Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles Apr 12 2021 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

Daily Drawings VOL. 01 Feb 29 2020 From November 2018 to November 2019 the goal was to create a daily drawing from scratch and post it to social media. This is quite a meaty and varied selection of the best pieces throughout that year. The selection of drawings included in this book represent the subconscious in many instances as the artist chose to not have a plan much of the time and relied on chaotic scribbles to begin many of the drawings and then pull from the ether so to speak and give the scribbles form. Others were drawn from photos taken or posted to social media from that particular day or drawn directly from life.

An English Car Designer Abroad Jun 14 2021 An English Car Designer Abroad is the humorous and personal account of a life spent working on the design of some of the world's best known cars. Commencing his career as a designer at Vauxhall Motors, Luton in 1973, Peter Birtwhistle then left the UK in 1977 to take a position abroad, at Audi in Germany, where he lived for the rest of his working life. From Audi, his career took him to Porsche in Stuttgart, and eventually, in 1988, to the Japanese company Mazda, with whom he would help develop a Design Centre close to Frankfurt, eventually becoming Chief Designer for Mazda Motor Europe. During his career, Birtwhistle was involved in the design of some very significant cars and in his work and travels, crossed the paths of many significant personalities from the car industry. Car design has changed enormously since the time he commenced his career, and for Birtwhistle it was

clear, his story needed to be documented before it was lost in time. Featuring original photographs and illustrations from the author's own collection, this highly humorous and very personal story creates a fascinating collage of anecdotes and historical facts, not only from the secretive world of car design, but also his private life.

Blitzoid Aug 05 2020 Blitzoid is a playful term, for how one feels when turning, or having turned. Wasted would be the same thing. It's that envious, coveted state of mind one hopes to reach by turning. There is a level of ThC buildup in the bloodstream, in which short term memory cells function at that final time, but are wiped clean of recall later. Alcohol achieves a similar effect on memory, at certain blood levels. Another suspect of memory disfunction, would be Post Traumatic Stress Disorder, and frontal lobe epilepsy. "We're burning braincells, man," would have been a good joke to laugh at, if it weren't so accurate, at certain blood levels in the brain, so far as is undefined. The pot of gold we were all seeking in the 60s and 70s, was that awareness of the sanctity of all things, either living or inanimate.
