Using Toolpack Software Tools Feb 27 2020 I am very pleased to write these few brief paragraphs introducing this book, and would like to take this opportunity to attempt to set the Toolpack project in an appropriate historical context. The Toolpack project must be considered to have actually begun in the Fall of 1978, when Prof. Webb C. Miller, at a meeting at Jet Propulsion Laboratories in Pasadena, California, suggested that there be a large-scale project, called Toolpack, aimed at pulling together a comprehensive collection of mathematical software development tools. It was suggested that the project follow the pattern of other "Pack" projects, such as Eispack, Linpack, and Funpack which had assembled and systematized comprehensive collections of mathematical software in such areas as eigenvalue computation, linear equation solution and special function approximation. From the that the Toolpack project would differ significantly from beginning it was recognized these earlier "Pack" projects in that it was attempting to assemble and systematize software in an area which was not well established and understood. Thus it was not clear how to organize and integrate the tools we were to collect into Toolpack. As a consequence Toolpack became simultaneously a research project and a development project. The research was aimed at determining effective strategies for large-scale integration of large-scale software tools, and the development project was aimed at implementing these strategies and using them to put high quality tools at the disposal of working mathematical software writers.

Libraries: A Design Manual Feb 21 2022 Libraries as a building type have been subjected to substantial changes in particular in the past ten years. Milestones such as Rem Koolhaas' Seattle Central Library from 2004 reinvented the typology completely and reflected a development from elitist temple of learning to a public living room. Hybrids between library and department store or theater were conceived. Today, the ubiquity of electronic devices and media needs to be taken into account by the designer: every new library has areas without any books now. This work of reference explains systematically all technological and planning requirements of library design. Special features such as RFID, signage, acoustics or specific structural load issues are explained in texts by experts from the fields of architecture and library science. Finally, approximately 40 best-practice case studies of contemporary library design are documented extensively. They are organized in four categories – national libraries, large public libraries, small public libraries, university libraries – and comprise high-profile examples such as Jo Coenen's Openbare Bibliotheek Amsterdam, Alvaro Siza's Public Library Viana do Castelo in Portugal or Mecanoo's Library of Birmingham from 2013.

The Management of Technical Innovation in Libraries Aug 23 2019 These four papers presented at the Polytechnic of Central London School of Management focus on the management of technical innovation in libraries as it affects decision making, library organization, non-systems staff, and interlibrary cooperation. Procedures for implementing automation in a library are outlined: a system analysis and costing of the existing system, improved system requirements, manual alternatives cost comparisons, a feasibility study, new system design, programs, systems recosting, staff training, and postoperational system improvements. The probable impact on library organization of the rapid increase in distributive computer processing power is discussed, as well as the effects on technical services departments and reactions by non-systems staff. One library system's experience in coping with negative staff reactions and cooperative arrangement between two libraries illustrate possible problems and benefits of library automation. Library organization and interlibrary cooperation papers list six and 17 sources, respectively. (RBF)
