score in their A Level Maths examination. Each Lesson covers theory and formula necessary for the chapter and step by step explanation of all solutions. Problems are arranged in an ascending order of difficulty reaching A level standard. Applies also for any students studying at this level. A continuation of C2-trigonometry Lesson with more advance problems. It includes:
1) Definition of $\cot x$, $\sec x$, $\operatorname{cosec} x$.
2) Use of identities such as: a) $\tan \operatorname{DEGREES}^2(x)+1=\sec \operatorname{DEGREES}^2(x)$ b) \cot

$\operatorname{DEGREES}^2(x)+1=\operatorname{cosec} \operatorname{DEGREES}^2(x)$ Further Identities such as $\sin 2x$, $\cos 2x$, $\tan 2x$. Prove of the above identities. 3) Exercises involving double angles and half angles. 4) Use of $\sin(A+B)$, $\cos(A+B)$, $\tan(A+B)$, $\sin(A-B)$..etc Use of these formula to evaluate without the use of calculator, and using standard angles the exact answers of ie $\cos 15$ etc 5) Extensive covering of proving identities involving also cases such $\sin 3x$, $\cos 3x$, $\tan 3x$ etc 6) Solution of more advanced trigonometric equations. general solutions for a certain interval). 7) Solution of the trigonometric equation: $a\cos x + b\sin x = c$, where a , b and c are constants. 8) Eliminating the angle from a set of equations and finding an expression for $y=f(x)$. ie eliminate the angle from the set of equations $x=2\cos A+1$ and $y=3\sin A-2$. Use of the trigonometric identities. 9) Converting sums to products and products to sums. Use of such formula to solve different trigonometric problems.

Trigonometry Jul 20 2021 In a sense, trigonometry sits at the center of high school mathematics. It originates in the study of geometry when we investigate the ratios of sides in similar right triangles, or when we look at the relationship between a chord of a circle and its arc. It leads to a much deeper study of periodic functions, and of the so-called transcendental functions, which cannot be described using finite algebraic processes. It also has many applications to physics, astronomy, and other branches of science. It is a very old subject. Many of the geometric results that we now state in trigonometric terms were given a purely geometric exposition by Euclid. Ptolemy, an early astronomer, began to go beyond Euclid, using the geometry of the time to construct what we now call tables of values of trigonometric functions.

introduction to calculus, where one studies what mathematicians call analytic properties of functions. One of the goals of this book is to prepare you for a course in calculus by directing your attention away from particular values of a function to a study of the function as an object in itself. This way of thinking is useful not just in calculus, but in many mathematical situations. So trigonometry is a part of pre-calculus, and is related to other pre-calculus topics, such as exponential and logarithmic functions, and complex numbers.
