of Primary Physicians who would, by assuming primary responsibility for the patient's welfare in sickness and in health, provide continuing and comprehensive health care to the citizens of the United States. In 1978 it is clear that the recommendation has been accepted by the public, the medical profession, and medical education. There has been a vigorous response in the development of family medicine and in the fields of internal medicine, pediatrics, and obstetrics. One is particularly impressed by the wide acceptance on the part of medical students of the concept of the primary physician. Dr. John S.

Using the author acclaimed "Four Box Method" and numerous illustrative case examples, this book enables practitioners to gain a better understanding of the complexities involved in ethical cases and demonstrates how to reach resolution to ethical problems. Clinical Ethics goes beyond theory to offer a decision-making strategy applicable to real-world practice. The case examples have been selected to demonstrate how principles apply to real-world everyday practice. The co-authors, a bioethicist, a physician and a lawyer/ psychoanalyst /philosopher, draw on more than forty years respectively of clinical experience to select exemplary cases of ethical problems and to reflect on how moral principles and concepts can guide clinicians in formulating ethically appropriate recommendations for patient care. The clinical situations that generate ethical problems are then described and illustrated by clinically realistic medical cases. A short distillation of current opinion from the bioethical literature is provided, followed by an analysis of the cases.. The authors conclude with recommendations that the three authors have formulated from their extensive experience as bioethics consultants.
