Literary Values and Other Papers Sep 26 2022 John Burroughs was born April 3, 1837, near the town of Roxbury in the Catskill Mountains. Growing up on his parents' farm, he absorbed much of the nature and country life that he would later write about in his many volumes. He taught briefly, married, and during the Civil War settled in Washington, D.C. where he obtained a job as a clerk in the Treasury Department. It was during his nine years in Washington that he published his first book, *Wake-Robin*. In 1873 he returned to New York State and established his home "Riverby" on the west bank of the Hudson River at West Park. He began fruit farming and continued to write, publishing a new book about every two years.

The Baptism Papers Jun 18 2019 In *The Baptism Papers*, professional engineer and preacher, Peter Frow, attests to the disquieting reality that certain laws and disciplines within his church are being applied with such monolithic rigidity that grace is stifled. Here is a poignant reminder that when denominational distinctives have greater potential to divide the Church than the cross has to unite it, then such practices have become denominational idols.

Time and the Literary Jan 06 2021 *Time and the literary: the immediacy of information technology has supposedly annihilated both. Email, cell phones, satellite broadcasting seem to have ended the long-standing tradition of encoding our experience of time through writing. Paul de Man's seminal essay "Literary History and Literary Modernity" and newly commissioned essays on everything from the human genome to grammatical tenses argue, however that the literary constantly reconstructs our understanding of time. From eleventh-century France or a science-fiction future, Time and the Literary shows how these two concepts have been and will continue to influence each other.*

The Value of Everything Sep 14 2021 Who really creates wealth in our world? And how do we decide the value of what they do? At the heart of today's financial and economic crisis is a problem hiding in plain sight. In modern capitalism, value-extraction - the siphoning off of profits, from shareholders' dividends to bankers' bonuses - is rewarded more highly than value-creation: the productive process that drives a healthy economy and society. We misidentify takers as makers, and have lost sight of what value really means. Once a central plank of economic thought, this concept of value - what it is, why it matters to us - is simply no longer discussed. Yet, argues Mariana Mazzucato in this penetrating and passionate new book, if we are to reform capitalism - to radically transform an increasingly sick system rather than continue feeding it - we urgently need to rethink where wealth comes from. Who is creating it, who is extracting it, and who is destroying it? Answers to these questions are key if we want to replace the current parasitic system with a type of capitalism that is more sustainable, more symbiotic: that works for us all. The Value of Everything will reignite a long-needed debate about the kind of world we really want to live in.

A Systems Perspective on Financial Systems Apr 21 2022 This book is devoted to a systems-theoretical presentation of the main results of applying the systemic yoyo model and relevant analytical tools to the topics of money and financial institutions. The author presents the main concepts and results of the subject matter in the language of systems science, which has in the past century prompted revolutionary applications of systems research in various subfields of traditional disciplines. This volume applies a brand new logic of reasoning to some of the unsettled problems in the area of money and banking. Due to the particular systemic approach employed, the reader will be able to see how different economic activities are implicitly related to each other and how financial decisions are holistically made in reference to seemingly unrelated

events. That is, the learning of this particular subject matter takes place at a different, more elevated level, from which, among others, economies are respectively seen as both closed and open systems; their interactions emulate those of rotational pools of fluids. This book can be used as a textbook for researchers and graduate students in economics, finance, systems science, and mathematical / systems modeling. It will also be useful as a reference book for applied economists and various policy makers.
