The Pittsburgh Way to Efficient Healthcare Oct 11 2020 America's healthcare system needs to change. Not only does our country spend 16 percent of its gross domestic product on healthcare, but despite spending more than other industrialized countries, our general health lags behind. While we have plenty of data identifying where healthcare in America falls short, we've precious little practical, hands-on information about how to fix it. In *The Pittsburgh Way to Efficient Healthcare*, Naida Grunden provides a ingenious and optimistic look at how principles borrowed from industry can be applied to make healthcare safer, and in doing so, make it more effective and less costly. The book is a compilation of case studies from units in different hospitals around the Pittsburgh region that successfully applied industrial principles to the benefit of patients and the satisfaction of employees. *The Pittsburgh Way to Efficient Healthcare* is written for all healthcare stakeholders - from clinicians to insurers to employers to those who have the greatest stake in healthcare quality improvement, the patients. About the Author: Naida Grunden has been a business and technical writer for over 25 years, specializing for the past six years in health and medical writing for the Pittsburgh Regional Health Initiative. She writes the PRHI Executive Summary newsletter, a publication she founded in 2001 (www.prhi.org). Her work has appeared in publications as varied as the Joint Commission Journal on Quality and Patient Safety and Air Line Pilot magazine. Ms. Grunden received the 2006 Challenge Award from the American College of Clinical Engineering for her article on the VA wheelchair work in Biomedical Instrumentation and Technology magazine. Ms. Grunden completed her B.A. in English at California State University, East Bay, and her secondary English teaching credential at California State University, San Francisco. Industrial Cleaning Technology Dec 25 2021 The word cleaning covers a wide range of activities from good housekeeping and janitorial duties to clinical process cleaning applications that form part of our everyday lives, most people are not aware of their existence, and yet without them, many of the services and products we take for granted would not be available. Most chapters include case studies of various cleaning problems together with the solutions offered. Emphasis is placed on the practical aspects of designing, manufacturing and operating cleaning equipment, this includes a detailed examination of traditional cleaning methods, and considers a number of lesser known techniques that have been developed over recent years together with a glimpse of the future trends in the industry In addition to the actual cleaning techniques, the book examines the effect, of increasing international health, safety, training, and environmental legislation together with regulations that control cleaning standards in the pharmaceuticals, cosmetics, food and drinks manufacturing industries. In this respect, the book is not intended to be a definitive reference book. Legislation and regulations are continually being upgraded, particularly those relating to European Directives. No apologies are given for the fact that the reader will be continually reminded of the need to obtain up to date copies of the various documents referred to, and to secure expert advice on those issues that are crucial in terms of health, safety and hazardous conditions. To assist the reader, useful information sources are listed in the reference section
