Improving z/OS Application Availability by Managing Planned Outages Dec 07 2020 This IBM® Redbooks® publication is intended to make System Programmers, Operators, and Availability Managers aware of the enhancements to recent releases of IBM z/OS® and its major subsystems in the area of planned outage avoidance. It is a follow-on to, rather than a replacement for, z/OS Planned Outage Avoidance Checklist, SG24-7328. Its primary objective is to bring together in one place information that is already available, but widely dispersed. It also presents a different perspective on planned outage avoidance. Most businesses care about application availability rather than the availability of a specific system. Also, a planned outage is not necessarily a bad thing, if it does not affect application availability. In fact, running for too long without an IPL or subsystem restart might have a negative impact on application availability because it impacts your ability to apply preventive service. Therefore, this book places more focus on decoupling the ability to make changes and updates to your system from IPLing or restarting your systems.

MEDINFO 2021: One World, One Health — Global Partnership for Digital Innovation Jul 22 2019
The World Health Organization defines health as “a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity”, and its constitution also asserts that health for all people is “dependent on the fullest co-operation of individuals and States”. The ongoing pandemic has highlighted the power of both healthy and unhealthy information, so while healthcare and public health services have depended upon timely and accurate data and continually updated knowledge, social media has shown how unhealthy misinformation can be spread and amplified, reinforcing existing prejudices, conspiracy theories and political biases. This book presents the proceedings of MedInfo 2021, the 18th World Congress of Medical and Health Informatics, held as a virtual event from 2-4 October 2021, with pre-recorded presentations for all accepted submissions. The theme of the conference was One World, One Health - Global Partnership for Digital Innovation and submissions were requested under 5 themes: information and knowledge management; quality, safety and outcomes; health data science; human, organizational and social aspects; and global health informatics. The Programme Committee received 352 submissions from 41 countries across all IMIA regions, and 147 full papers, 60 student papers and 79 posters were accepted for presentation after review and are included in these proceedings. Providing an overview of current work in the field over a wide range of disciplines, the book will be of interest to all those whose work involves some aspect of medical or health informatics.

Upgrade Your Curriculum Jan 20 2022 Amid a confluence of messages regarding accountability, the Common Core State Standards, teacher effectiveness, and student performance, educators everywhere are looking for ways to revitalize their curriculum design and instructional practice. **Upgrade Your Curriculum: Practical Ways to Transform Units and Engage Students** offers a solution: providing students with meaningful, relevant units of study developed by the educators who actually teach them. The authors, both curriculum experts, advocate a gradual approach to transforming curriculum in which teachers work collaboratively to upgrade one unit at a time. Drawing from a wealth of professional development experiences in schools across the United States and overseas, the authors * Address the foundational concepts involved in transforming curriculum. * Introduce their innovative transformational matrix—an essential visual reference that classifies upgrades according to their effect on student learning and engagement. * Outline the four phases of the collaborative transformational process: appraisal and brainstorming, commitment and communication, reactions and reflections, and revisions. * Explain how to create units of study that engage students in higher-order thinking, authentically incorporate technology and web-based tools, and align with the Common Core. * Present transformational snapshots that reflect how real practitioners across all grade levels and subject areas have upgraded curriculum and instruction and increased student ownership of learning. If we view curriculum and assessment choices as indicators of the direction in which our students are heading, most of us would agree that they're currently traveling back to the 20th century. Clearly, we need to collectively step up our curriculum. This indispensable guide offers strategic, practical knowledge that will enrich your school's curriculum mapping efforts and help you create authentic, engaging learning environments that prepare students for the future.

COBOL for the 21st Century Jul 14 2021 All orders for the regular 11th Edition will be automatically upgraded to the Update Edition. Please note the following changes made to the 11e Update Edition. As the authors were researching material on the COBOL standard, they realized that the planned COBOL 2008 standard (discussed in the 11th edition) did not in fact occur. Some of the items marked as COBOL 2008 in the 11th edition had in fact changed in 2002, and some marked as COBOL 2008 will now finally be changed in the upcoming proposed COBOL 2013 standard. Therefore, in the Update Edition, we have changed the icons to indicate COBOL 2002 changes and the upcoming proposed COBOL 2013 changes. We removed all references to NetExpress, (which Wiley no longer distributes,) and added information on the new Micro Focus Academic Program. As of Summer 2013, members of this program are eligible to receive free licenses of Visual COBOL for teaching; free downloads of Visual COBOL Personal Edition for students; free online web support through community forums, blogs, and support network; and access to online software documentation and product manuals. Visit www.microfocus.com/bridgethegap for information on how to join. Some instructors reported that their students complained that the book felt dated, due to the older dates in code output. For a more contemporary feel, we changed these dates to the current year. We added program names to Practice Programs in the text for easier reference.

Opinion Analysis in Interactions Sep 23 2019 As time goes on, big companies such as Amazon, Microsoft, Google and Apple become increasingly interested in virtual assistants. The interest and development of social robots has put research into affective and social computing at the forefront of the scene. The aim of Opinion Analysis in Interactions is to present methods based on artificial intelligence through a combination of machine learning models and symbolic approaches. Also discussed are natural language processing and affective computing, via the analysis and generation of socio-emotional signals. The book explores the analysis of opinions in human-human interaction and tackles the less-explored (yet crucial) challenges related to the analysis methods of user opinions within the context of human-agent interaction. It also illustrates the implementation of strategies for selecting and generating agent utterances in response to user opinions, and opens up perspectives on the agent's multimodal generation of utterances that hold attitudes.
