The Elgar Companion to Economics and Philosophy Jul 25 2019 . . . there are many first-rate contributions here. Those contributions make this collection valuable especially to readers who are already knowledgeable about the various areas in which the interests of philosophers and economists overlap. Daniel M. Hausman, *Journal of Economic Methodology* *The Elgar Companion To Economics and Philosophy* is a very good read. Every library should buy it now. John King, *History of Economics Review* The volume collects articles surveying developments in such related fields as economic methodology, ethics, epistemology, and social ontology. Many of the articles are forward-looking, and as such constitute substantive and original (and at times provocative) contributions to the literature. The volume as a whole is a success; the editors are to be congratulated for their efforts. Bruce J. Caldwell, University of North Carolina, Greensboro, US This Companion is called economics and philosophy but actually it is about the philosophy of economics and all the great questions in the subject are here. The weather in the philosophy of economics has been stormy lately and the climate continues to this day to be unsettled. Will the storms soon settle down to give way to calmer days? Read this excellent collection of informative papers in the field to stimulate your own answer to that question. Mark Blaug, University of London and University of Buckingham, UK *The Elgar Companion to Economics and Philosophy* aims to demonstrate exactly how these two important areas have always been linked, and to illustrate the key areas of overlap. The Companion is divided into distinct parts, each of which highlights a leading area of scholarly concern: political economy conceived as social philosophy; the methodology and epistemology of economics; and social ontology and the

ontology of economics. The contributors are well-known and distinguished authors from a variety of disciplines, who have been invited both to survey and to provide a personal assessment of current and prospective future states of their respective areas of philosophical interest. Academics and students who have an interest in economics and philosophy, political philosophy and the history of ideas will find this book of great appeal, as will researchers working in the field and readers interested in the nature of the discipline of economics.

Knowledge and Action in the Light of Goethe's Ideas: Works 8 of 16 Sep 06 2020 This lecture is part of the collection "Nature's Open Secret" by Rudolf Steiner. Steiner (1861-1925) was an Austrian philosopher, social reformer, architect, and esotericist. He gained initial recognition as a literary critic and cultural philosopher. At the beginning of the 20th century, he founded a spiritual movement, Anthroposophy. He is considered the father of Waldorf education, biodynamic agriculture, anthroposophical medicine and spiritual science. At the young age of twenty-one, Rudolf Steiner was chosen to edit Goethe's scientific writings for the principle Goethe edition of his time. Goethe's literary genius was universally acknowledged; it was Steiner's task to understand and comment on Goethe's scientific achievements. Steiner recognized the significance of Goethe's work with nature and his epistemology, and here began Steiner's own training in epistemology and spiritual science. Steiner's introductions to Goethe's works re-visioned the meaning of knowledge and how we attain it. Goethe had discovered how thinking could be applied to organic nature and that this experience requires not just rational concepts but a whole new way of perceiving. In an age when science and technology have been linked to great catastrophes, many are looking for new ways to interact with nature. With a fundamental declaration of the interpenetration of our consciousness and the world around us, Steiner shows how Goethe's approach points the way to a more compassionate and intimate involvement with nature. The entire Collected Works of Rudolf Steiner are available from SteinerBooks.

Ideologies in Action Jun 03 2020 *Ideologies in Action: Morphological Adaptation and Political Ideas* explores how political ideas move across geographical, social and chronological boundaries. Focusing on North American and European case studies ranging from populist tax revolts through parenting advice manuals to online learning environments, the contributors propose new methods for understanding how political entrepreneurs, intellectuals and ordinary citizens deploy and redefine ideologies. All of these groups are consumers of ideology, drawing on pre-existing, transnational ideological concepts and narratives in order to make sense of the world. They are also all producers of ideology, adapting and reconfiguring ideological material to support their own political aims, desires and policy objectives. In doing so, they combine common conceptual elements - interpretations of freedom, order, national identity, democracy, community or equality - with sentiments and imaginations deeply embedded in cultural and social practice. To render these ideological practices intelligible, the contributors to this volume blend conceptual morphology, which emphasizes how meaning emerges in and through connections between political ideas, with close readings of the vernacular and experiential dimensions of ideologies in action. This book offers new insights into how ideologies in varied social and political settings can be decoded, and challenges hierarchical distinctions between

ideological 'producers' and 'consumers'. The chapters in this book were originally published as a special issue of the Journal of Political Ideologies.

Research in action Mar 13 2021 Research in action engages the researcher who wants to live up to the challenges of contemporary science and to contribute to innovation and social change. This ambition to contribute to change raises many questions. How to define the main target group of the research? What role does this group play in the research? Which methods of data collection are most appropriate? Who are the commissioners of the research and do their interests match with those of the prime target group? How to deal with power relations in research situations? What do these issues mean for the relation of researcher with the people in the researched situation? And, last but not least, what does it all imply for the researcher him- or herself? These questions have to be dealt with in situations in which the design and organization of the research is still open but also in situations where these have already been preformatted through the research proposal or earlier developments. In any case, they have to be framed in the theoretical considerations of what is science. This book aims to assist scholars and practitioners who would want to deal with this kind of research and questions. The book does not offer recipes, nor fixed scenarios. It presents a series of practical research cases and theoretical insights by experienced researchers who themselves struggled with what is probably the most meaningful questions of the science today. The practical examples of research in action are from different disciplines and include themes from health care, policy research, agricultural technology and education, in Northern and Southern context. Four leading themes of research in action are introduced in the first chapter. In the last chapter the editors return to the dilemmas research in action and try to clarify the options and responses that are possible in different situations.

Think Tanks and Civil Societies Jan 23 2022 Government and individual policymakers throughout the developed and developing world face the common problem of bringing expert knowledge to bear in government decision making. Policymakers need understandable, reliable, accessible, and useful information about the societies they govern. They also need to know how current policies are working, as well as possible alternatives and their likely costs and consequences. This expanding need has fostered the growth of independent public policy research organizations, commonly known as think tanks. *Think Tanks and Civil Societies* analyzes their growth, scope, and constraints, while providing institutional profiles of such organizations in every region of the world. Beginning with North America, contributors analyze think tank development past and future, consider their relationship to the general political culture, and provide detailed looks at such examples as the Heritage Foundation and the Institute for Research on Public Policy. A historical and subregional overview of think tanks throughout Europe notes the emphasis on European Union issues and points to a dramatic rise in the number and influence of free market institutes across the continent. Think tanks in Germany, Spain, and France are profiled with respect to national politics and cultures. Advanced industrial nations of northern Asia are compared and contrasted, revealing a greater need for independent policy voices. Moving to countries undergoing economic transition, contributors deal with challenges posed in Russia and the former Soviet bloc and their think tanks' search for influence, independence, and sustainability. Other chapters deal with the developing countries of Africa, Asia, the Middle East, and Latin America, finding that the number, quality, and independence of think tanks is largely determined by the degree of democracy in individual nations.

Marine Conservation Jan 11 2021 In the last 50 years marine conservation has grown from

almost nothing to become a major topic of global activity involving many people and organisations. Marine conservation activities have been applied to a huge diversity of species, habitats, ecosystems and whole seas. Many marine conservation actions have focused on human impacts on the marine environment from development and pollution to the impacts of fisheries. Whilst science has provided the backbone of thinking on marine conservation, perhaps the biggest change over this period has been the use of an ever-increasing range of techniques and disciplines to further marine conservation ends. Bob Earll explores what marine conservation involves in practice by providing a synthesis of the main developments from the viewpoints of 19 leading practitioners and pioneers who have helped shape its progress and successes. Their narratives highlight the diversity and richness of activity, and the realities of delivering marine conservation in practice with reference to a host of projects and case studies. Many of these narratives demonstrate how innovative conservationists have been – often developing novel approaches to problems where little information and no frameworks exist. The case studies described are based on a wide range of European and international projects. This book takes an in-depth look at the reality of delivering marine conservation in practice, where achieving change is often a complicated process, with barriers to overcome that have nothing to do with science. Marine conservationists will often be working with stakeholders for whom marine conservation is not a priority. This book aims to help readers describe and understand those realities, and shows that successful and inspirational projects can be delivered against the odds.

Ideas for Action Jul 05 2020 Ideas for Action explores a wide range of leftist political traditions - including Marxism, anarchism, anti-imperialism, poststructuralism, feminism, critical race theory, and environmentalism. Kaufman creates a coherent analysis of complex issues by incorporating elements of her own activist experiences, but doesn't pretend to offer "the final word." Instead, she encourages both intellectual inquiry and practical application of political ideas, offering readers a gateway to orienting their own critical understandings and to making theory useable.

Action Research for Democracy May 15 2021 Contemporary society encounters profound economical, socio-ecological and political crises challenging the democratic foundation of our societies. This book addresses the potentials and challenges for Action Research supporting democratic alternatives. It offers a broad spectrum of examples from Scandinavian Action Research showing different openings towards democratic development. The book's first part contributes with a wide range of examples such as Action Research in relation to the Triple Helix/Mode II contexts, to design as a democratic process, to renewal of welfare work and public institutions, to innovation policies combining Action Research with gender science. In the second part of the book epistemological and ontological dimensions of Action Research are discussed addressing questions of validity criteria related to Action Research, the transformation of knowledge institutions and the specific character of creativity in Action Research. The book offers a basis for theoretical as well as practical oriented discussions and critical reflections

within the field of Action Research and related research orientations, involving a wide range of actors.

Rethinking the Individualism-Holism Debate Sep 26 2019 This collection of papers investigates the most recent debates about individualism and holism in the philosophy of social science. The debates revolve mainly around two issues: firstly, whether social phenomena exist sui generis and how they relate to individuals. This is the focus of discussions between ontological individualists and ontological holists. Secondly, to what extent social scientific explanations may and should, focus on individuals and social phenomena respectively. This issue is debated amongst methodological holists and methodological individualists. In social science and philosophy, both issues have been intensively discussed and new versions of the dispute have appeared just as new arguments have been advanced. At present, the individualism/holism debate is extremely lively and this book reflects the major positions and perspectives within the debate. This volume is also relevant to debates about two closely related issues in social science: the micro-macro debate and the agency-structure debate. This book presents contributions from key figures in both social science and philosophy, in the first such collection on this topic to be published since the 1970s.

EBOOK: Thinking Nursing Nov 28 2019 Thinking Nursing This major new textbook provides a unique one-stop resource that introduces nursing students to the disciplines that underpin nursing practice. The broad range of subjects covered includes Sociology, Psychology, Anthropology, Public Health, Philosophy, Economics, Politics and Science. Written by nursing lecturers with nursing students in mind, this book enables nurses to grasp the principles behind these disciplines and apply the concepts to everyday health care practices. Each chapter offers:

- The theoretical background of the major tenets of each discipline
- A comprehensive discussion of how they relate to practice
- Cross-references to other relevant chapter sections
- Suggestions for further reading
- A glossary of key terms.

Practical advice is also available in a chapter dedicated to methods of research, planning and construction of written work. Moreover, the textbook encourages creative and lateral thinking beyond its use in planning and writing assignments. Thinking Nursing is essential reading for nursing students on Common Foundation Programmes (both at diploma and degree level) and qualified nurses undertaking additional specialist training including masters degrees, as well as those involved in planning, designing and the implementation of educational courses for nurses.

You'll learn how to alleviate anxiety, face your fears, and overcome overwhelm--all so you can bring your ideas to life.

Ideas in Action Nov 01 2022 Contemporary political theory has become alienated from politics. It often neither discusses concrete political events nor touches the world of political action. Stephen Eric Bronner wants to change that, and Ideas in Action takes a bold step in that direction. With elegance and power, Bronner surveys 20th century political traditions. In the process, he places theories and thinkers in their social, historical, and political contexts. His sweeping presentation is organized into four imaginatively articulated phases that signal the direction of political thinking in the twentieth century. Offering distinctive interpretations and criticisms, presenting a new internationalist perspective, Bronner imbues the text with original

voices and primary sources from Adorno to Zetkin.

Humanitarian Intervention Sep 18 2021 A singular development of the post Cold-War era is the use of military force to protect human beings. From Rwanda to Kosovo, Sierra Leone to East Timor, and more recently Libya to Côte d'Ivoire, soldiers have rescued some civilians in some of the world's most notorious war zones. Could more be saved? Drawing on over two decades of research, Thomas G. Weiss answers "yes" and provides a persuasive introduction to the theory and practice of humanitarian intervention in the modern world. He examines political, ethical, legal, strategic, economic, and operational dimensions and uses a wide range of cases to highlight key debates and controversies. The updated and expanded second edition of this succinct and highly accessible survey is neither celebratory nor complacent. The author locates the normative evolution of what is increasingly known as "the responsibility to protect" in the context of the global war on terror, UN debates, and such international actions as Libya. The result is an engaging exploration of the current dilemmas and future challenges for robust international humanitarian action in the twenty-first century.
