Personal Electric Vehicles - IEVs Jul 01 2022 I call Personal Electric Vehicles IEVs. That's because people want their Electric Vehicle to be more personal. They want it to resonate with who they are (I). Can you blame them? Some call these vehicles micromobility. An IEV is like your alter ego. For some people, this would be a Tesla or a Nissan Leaf. But, IEVs are more personal. That means they're typically smaller. Often they're smaller or not much bigger than the driver / rider. Ask yourself these questions. If I put wheels on my feet and added some batteries for electricity, what would I transform into? How fast would I be able to go? And, how much fun could I have getting there? That's the IEV for you. What is a Personal Electric Vehicle (IEV)? How am I defining them? #1 It's Fully Electric: I won't be including any Hybrid Vehicles which use fossil fuels. #2 It's Personal: This vehicle not only gets you around, it is the definition of who you are. #3 It's Usually for One Person: One part of whether a vehicle is personal or not, is its capacity. While personal seems to imply one person, I'm going to include vehicles which hold two. You might normally be the only person in or on your vehicle. However, every so often, you might want to or need to, take someone else along. Perhaps you never go anywhere without your BFF. So, what kind of vehicles are we talking about here? Electric Skateboards, e-bikes, Micro cars and many more. I cover IEVs that travel on the ground - on the street and off-road. I cover those that go in and under the water and those which fly. I look at vehicles which are used on the farm and in the warehouse. The best part, is that I help you create an evaluation check-list for when you buy your IEV - the personal electric vehicle that is you.

Site Control of Materials Aug 29 2019 Site Control of Materials: Handling, Storage and Protection deals with improving control in construction sites to limit waste resulting from improper storage and handling of valuable or fragile materials. According to the Building Research Establishment in the United Kingdom, 10-20% of all materials

delivered to the construction site either end up as waste or are illegally removed during the contract. Bigger construction contracts such as in housing developments require new kinds of materials in larger volumes and new construction techniques, leading to increases in waste. To be able to lessen wastage, site management must 1) anticipate the progress and problems of construction; 2) control men and materials with equal efficiency; 3) complete the contract within the programmed period; and 4) carry out the work according to specification. The book explains in detail the procedures for obtaining materials, materials handling (including unit loads, pallets, deliveries, offloading), storage (stockpile arrangements, protection, facilities, withdrawals), as well as implementing stock controls on sites (coordination, transfer, accounting). The text also addresses prevention of on-site damages through site supervision, out-of-hours supervision, and installing fire precautions. The book should prove valuable for construction engineers, foremen, project managers, plant administrators, warehouse keepers, and other personnel connected with materials handling, their storage or safekeeping.

Autonomous Driving Nov 12 2020 This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving".

Personal Cars and China Oct 04 2022 This collaborative study between the NRC and the Chinese Academy of Engineering (CAE) addresses the problems facing China in the next twenty years as it attempts to provide personal transport desired by millions of Chinese, while preserving the environment and the livability of its cities. According to Song Jian, president of the CAE, the decision has already been taken to produce a moderate cost family car in China, which will greatly increase the number of vehicles on the roads. This study explores the issues confronting the country, including health issues, the challenge to urban areas, particularly the growing number of megacities, environmental protection, infrastructure requirements, and technological options for Chinese vehicles. It draws on the experience of the United States and other countries and review model approaches to urban transportation and land use planning. Personal Injury Surveillance Feb 25 2022 According to figures published by the Association of British Insurers, the insurance industry detected 125,000 dishonest claims valued at £1.3 billion in 2016. With similar amounts of fraud going undetected each year, it is unsurprising that insurers invest around £200 million to combat it. Personal Injury Surveillance is a unique guide, providing an insight into the hitherto undisclosed methodologies of personal injury surveillance and the systemic use of an unregulated profession to investigate accident victims. Surveillance is one of many tools used by the UK insurance industry to investigate the veracity of a personal injury claim; others include statistical analysis of claims data and complex algorithms with key fraud indicators, enabling insurers to get upstream of the issue and, in some cases, actually predict fraud before it occurs. However, there is nothing more compelling than surveillance evidence which is why it remains a fundamental element of the claims management process. Significant investment in fraud awareness training coupled with new legislation and a more collaborative approach has provided the insurance industry with teeth, and

it isn't afraid to use them. This guide will provide honest claimants, their legal representatives and insurers with an enlightening, and in parts amusing, insight into the world of personal injury surveillance. It will also prove sobering for anyone contemplating the submission of a fraudulent personal injury claim with intent to defraud an insurer.
