Digital Entrepreneurship in Africa Dec 22 2021 The hope and hype about African digital entrepreneurship, contrasted with the reality on the ground in local ecosystems. In recent years, Africa has seen a digital entrepreneurship boom, with hundreds of millions of dollars poured into tech cities, entrepreneurship trainings, coworking spaces, innovation prizes, and investment funds. Politicians and technologists have offered Silicon Valley–influenced narratives of boundless opportunity and exponential growth, in which internet-enabled entrepreneurship allows Africa to “leapfrog” developmental stages to take a leading role in the digital revolution. This book contrasts these aspirations with empirical research about what is actually happening on the ground. The authors find that although the digital revolution has empowered local entrepreneurs, it does not untether local economies from the continent’s structural legacies. Drawing on a five-year research project, the authors show how entrepreneurs creatively and productively adapt digital technologies to local markets rather than dreaming of global dominance, achieving sustainable businesses by scaling based on relationships and customizing digital platform business models for African infrastructure challenge. The authors examine African entrepreneurial ecosystems; show that African digital entrepreneurs have begun to form a new professional class, becoming part of a relatively exclusive cultural and economic elite; and discuss the impact of Silicon Valley’s mythologies and expectations. Finally, they consider the implications of their findings and offer recommendations to policymakers and others.

Analyzing Uncertainty in Civil Engineering Jan 11 2021 This volume comprehensively addresses the issue of uncertainty in civil engineering, from design to construction. Current engineering practice often leaves uncertainty issues aside, despite the fact that new scientific tools have been developed in the past decades that allow a rational description of uncertainties of all kinds, from model uncertainty to data uncertainty. It is the aim of this volume to take a critical look at current engineering risk concepts in order to raise awareness of uncertainty in numerical computations, shortcomings of a strictly probabilistic safety concept, geotechnical models of failure and their construction implications, actual construction, and legal responsibility. In addition, a number of the new procedures for modelling uncertainty are explained. The book is a result of a collaborative effort of mathematicians, engineers and construction managers who met regularly in a post-graduate seminar at the University of Innsbruck during the past years.

Firm Innovation in Emerging Markets Jun 03 2020 The authors investigate the determinants of firm innovation in over 19,000 firms across 47 developing economies. They define the innovation process broadly, to include not only core innovation such as the introduction of new products and new technologies, but also other types of activities that promote knowledge transfers and adapt production processes. The authors find that more innovative firms are large exporting firms characterized by private ownership, highly educated managers with mid-level managerial experience, and access to external finance. In contrast, firms that do not innovate much are typically state-owned firms without foreign competitors. The identity of the controlling shareholder seems to be particularly important for core innovation, with those private firms whose controlling shareholder is a financial institution being the least innovative. While the use of external finance is associated with greater innovation by all private firms, it does not make state-owned firms more innovative. Financing from foreign banks is associated with higher levels of innovation compared with financing from domestic banks.
