Evacuee Cinema May 27 2022

This new history of partition and South Asian cinema is narrated through the careers of émigré film personnel, as well as through the distinctive genres and ancillary ventures that accompanied the aftershocks of partition.

Moving beyond arguments about social contingency and political intent, the book suggests that the creative energies, production and subsequent circulation of popular cinema can offer fresh insights into partition. Pointing to regional connections across national boundaries, this book asserts that the cinemas of India and Pakistan must be explored in tandem to uncover the legacy of partition for the culture industries of the region, ~~one that is still the~~

national erasures. The leitmotifs of émigré personnel, gossip and satire in film print culture, the partisan repertoire of a theatre company, the film genres of the Muslim social, romantic comedies and charba (remakes), and the unruly film archives of postcolonial nation-states, when accessed through the lens of a divisive decolonization, reveal the parallaxes and confabulations of the 'national' on both sides.

or semiconductors, magnetoresistant, they are used in numerous devices, they present hundreds of variants and different crystalline phases and phase transitions, and recently appeared as probably the most promising materials for photovoltaics. With a crystal structure characterized by octahedra that share their corners, these materials belong to the wider category of « Framework Structure (FWS) materials » the structure of which is based on units (octahedra, tetrahedra, ...) that share some of their corners (or edges) with their neighbours. This particular feature of FWS materials confers to them unique properties. This review volume is constituted of 26 chapters on different aspects, and is divided in two parts, « Fundamental aspects and general properties », and « Elaborated materials and applied properties ». Its main purpose is to attempt to identify the properties common to all members of the vast family of FWS materials, and understand their differences.

Besides perovskites, derived compounds as 2D perovskites, Dion-Jacobson, Ruddlesden-Popper, Aurivillius, tungsten-bronzes, and others, are presented, and their preparation and/or properties as single crystals, ceramics, thin films, multilayers, nanomaterials, nanofibers, nanorods, etc, are discussed. We focus on new trends and important recent developments by leaving somewhat aside more classical aspects which can be easily found in older textbooks or review articles. Among most recent applications, this volume focuses on applications related with interactions with other molecules, on photovoltaics, and on memories, with a special attention to perovskite solar cells that have certainly attracted the most attention of researchers in recent years, opening extremely promising routes in photovoltaics. In conclusion, this book presents a collection of texts elucidating various aspects of the relation between structural organization (including

dynamical aspects) and singular properties of framework crystals; it proposes a reasonable balance between experimental and theoretical results, and between fundamental aspects and applied properties. This volume can be approached on several levels (each chapter initially assumes that the reader is not a specialist in the subject, and is presented in a pedagogical way) : it is accessible to master or doctoral students, as well as to researchers who want to have informations on recent developments, who will find excellent detailed introductions up to hot subjects. It may also be used by undergraduate students who should approach given subjects. The volume contains 800 pages written by about 70 authors from different countries, it has an index, and is completed by numerous figures to illustrate the text.

position in several high-tech areas. Such materials are not being classified on the basis of their origin, nature of bonding or processing techniques but are classified on the basis of the functions they can perform. This is a significant departure from the earlier schemes in which materials were described as metals, alloys, ceramics, polymers, glass materials etc. Several new processing techniques have also evolved in the recent past. Because of the diversity of materials and their functions it has become extremely difficult to obtain information from single source. Handbook of Algebra Feb 21 2022 Handbook of Algebra defines algebra as consisting of many different ideas, concepts and results. Even the nonspecialist is likely to encounter most of these, either somewhere in the literature, disguised as a definition or a theorem or to hear about them and feel the need for more information. Each chapter of the book combines some of the features of both a graduate-level textbook and a research-level survey. This book is divided into eight sections. Section 1A focuses on linear algebra and discusses such concepts as matrix functions and equations and random matrices. Section 1B cover linear dependence and discusses matroids. Section 1D focuses on fields, Galois theory, and algebraic geometry. Access Free oldredlist.iucnredlist.org on December 2, 2022 Free Download Pdf

Theory, and algebraic number theory. Section 1F tackles generalizations of fields and related objects. Section 2A focuses on category theory, including the topos theory and categorical structures. Section 2B discusses homological algebra, cohomology, and cohomological methods in algebra. Section 3A focuses on commutative rings and algebras. Finally, Section 3B focuses on associative rings and algebras. This book will be of interest to mathematicians, logicians, and computer scientists.

Khuda Buksh: The Pioneer of Life Insurance in Bangladesh Dec 10 2020

Khuda Buksh, the Pioneer of Life Insurance in Bangladesh is the story of a wizard of insurance who believed passionately in a cause and dedicated his life to it. Buksh chose to serve humanity by sparking a movement in life insurance from 1935-1973 in three countries--India, Pakistan, and Bangladesh--even during political unrest. Revealing a forgotten era in the history of Bangladesh and Pakistan, this biography showcases how Buksh worked tirelessly to establish a life insurance business while overcoming religious and cultural prejudices against the industry. Furthermore, his passion, devotion, and unique sales strategies led him to

thousands of salesmen during his career. Buksh's leadership and management style, including business practices developed in India that he introduced to his homeland, East Bengal, are a huge part of the legacy he left. When Buksh became a manager at Eastern Federal Union Insurance Company Limited (EFU), he used inventive techniques to recruit and motivate his sales force and challenge the public's negative perception of life insurance. Finally, he earned a reputation as the country's most magnetic and dynamic sales executive and the wizard of life insurance. Drawing from interviews with dozens of contemporaries as well as years of research, author Muhammad Obaidur Rahim, who is also Buksh's son, traces the roots of life insurance evaluation and development and leadership strategies that helped the industry penetrate nearly every part of society. Along the way, the readers will get a close look at Buksh's involvement in establishing regional

The Philosophy of Taxation and Public Finance Sep 30 2022 Most public finance books are texts, which are aimed at undergraduate or graduate students. They are overly technical in nature and appeal only to a narrow range of bureaucrats and academics. Books on taxation are written for tax practitioners and usually emphasize either what the law is or how to maneuver through the labyrinth of tax law to minimize taxes for clients. Philosophy books on taxation or public finance simply do not exist. The Philosophy of Taxation and Public Finance is different. written in nontechnical language and is aimed to appeal to a wide range of readers, including practitioners, academics and students in the fields of taxation, public finance, economics, law, philosophy and political science as well as general readers who are interested in learning why they are being taxed the way they are. The author addresses the major issues and topics in taxation and public finance and injects them with philosophical insights. He discusses questions such as: -What arguments have been used to justify taxation? -When is tax evasion unethical? -Are some taxes better than others? -What are the proper functions of government? -How much is enough? Rethinking Tradition in Modern Islamic Thought Jul 05 2020

Questions about the authenticity and authority of sunna have long been of central importance to the study of Islam, especially to those concerned with Islamic law. In this fascinating study, Daniel Brown traces the emergence of modern debates over sunna, focusing in particular on Egypt and Pakistan where these controversies have raged most fiercely, and assesses the implications of new approaches to the law on contemporary movements of Islamic revival. Using the case of modern Islam as a starting-point, the author considers how adherents of any great tradition deal with change.

2019 The concept of sustainable development was accepted by the world leaders in Rio de Janerio in 1992. The concept was vague and this is natural when an international consensus has to be achieved. It was also based implicitly on the dominant Western paradigm with its stress on science and technology, its stress on management of technology and the meshing of economics and ecology as the answer to the environmental crisis. Value systems were not included in the concept of sustainable development. The book studies the Eastern paradigm base on the concepts and values of Hinduism, Buddhism and Islam and suggests that for a truly global ethic the Western and Eastern paradigms need to be integrated. This can be done through the mediation of modern science easily for the best of the propriety.

compounds the difficulty of locating pertinent sources even in this age of the Internet and electronic dissemination of research results. So far there has been no single reference that could guide the interested scholar or student to the relevant publications. This book is an attempt to fill this gap. My interest in the theory of semirings began in the early sixties, when together with Bogdan W ~glorz I tried to investigate some algebraic aspects of compactifications of topological spaces, semirings of semicontinuous functions, and the general ideal theory for special semirings.

(Unfortunately, local algebraists in Poland told me at that time that there was nothing interesting in investigating semiring theory because ring theory was still being developed). However, some time later we became aware of some similar investigations having already been done. The theory of semirings has remained "my first love" ever since, and I have been interested in the

This is particularly pronounced in sub-Saharan African countries, despite the continent being the world's second largest and second most-populous continent, currently undergoing rapid economic growth. Financial constraints and unclear areas of focus when funding is available, are among the limiting factors, with the consequence being the development of inadequate policies, especially those relating to environmental protection and conservation.

With authors from the North, South, East and West of Africa, the book touches diverse applied methods and approaches to meet the pragmatic needs faced by environmental microbiologists in Africa. Also included are topics on viruses, bacteria (including cyanobacteria), and protozoa, and their importance in disease. Sustainable agriculture and aquaculture, and eco-friendly oil and hydrocarbon bioremediation and degradation approaches are highlighted. Microbial involvement in different common indoor (e.g., household kitchens, latrines, and hospitals) and outdoor settings including air, soil, and water habitats, and their resistance to commonly used antibiotics, are described.
