Weapons of Math Destruction Jun 23 2019 A former Wall Street quant sounds an alarm on the mathematical models that pervade modern life - and threaten to rip apart our social fabric We live in the age of the algorithm. Increasingly, the decisions that affect our lives - where we go to school, whether we get a loan, how much we pay for insurance - are being made not by humans, but by mathematical models. In theory, this should lead to greater fairness: everyone is judged according to the same rules, and bias is eliminated. And yet, as Cathy O'Neil reveals in this urgent and necessary book, the opposite is true. The models being used today are opaque, unregulated, and incontestable, even when they're wrong. Most troubling, they reinforce discrimination. Tracing the arc of a person's life, O'Neil exposes the black box models that shape our future, both as individuals and as a society. These "weapons of math destruction" score teachers and students, sort CVs, grant or deny loans, evaluate workers, target voters, and monitor our health. O'Neil calls on modellers to take more responsibility for their algorithms and on policy makers to regulate their use. But in the end, it's up to us to become more savvy about the models that govern our lives. This important book empowers us to ask the tough questions, uncover the truth, and demand change.

Visual Revelations Aug 25 2019 To function in modern society complex data must be absorbed and understood at a breakneck pace. The most efficient way to do this is through data-based graphics. This book is an exploration and celebration of graphical methods of data presentation. Visual Revelations' principal purpose is to enlighten, inform, and amuse the reader regarding the shortcomings of common graphical practices; particularly how they can misinform while simultaneously providing models of wonderful graphics. There are many examples of the best graphic practice, graphs that go beyond conveying, facts, and structure to be able to carry emotion as well. Aimed at an educated, lay audience, this volume benefits anyone who must either convey or receive quantitative information, including designers, statisticians, and people in the media.

Virtual Unreality Sep 18 2021 The author of *Zero and Proofiness* explains how to tell truth from fantasy in the digital world, and why it matters Today, the Internet allows us to spread information faster and to more people than ever before—never mind whether it's true or not. In *Virtual Unreality*, mathematician, science reporter, and journalist watchdog Charles Seife takes us deep into the information jungle and cuts a path through the trickery, fakery, and cyber skullduggery that the Internet enables. Providing a much-needed toolkit to help separate fact from fiction, Seife, with his trademark wit and skepticism,

addresses the problems that face us every time we turn on our computers and Google our most recent medical symptoms, read a politician's tweet, fact-check something on Wikipedia, or start an online relationship. Let the clicker beware.

The Physics of Invisibility Jun 15 2021 The ability to see is fundamental to our very existence. How true our perceptions really are depends upon many factors, and not least is our understanding of what light is and how it interacts with matter. It was said that the camera, the icon of light recording instruments, never lies, and in the day of the glass plate and celluloid roll-film this might well have been true. But in this modern era, with electronic cameras and computer software, it is often safe to assume that the camera always lies. The advertising images that bombard our every waking moment are manipulated in shape, profile, color, and form. In this new era, light can be manipulated with metamaterials to make one object look like another or even cause that object to vanish, literally before our eyes; not only can the image we see be manipulated, but so can the light itself.

Management Studies in Crisis Nov 08 2020 Management research is criticised for poor research practices and not addressing important problems. Tourish proposes fundamental changes to rescue it from crisis. A must read for management and organisation scholars, practising managers, university administrators and policy makers within higher education.

Gross Deception Jan 23 2022 A journey of discovering and correcting a hole in the used car universe. Dale Pollak, innovator and leader of the automotive sales and management industry, will once again, have you rethinking how to manage the used car business. More than a how-to business book, *Gross Deception* is a story of finding a problem in the reliance on gross profit and the trials to create a solution. This thoughtfully written book not only shows you the trial and error of potential answers, but also how to apply the answer that culminated from years of work. Referred to as ProfitTime, Dale's solution includes both the "New Math of Used Vehicles" and the "Investment Score" system, helping you to know the ROI and net profit potential of every vehicle. With Dale's ProfitTime solution you will:

- Invigorate your cash flow
- Increase your sales volume
- Introduce new metrics
- Initiate value-based management
- Identify market shifts

Through metric and methodology, *Gross Deception* will restructure how you view a car's time on the lot.

The Knot Book Apr 01 2020 Knots are familiar objects. Yet the mathematical theory of knots quickly leads to deep results in topology and geometry. This work offers an introduction to this theory, starting with our understanding of knots. It presents the applications of knot theory to modern chemistry, biology and physics.

Duped Oct 08 2020 A scrupulous account that overturns many commonplace notions about how we can best detect lies and falsehoods. From the advent of fake news to climate-science denial and Bernie Madoff's appeal to investors, people can be astonishingly gullible. Some people appear authentic and sincere even when the facts discredit them, and many people fall victim to conspiracy theories and economic scams that should be dismissed as obviously ludicrous. This happens because of a near-universal human tendency to operate within a mindset that can be characterized as a "truth-default." We uncritically accept most of the messages we receive as "honest." We all are perceptually blind to deception. We are hardwired to be duped. The question is, can anything be done to militate against our vulnerability to deception without further eroding the trust in people and social institutions that we so desperately need in civil society? Timothy R. Levine's *Duped: Truth-Default Theory and the Social Science of Lying and Deception* recounts a decades-long program of empirical research that culminates in a new theory of deception--truth-default theory. This theory holds that the content of incoming communication is typically and uncritically accepted as true, and most of the time, this is good. Truth-default allows humans to function socially. Further, because most deception is enacted by a few prolific liars, the so called "truth-bias" is not really a bias after all. Passive belief makes us right most of the time, but the catch is that it also makes us vulnerable to occasional deceit. Levine's research on lie detection and truth-bias has produced many provocative new findings over the years. He has uncovered what makes some people more believable than others and has discovered several ways to improve lie-detection accuracy. In *Duped*, Levine details where these ideas came from, how they were tested, and how the findings combine to produce a coherent new understanding of human deception and deception detection.

Jean Piaget Jan 11 2021 Jean Piaget is often considered to be one of the most important thinkers of the 20th century in the field of cognition. The author of this book challenges Piaget's frequent dual use of the meanings of words within the same paragraph. Extensive comparisons and examples of this extraordinary

phenomenon are presented. Conclusions are offered to explain Piaget's intent. Contents: Introduction; The Absolute Subject; Piaget's Dual System; The Marvellous Monad; Activities of the Absolute; Appendix; Bibliography.

Masters of Deception Oct 20 2021 Celebrates the use of optical illusion in art, presenting the importance and uniqueness of such work, discussing such artists as Salvador Dal i, M.C. Sesher, and Istv an Orosz.

Taken: A romantic mystery Feb 09 2021 From #1 New York Times Bestselling Author Barbara Freethy comes a tale of romance and suspense. TAKEN is Book #1 in the Deception Series. Book #2 is PLAYED. Kayla Sheridan had longed for love, marriage and a family. Now, after a miraculous whirlwind courtship with the man of her dreams, she is his wife. But on their wedding night, he vanishes, leaving Kayla with the bitter realization that her desire has made her an easy mark for deception. Nick Granville has an ingrained sense of honor and an intense desire to succeed in building the world's most challenging high-tech bridges. But when he crosses paths with a ruthless con man, he's robbed of everything he values, including his identity. With nothing left to lose, he'll risk any danger to clear his name and reclaim his life. Thrown together by fate, Kayla and Nick embark on a desperate journey toward the truth -- to uncover the mysterious motives of an ingenious and seductive stranger who boasts he can't be caught ... and to reveal the shocking secrets of their own shattered pasts.

Seeds Of Deception Dec 30 2019

Problems of Rationality May 03 2020 Problems of Rationality is the eagerly awaited fourth volume of Donald Davidson's philosophical writings. From the 1960s until his death in August 2003 Davidson was perhaps the most influential figure in English-language philosophy, and his work has had a profound effect upon the discipline. His unified theory of the interpretation of thought, meaning, and action holds that rationality is a necessary condition for both mind and interpretation. Davidson here develops this theory to illuminate value judgements and how we understand them; to investigate what the conditions are for attributing mental states to an object or creature; and to grapple with the problems presented by thoughts and actions which seem to be irrational. Anyone working on knowledge, mind, and language will find these essays essential reading.

Skeptical Theism Feb 21 2022 This collection of essays presents cutting-edge work on skeptical theistic responses to the problem of evil and the persistent objections that such responses invite.

The Daily Show with Jon Stewart Presents Earth (The Book) Dec 10 2020 Presents a humorous summation of the history of humanity and our achievements in society, government, religion, science, and culture.

Men of Mathematics Aug 18 2021 From one of the greatest minds in contemporary mathematics, Professor E.T. Bell, comes a witty, accessible, and fascinating look at the beautiful craft and enthralling history of mathematics. Men of Mathematics provides a rich account of major mathematical milestones, from the geometry of the Greeks through Newton's calculus, and on to the laws of probability, symbolic logic, and the fourth dimension. Bell breaks down this majestic history of ideas into a series of engrossing biographies of the great mathematicians who made progress possible—and who also led intriguing, complicated, and often surprisingly entertaining lives. Never pedantic or dense, Bell writes with clarity and simplicity to distill great mathematical concepts into their most understandable forms for the curious everyday reader. Anyone with an interest in math may learn from these rich lessons, an advanced degree or extensive research is never necessary.

Sensory Ecology, Behaviour, and Evolution Sep 26 2019 It deals with both mechanistic questions (e.g.

Perception and Deception Nov 28 2019 The eye sees only what the mind is prepared to comprehend. -- Henri Bergson Perception and Deception is a spirited, insightful, and timely exploration of cross-cultural miscommunication in an increasingly globalized, hyper-connected world. It offers an astonishing, intriguing, and sometimes tragic array of intercultural encounters that have gone wrong across the globe because of the limitations of our respective cultural lenses. The stories from over 70 countries (indexed by culture) are illuminated by the author's rich collection of international proverbs and sayings that reflect on the nature of perception, perspective, and "truth." In addition to these stories and reflections about cross-cultural misunderstandings, this expanded edition contains exercises that can be used as springboards for developing intercultural competence. At the end of each chapter there are questions and activities designed to

develop and heighten cultural self-awareness and sensitivity to people from other cultural backgrounds. These activities are suitable for individuals, students, and groups of all backgrounds and professions. This edition's new chapter, "Globalization and its Disconnects: Convergence Without Context," focuses on spiraling cross-cultural mis-perceptions in the areas of religion, migration, and technology. Interactive intercultural activities help readers understand and develop useful strategies to cope with the disrupting cultural disconnects of globalization. Some of the newly added interactive activities are designed to be used in conjunction with Cultural Detective Online a reasonably priced subscription-based tool that allows 24/7 access to the nearly 70 packages that are part of the Cultural Detective(R) Series. For more information about this anytime, anywhere, intercultural virtual coach used by schools, universities, multinational businesses, religious communities, and professional associations around the world visit: www.CulturalDetective.com. To subscribe as an individual or group, go to: www.CulturalDetective.com/cdonline.

Science, Music, And Mathematics: The Deepest Connections Oct 27 2019 Professor Michael Edgeworth McIntyre is an eminent scientist who has also had a part-time career as a musician. From a lifetime's thinking, he offers this extraordinary synthesis exposing the deepest connections between science, music, and mathematics, while avoiding equations and technical jargon. He begins with perception psychology and the dichotomization instinct and then takes us through biological evolution, human language, and acausality illusions all the way to the climate crisis and the weaponization of the social media, and beyond that into the deepest parts of theoretical physics — demonstrating our unconscious mathematical abilities. He also has an important message of hope for the future. Contrary to popular belief, biological evolution has given us not only the nastiest, but also the most compassionate and cooperative parts of human nature. This insight comes from recognizing that biological evolution is more than a simple competition between selfish genes. Rather, he suggests, in some ways it is more like turbulent fluid flow, a complex process spanning a vast range of timescales. Professor McIntyre is a Fellow of the Royal Society of London (FRS) and has worked on problems as diverse as the Sun's magnetic interior, the Antarctic ozone hole, jet streams in the atmosphere, and the psychophysics of violin sound. He has long been interested in how different branches of science can better communicate with each other and with the public, harnessing aspects of neuroscience and psychology that point toward the deep 'lucidity principles' that underlie skilful communication.

A Thousand Lives May 15 2021 In 1954, a pastor named Jim Jones opened a church in Indianapolis called Peoples Temple Full Gospel Church. He was a charismatic preacher with idealistic beliefs, and he quickly filled his pews with an audience eager to hear his sermons on social justice. As Jones's behavior became erratic and his message more ominous, his followers leaned on each other to recapture the sense of equality that had drawn them to his church. But even as the congregation thrived, Jones made it increasingly difficult for members to leave. By the time Jones moved his congregation to a remote jungle in Guyana and the US government began to investigate allegations of abuse and false imprisonment in Jonestown, it was too late. *A Thousand Lives* is the story of Jonestown as it has never been told. New York Times bestselling author Julia Scheeres drew from tens of thousands of recently declassified FBI documents and audiotapes, as well as rare videos and interviews, to piece together an unprecedented and compelling history of the doomed camp, focusing on the people who lived there. The people who built Jonestown wanted to forge a better life for themselves and their children. In South America, however, they found themselves trapped in Jonestown and cut off from the outside world as their leader goaded them toward committing "revolutionary suicide" and deprived them of food, sleep, and hope. Vividly written and impossible to forget, *A Thousand Lives* is a story of blind loyalty and daring escapes, of corrupted ideals and senseless, haunting loss.

The Philosophy of Deception Jul 29 2022 This title gathers together essays on deception, self-deception, and the intersections of the two phenomena, from the leading thinkers on the subject. It will be of interest to philosophers across the spectrum including those interested in philosophy of mind, philosophy of psychology, and metaphysics.

Do the Math! Nov 20 2021 Our world has become more complicated, and the notion of growth at any cost has led to constant economic uncertainty, a permanently stressed-out workforce, and everyday stories of government and corporate corruption. John K. White argues that a better knowledge of basic systems is needed to understand the world we live in, and one place to start is with counting and mathematics. Without an understanding of mathematics, we

make poor personal financial choices, and we can't make the important decisions about government bailouts, oil supplies, or global warming. Do the Math! uses creative examples—borrowing liberally from the anecdotal and the academic, from literature and the newspaper, and from the stock market and the casino—to provide a thought-provoking guide to better understanding the world around us.

Proofiness Nov 01 2022 The best-selling author of New York Times Notable Book Zero shows how mathematical misinformation pervades--and shapes--people's daily lives and is used to bring down government officials, convict the innocent, ruin the U.S. economy and more.

Machiavelli's Prince Mar 25 2022 This book gives a radical, new, chapter-by-chapter reading of Machiavelli's *The Prince*, arguing that it is an ironic masterpiece with a moral purpose. It outlines Machiavelli's most important ironic techniques: a normatively coded use of language.

The Best Writing on Mathematics 2011 Jun 03 2020 The year's finest writing on mathematics from around the world This anthology brings together the year's finest mathematics writing from around the world. Featuring promising new voices alongside some of the foremost names in the field, *The Best Writing on Mathematics 2011* makes available to a wide audience many articles not easily found anywhere else—and you don't need to be a mathematician to enjoy them. These writings offer surprising insights into the nature, meaning, and practice of mathematics today. They delve into the history, philosophy, teaching, and everyday occurrences of math, and take readers behind the scenes of today's hottest mathematical debates. Here Ian Hacking discusses the salient features that distinguish mathematics from other disciplines of the mind; Doris Schattschneider identifies some of the mathematical inspirations of M. C. Escher's art; Jordan Ellenberg describes compressed sensing, a mathematical field that is reshaping the way people use large sets of data; Erica Klarreich reports on the use of algorithms in the job market for doctors; and much, much more. In addition to presenting the year's most memorable writings on mathematics, this must-have anthology includes a foreword by esteemed physicist and mathematician Freeman Dyson. This book belongs on the shelf of anyone interested in where math has taken us—and where it is headed.

Deception and Delay in Organized Conflict Jun 27 2022 This book explores the role of deception, delay, and self-deception in the dynamics of organized conflict, taking a formal approach that hews closely to the asymptotic limit theorems of information and control theories. The resulting probability models can, with some effort -- and some confidence -- be converted to statistical tools for the analysis of real-time observational and 'experimental' data on institutionalized confrontation across both traditional and emerging 'Clausewitz Landscapes'.

Vow of Deception Sep 06 2020 My husband. My Tormentor. The most notorious man in the city offers me a job. Act as his dead wife. Adrian Volkov isn't the type of person who takes no for an answer. He commands with an iron fist and all his orders are met. When he approaches me with the offer, I have two options. Go to prison or put myself under his wrath. I choose to have a roof over my head. What's so hard about acting, right? Wrong. The moment I step into his wife's shoes, everything spirals out of control. My only way of survival is through Adrian. Or is it? This book is part of a trilogy and is not standalone.

Why We Lie Jul 05 2020 Deceit, lying, and falsehoods lie at the very heart of our cultural heritage. Even the founding myth of the Judeo-Christian tradition, the story of Adam and Eve, revolves around a lie. We have been talking, writing and singing about deception ever since Eve told God, "The serpent deceived me, and I ate." Our seemingly insatiable appetite for stories of deception spans the extremes of culture from King Lear to Little Red Riding Hood, retaining a grip on our imaginations despite endless repetition. These tales of deception are so enthralling because they speak to something fundamental in the human condition. The ever-present possibility of deceit is a crucial dimension of all human relationships, even the most central: our relationships with our very own selves. Now, for the first time, philosopher and evolutionary psychologist David Livingstone Smith elucidates the essential role that deception and self-deception have played in human--and animal--evolution and shows that the very structure of our minds has been shaped from our earliest beginnings by the need to deceive. Smith shows us that by examining the stories we tell, the falsehoods we weave, and the unconscious signals we send out, we can learn much about ourselves and how our minds work. Readers of Richard Dawkins and Steven Pinker will find much to intrigue them in this fascinating book, which declares that our extraordinary ability to deceive others--and even our own selves--"lies" at the heart of our humanity.

Deception Point Jul 25 2019 From the #1 New York Times bestselling author of *The Da Vinci Code*, *Angels & Demons*, and *Inferno* and the “master of smart

thrills” (People) comes a “rocket-fast thriller” (Vince Flynn) about an astonishing NASA discovery that unravels a deadly conspiracy that leads all the way to the White House. When a NASA satellite spots evidence of an astoundingly rare object buried deep in the Arctic ice, the floundering space agency proclaims a much-needed victory—one that could have profound implications for US space policy and the impending presidential election. With his re-election hanging in the balance, the President sends White House Intelligence analyst Rachel Sexton to the Milne Ice Shelf to verify the authenticity of the find. Accompanied by a team of experts, including the charismatic academic Michael Tolland, Rachel uncovers the unthinkable: evidence of scientific trickery. Before she can contact the President, she and Michael are attacked by a deadly team of assassins controlled by a mysterious power broker who will stop at nothing to hide the truth. Fleeing for their lives in an environment as desolate as it is lethal, their only hope for survival is to find out who is behind this masterful ploy. The truth, they will learn, is the most shocking deception of all in this “taut, fast-paced, barn-burner of a book” (St. Petersburg Times).

Proofiness Sep 30 2022 The bestselling author of "Zero" shows how mathematical misinformation pervades-- and shapes-- our daily lives.

Clinical Assessment of Malingering and Deception, Fourth Edition Aug 06 2020 "Widely used by practitioners, researchers, and students--and now thoroughly revised with 70% new material--this is the most authoritative, comprehensive book on malingering and related response styles. Leading experts translate state-of-the-art research into clear, usable strategies for detecting deception in a wide range of psychological and psychiatric assessment contexts, including forensic settings. The book examines dissimulation across multiple domains: mental disorders, cognitive impairments, and medical complaints. It describes and critically evaluates evidence-based applications of multiscale inventories, other psychological measures, and specialized methods. Applications are discussed for specific populations, such as sex offenders, children and adolescents, and law enforcement personnel. Key Words/Subject Areas: malingering, deception, deceptive, feigning, dissimulation, feigned cognitive impairment, feigned conditions, defensiveness, response styles, response bias, impression management, false memories, forensic psychological assessments, forensic assessments, clinical assessments, forensic mental health, forensic psychological evaluations, forensic psychologists, forensic psychiatrists, psychological testing and assessment, detection strategies, expert testimony, expert witnesses, family law, child custody disputes, child protection, child welfare Audience: Forensic psychologists and psychiatrists; other mental health practitioners involved in interviewing and assessment, including clinical psychologists, social workers, psychiatrists, and counselors. Also of interest to legal professionals"--

Martin Gardner's Table Magic Mar 01 2020 Step-by-step instructions and nearly 200 simple diagrams show beginners how to make cards vanish and reappear, get coins to pass through solid objects, make articles mysteriously travel from one location to another, and more.

Finding the Truth in the Courtroom Aug 30 2022 'Finding the Truth in the Courtroom' combines the science behind deception and memory and their relation in court. Testimonies are often times the most important piece of evidence in legal cases. Hence, this book shows how such testimonies can be riddled with deception and/or memory errors, how to detect them, and what you can do against them.

Death of a Salesman Apr 13 2021 Willy Loman has been a salesman all his life, but at sixty he is forced to take stock of his life and face its futility and failure. His predicament gives him heroic stature in this modern-day tragedy.

Game Theory for Cyber Deception Dec 22 2021 This book introduces game theory as a means to conceptualize, model, and analyze cyber deception. Drawing upon a collection of deception research from the past 10 years, the authors develop a taxonomy of six species of defensive cyber deception. Three of these six species are highlighted in the context of emerging problems such as privacy against ubiquitous tracking in the Internet of things (IoT), dynamic honeynets for the observation of advanced persistent threats (APTs), and active defense against physical denial-of-service (PDoS) attacks. Because of its uniquely thorough treatment of cyber deception, this book will serve as a timely contribution and valuable resource in this active field. The opening chapters introduce both cybersecurity in a manner suitable for game theorists and game theory as appropriate for cybersecurity professionals. Chapter Four then guides readers through the specific field of defensive cyber deception. A key feature of the remaining chapters is the development of a signaling game model for the species of leaky deception featured in honeypots and honeyfiles. This model is expanded to study interactions between multiple agents with varying abilities to detect deception. Game Theory for Cyber Deception will appeal to advanced undergraduates, graduate students, and researchers interested in applying game theory to

cybersecurity. It will also be of value to researchers and professionals working on cybersecurity who seek an introduction to game theory.

Classical and Quantum Physics Jan 29 2020 This proceedings is based on the interdisciplinary workshop held in Madrid, 5-9 March 2018, dedicated to Alberto Ibort on his 60th birthday. Alberto has great and significantly contributed to many fields of mathematics and physics, always with highly original and innovative ideas. Most of Alberto's scientific activity has been motivated by geometric ideas, concepts and tools that are deeply related to the framework of classical dynamics and quantum mechanics. Let us mention some of the fields of expertise of Alberto Ibort: Geometric Mechanics; Constrained Systems; Variational Principles; Multisymplectic structures for field theories; Super manifolds; Inverse problem for Bosonic and Fermionic systems; Quantum Groups, Integrable systems, BRST Symmetries; Implicit differential equations; Yang-Mills Theories; BiHamiltonian Systems; Topology Change and Quantum Boundary Conditions; Classical and Quantum Control; Orthogonal Polynomials; Quantum Field Theory and Noncommutative Spaces; Classical and Quantum Tomography; Quantum Mechanics on phase space; Wigner-Weyl formalism; Lie-Jordan Algebras, Classical and Quantum; Quantum-to-Classical transition; Contraction of Associative Algebras; contact geometry, among many others. In each contribution, one may find not only technical novelties but also completely new way of looking at the considered problems. Even an experienced reader, reading Alberto's contributions on his field of expertise, will find new perspectives on the considered topic. His enthusiasm is happily contagious, for this reason he has had, and still has, very bright students wishing to elaborate their PhD thesis under his guidance. What is more impressive, is the broad list of rather different topics on which he has contributed.

Deliberate Deception Jul 17 2021 ***** NEW RELEASE ***** Following the award-winning mystery thriller, SOLEMNLY SWEAR... Alex Porter is back...and the stakes just got higher! A greedy corporation rigs a multi-million dollar raffle—creating false hopes for ticket buyers—but they aren't winning, they're dying. What comes next will shock the world! DELIBERATE DECEPTION heralds the return of Alex Porter; retired Air Force OSI agent turned private investigator, in Joe Porrazzo's most powerful suspense thriller yet. Seven months after leaving New England, Alex, still grieving the tragic deaths of his wife and daughter, gets an urgent call from his friend, Joe Prater. A friend has gone missing from his home in Tucson, and Alex agrees to check it out. HEADLINE NEWS: Tragedy in Tucson While investigating, Alex gets too close to the truth and becomes a target himself. He finds himself teamed with the very person hired to kill him, as they race against the clock to prevent a mysterious group from striking in Tucson and shocking the world. Don't miss the nonstop action; the deception is deliberate...and the results are deadly!

Lying and Deception May 27 2022 This is the most comprehensive and up-to-date investigation of moral and conceptual questions about lying and deception. Carson argues that there is a moral presumption against lying and deception that causes harm, he examines case-studies from business, politics, and history, and he offers a qualified defence of the view that honesty is a virtue.

The Vanishing at Deception Gap Apr 25 2022 A wholesome family mystery series for tweens and teens, 10-15 years An odd message arrives on Kathy's cellphone: "Pirates are operating out here and they're dangerous. I can't prove it, not yet, but I need your help. Please call asap." Tom asks, "You know this guy?" Kathy replies, "Beauford Bradley? Never heard of him!" It's the beginning of an exciting new adventure, one that taxes the mystery searchers in ways they couldn't even imagine. Beau Bradley - surrounded by two dozen fellow workers - has vanished into thin air. Who and why? When and where? And what on earth is happening at Deception Gap Railroad Yard? The mystery searchers embark on a puzzling search for the missing man. . . but has time already run out?

Talking Cures and Placebo Effects Mar 13 2021 Psychoanalysis has had to defend itself from a barrage of criticism throughout its history. Nevertheless, there are many who claim to have been helped by this therapy, and who claim to have achieved genuine insight into their condition. But do the psychodynamic or exploratory psychotherapies - the so-called talking cures - really help clients get in touch with their "inner", "real" or "true" selves? Do clients make important discoveries about the real causes of their behaviours, emotions, and personalities? Are their insights, and the psychodynamic interpretations offered them by their psychotherapists, true? Many think so. Talking Cures and Placebo Effects contests this view. It defends the unpopular hypothesis that therapeutic changes in the psychodynamic psychotherapies are sometimes functions of powerful placebos that rally the mind's native healing powers in much the same way that placebo pills rally the body's native healing powers; and that psychodynamic insights and interpretations are themselves placebos. Few clients know this, and

fewer still are informed of the potential placebo effects at play in exploratory psychotherapy, and of the consequent risks of self-misinterpretation and self-deception. Thus does Talking Cures and Placebo Effects target a host of problems that lie at the very intersection of the epistemology, ethics, scientific status, and public accountability of the talking cures.
