**The Newborn Lung: Neonatology Questions and Controversies** Jul 16 2021 The Newborn Lung, a volume in Dr. Polin's Neonatology: Questions and Controversies Series, offers expert authority on the toughest challenges in neonatal pulmonology and respiratory care. This medical reference book will help you provide better evidence-based care and improve patient outcomes with research on the latest advances. Reconsider how you handle difficult practice issues with coverage that address these topics head on, offering opinions from the leading experts in the field, supported by the best available evidence. Find information quickly and easily with a consistent chapter organization. Get the most authoritative advice available from world-class neonatologists who have the inside track on new trends and developments in neonatal care. Purchase each volume individually, or get the entire 6-volume set, which includes online access that allows you to search across all titles! Stay current in practice with in-depth coverage of presentation, pathogenesis, epidemiology, and prevention of bronchopulmonary dysplasia; short and long-term outcomes of oxygenation strategies in preterm infants; and many other hot topics in neonatal respiratory care. Access the fully searchable text online at [www.expertconsult.com](http://www.expertconsult.com).

*Advanced Intelligent Systems for Sustainable Development (AI2SD'2019)* Oct 31 2022 This book contains the latest researches on advanced intelligent systems applied in the field of education presented during the second edition of the International Conference on Advanced Intelligent Systems for Sustainable Development (AI2SD'2019) held on July 08-11, 2019, in Marrakech, Morocco. The book proposes new approaches and innovative strategies for the manipulation of data and big data collected from the educational environment, exploiting the analysis tools, algorithms of artificial intelligence, and machine learning techniques, in order to extract results, which allow improving the performance and effectiveness of the education field, which is a strategic lever for sustainable development. The book deals with concepts, strategies, and approaches developed on various current axes of scientific research in the field of education, such as smart e-learning, smart education (smart classroom, smart assessment and smart teaching and learning technologies), massive open online courses (MOOC), courseware design, and development for smart learning, cloud learning, and mobile learning. The book is intended for all actors in the educational sector, namely students, professors, academic researchers, and stakeholders. It constitutes a large-scale forum for the exchange of ideas, approaches, and innovative techniques between these actors on the development and innovation of the field of education with the revolution 4.0. The authors of each chapter report the state of the art of the various topics addressed and present results of their own research, laboratory experiments, and successful applications. The purpose of this session is to share the idea of advanced intelligent systems with appropriate tools and techniques for modeling, management, and decision support in the field of education.

**Foundations of Software Science and Computational Structures** Nov 27 2019 This book constitutes the refereed proceedings of the 6th International Conference on Foundations of Software Science and Computation Structures, FOSSACS 2003, held in Warsaw, Poland in April 2003. The 26 revised full papers presented together with an invited paper were carefully reviewed and selected from 96 submissions. Among the topics covered are algebraic models; automata and language theory; behavioral equivalences; categorical models; computation processes over discrete and continuous data; computation structures; logics of programs; models of concurrent, reactive, distributed, and mobile systems; process algebras and calculi; semantics of programming languages; software specification and refinement; transition systems; and type systems and type theory.

**Molecular Biology Problem Solver** Apr 12 2021 Most research in the life sciences involves a core set of molecular-based equipment and methods, for which there is no shortage of step-by-step protocols. Nonetheless, there remains an exceedingly high number of inquiries placed to commercial technical support groups, especially regarding problems. *Molecular Biology Problem Solver: A Laboratory Guide* asks the reader to consider crucial questions, such as: Have you selected the most appropriate research strategy? Have you identified the issues critical to your successful application of a technique? Are you familiar with the limitations of a given technique? When should common procedural rules of thumb not be applied? What strategies could you apply to resolve a problem? A unique question-based format reviews common assumptions and laboratory practices, with the aim of offering a firm understanding of how techniques and procedures work, as well as how to avoid problems. Some major issues explored by the book's expert contributors include: Working safely with biological samples and radioactive materials DNA and RNA purification PCR Protein and nucleic acid hybridization Prokaryotic and eukaryotic expression systems Properly using and maintaining laboratory equipment

**Questions of Travel** Aug 29 2022 Contemporary theory is replete with metaphors of travel—displacement, diaspora, borders, exile, migration, nomadism, homelessness, and tourism to name a few. In *Questions of Travel*, Caren Kaplan explores the various metaphoric uses of travel and displacement in literary and feminist theory, traces the political implications of this “traveling theory,” and shows how various discourses of displacement link, rather than separate, modernism and postmodernism. Addressing a wide range of writers, including Paul Fussell, Edward Said, James Clifford, Gilles Deleuze, Jean Baudrillard, Gayatri Spivak, Edward Soja, Doreen Massey, Chandra Mohanty, and Adrienne Rich, Kaplan demonstrates that symbols and metaphors of travel are used in ways that obscure key differences of power between nationalities, classes, races, and genders. Neither rejecting nor dismissing the powerful testimony of individual experiences of modern exile or displacement, Kaplan asks how mystified metaphors of travel might be avoided. With a focus on theory's colonial discourses, she reveals how these metaphors continue to operate in the seemingly liberatory critical zones of poststructuralism and feminist theory. The book

concludes with a critique of the politics of location as a form of essentialist identity politics and calls for new feminist geographies of place and displacement.

**Highway Safety Literature Annual Cumulation ...** Sep 17 2021 One of a 5-volume set, each covering a broad subject, which cumulates annually all citations that appeared during the year in: Highway safety literature. In present volume, annotated entries arranged under emergency services, injuries, investigations and records, and locations. No index.

*Evaluating Voting Systems with Probability Models* Jan 22 2022 This book includes up-to-date contributions in the broadly defined area of probabilistic analysis of voting rules and decision mechanisms. Featuring papers from all fields of social choice and game theory, it presents probability arguments to allow readers to gain a better understanding of the properties of decision rules and of the functioning of modern democracies. In particular, it focuses on the legacy of William Gehrlein and Dominique Lepelley, two prominent scholars who have made important contributions to this field over the last fifty years. It covers a range of topics, including (but not limited to) computational and technical aspects of probability approaches, evaluation of the likelihood of voting paradoxes, power indices, empirical evaluations of voting rules, models of voters' behavior, and strategic voting. The book gathers articles written in honor of Gehrlein and Lepelley along with original works written by the two scholars themselves.

**Towards Improved Forecasting of Volcanic Eruptions** Mar 12 2021

**Violence Risk** Oct 26 2019 The decision to release someone from psychiatric hospital, forensic services or prison is often controversial, and forensic psychologists play a key role in assessing the risk of recidivism. In *Violence Risk*, Chris Webster and Steve Hucker discuss the accuracy of prediction and highlight how violence assessments would improve if well-established findings became entrenched in clinical and research practice. Although the authors write the majority of the text, specialist colleagues add essential material on subjects such as averting spousal assault, sex offending, and improving community support.

**Highway Safety Literature** Oct 19 2021

*Current Trends in Theoretical Computer Science* Feb 08 2021 The scientific developments at the end of the past millennium were dominated by the huge increase and diversity of disciplines with the common label OC computer scienceOCO. The theoretical foundations of such disciplines have become known as theoretical computer science . This book highlights some key issues of theoretical computer science as they seem to us now, at the beginning of the new millennium. The text is based on columns and tutorials published in the Bulletin of the European Association for Theoretical Computer Science in the period 1995OCO2000. The columnists themselves selected the material they wanted for the book, and the editors had a chance to update their work. Indeed, much of the material presented here appears in a form quite different from the original. Since the presentation of most of the articles is reader-friendly and does not presuppose much knowledge of the area, the book constitutes suitable supplementary reading material for various courses in computer science. Contents: Computational Complexity (E Allender et al.); Formal Specification (H Ehrig et al.); Login in Computer Science (Y Gurevich et al.); Concurrency (M Nielsen et al.); Natural Computing (G Rozenberg et al.); Formal Language Theory (A Salomaa et al.). Readership: Researchers, graduate students and senior undergraduates in computer science."

**Business-to-Business Brand Management** Feb 20 2022 Focuses on sensemaking, decisions, actions, and evaluating outcomes relating to managing business-to-business brands including product and service brands. This book features chapters that address aspects of the marketing mix for business-to-business and industrial marketers. It includes papers that provide brand management insights for managers.

**Small Islands, Large Questions** Jul 28 2022 This book focuses on the post-emancipation period in the Caribbean and how local societies dealt with the new socio-economic conditions. Scholars from Jamaica, the Virgin Islands, England, Denmark and The Netherlands link this era with the contemporary Caribbean.

*Springer Handbook of Geographic Information* Aug 24 2019 This handbook provides an exhaustive, one-stop reference and a state-of-the-art description of geographic information and its use. This new, substantially updated edition presents a complete and rigorous overview of the fundamentals, methods and applications of the multidisciplinary field of geographic information systems. Designed to be a useful and readable desk reference book, but also prepared in various electronic formats, this title allows fast yet comprehensive review and easy retrieval of essential reliable key information. The Springer Handbook of Geographic Information is divided into three parts. Part A, Basics and Computer Science, provides an overview on the fundamentals, including descriptions of databases and encoding of geographic information. It also covers the underlying mathematical and statistics methods and modeling. A new chapter exemplifies the emerging use and analysis of big data in a geographic context. Part B offers rigorous descriptions of gathering, processing and coding of geographic information in a standardized way to allow interoperable use in a variety of systems; from traditional methods such as geodesy and surveying to state-of-the-art remote sensing and photogrammetry; from cartography to geospatial web services. Discussions on geosemantic interoperability and security of open distributed geospatial information systems complete the comprehensive coverage. The final part describes a wide array of applications in science, industry and society at large, such as agriculture, defense, transportation, energy and utilities, health and human services. The part is enhanced by new chapters on smart cities and building information modeling, as well as a complete overview of the currently available open-source geographic information systems. Using standardized international terminology, in accordance with ISO/TC 211 and INSPIRE, this handbook facilitates collaboration between different disciplines and is a must have for practitioners and new comers in industry and academia.

**NEET/ AIIMS Objective Question Bank for Physics, Chemistry & Biology** Nov 19 2021 The book NEET/ AIIMS Objective Question Bank for Physics, Chemistry & Biology has been written exclusively to help students crack the Medical Entrance exams. The book is unique in the sense that it provides selected questions divided into 6 categories for the NEET exam. The book has been prepared in such a manner that a student can easily complete the book in a month's time. The book follows the exact pattern of the NCERT books. Thus the different sections - Physics has 29, Chemistry has 30 and Biology has 38 chapters. The Question Bank contains: • Fill in the Blanks • True/ False • Conceptual MCQs • Diagram Based Questions • Assertion Reason Based Questions • Matching Based Questions • Critical Thinking Type Questions as per the pattern of the NEET/ AIIMS exam. The book is also useful for JIPMER/ AMU/ KCET etc.

**Identity in Organizations** May 02 2020 How do people identify with organizations? What role does organizational identity play in organizational strategy? Identity in Organizations investigates the fundamental character of organizational identity and individual identification with an organization. Through the use of an unconventional, conversational format the reader is drawn into a provocative discussion among key organizational scholars that focuses on three different paradigmatic views of identity: a functionalist perspective, an interpretive perspective, and a postmodern perspective. Similarities and distinctions among these ways of understanding are explored and numerous theoretical and practical insights are gained. This groundbreaking book concludes with a discussion of the relevance of identity as a construct in organizational study and observations on conversation and theory building. Many well-known scholars participate in the conversation, including Jay Barney, Denny Gioia, Mary Jo Hatch, Stuart Albert, Anne Huff, Judi McLean Parks, and Rod Kramer. Identity in Organizations will be of interest to professionals and students of organizational studies, human resource management, industrial psychology, sociology of work, psychology, and organizational communication.

**Measuring the Subjective Well-Being of Nations** Mar 31 2020 Surely everyone wants to know the

source of happiness, and indeed, economists and social scientists are increasingly interested in the study and effects of subjective well-being. Putting forward a rigorous method and new data for measuring, comparing, and analyzing the relationship between well-being and the way people spend their time—across countries, demographic groups, and history—this book will help set the agenda of research and policy for decades to come. It does so by introducing a system of National Time Accounting (NTA), which relies on individuals' own evaluations of their emotional experiences during various uses of time, a distinct departure from subjective measures such as life satisfaction and objective measures such as the Gross Domestic Product. A distinguished group of contributors here summarize the NTA method, provide illustrative findings about well-being based on NTA, and subject the approach to a rigorous conceptual and methodological critique that advances the field. As subjective well-being is topical in economics, psychology, and other social sciences, this book should have cross-disciplinary appeal.

**Chaos in Gravitational N-Body Systems** Jan 10 2021 The Workshop on Chaos in Gravitational N -Body Systems was held in La Plata, Argentina, from July 31 through August 3, 1995. The School of Astronomy and Geophysics of La Plata National University, best known as La Plata Observatory, was the host institution. The Observatory (cover photo) was founded in 1883, and it has nowadays about 120 faculty members and 70 non-faculty members devoted to teaching and research in different areas of astronomy and geophysics. It was very nice to see how many people, from young students to well recognized authorities in the field, came to participate in the meeting. This audience success was due to the increasing understanding of the necessity to gather together people from Celestial Mechanics and Stellar Dynamics to explore the problems that exist at the frontier of these two disciplines and their common interest in chaotic phenomena and integrability (the famous Argentine beef was, certainly, also an attraction!). All the papers of the present volume were refereed. Most were accepted after some revision, while some needed no change at all (compliments to their authors!) and, sadly, a few could not be included. About half a dozen authors did not submit their contributions for publication, mainly because they were already in print elsewhere. Therefore, the special issue of Celestial Mechanics and Dynamical Astronomy includes all the invited lectures of the workshop, while the proceedings volume includes those same lectures plus the bulk of, but not all, the contributions to the meeting.

**Electronic Health Records** Feb 29 2020 This book provides an overview of the challenges in electronic health records (EHR) design and implementation along with an introduction to the best practices that have been identified over the past several years. The book examines concerns surrounding EHR use and proposes eight examples of proper EHR use. It discusses the complex strategic planning that accompanies the systemic organizational changes associated with EHR programs and highlights key lessons learned regarding health information—including technology errors and risk management concerns.

**Advances in Information Systems** Jun 26 2022 This volume contains the proceedings of the First International Conference on Advances in Information Systems (ADVIS) held in Izmir (Turkey), 25-27 October, 2000. This conference was dedicated to the memory of Professor Esen Ozkarahan. He was great researcher who made an essential contribution to the development of information systems. This conference was organized by the Computer - Engineering Department of Dokuz Eylul University of Izmir. This department was established in 1994 by the founding chairman Professor Ozkarahan and there he worked for the last few years of his life. The main goal of the conference was to bring together researchers from all around the world working in different areas of information systems to share new ideas and to represent their latest

results. We received 80 submissions from 30 countries. The Program Committee selected 44 papers for presentation at the conference. The invited and accepted contributions cover a large variety of topics: - neral aspects of information systems, data bases, data warehousing, computer networks, Internet technologies, content-based image retrieval, information - retrieval, constraint programming and artificial intelligence. The success of the conference was dependent upon the hard work of a large number of people. We gratefully acknowledge the members of the Program Committee who helped to coordinate the process of refereeing all submitted papers. We also thank all the other specialists who reviewed the papers.

**The Power to Transform** Jul 04 2020 In this important new book, Stephanie Pace Marshall argues that by focusing on reforming the contents of schooling and not transforming the context and conditions of learning, we have created false proxies for learning and eroded the potentially vibrant intellectual life of our schools. Finishing a course and a textbook has come to mean achievement. Listening to a lecture has come to mean understanding. Getting a high score on a standardized test has come to mean proficiency. Credentialing has come to mean competence. To educate our children wisely requires that we create generative learning communities, by design. Such learning communities have their roots in meaning, not memory; engagement, not transmission; inquiry, not compliance; exploration, not acquisition; personalization, not uniformity; interdependence, not individualism; collaboration, not competition; and trust, not fear.

**Regularity Problem for Quasilinear Elliptic and Parabolic Systems** Sep 29 2022 The smoothness of solutions for quasilinear systems is one of the most important problems in modern mathematical physics. This book deals with regular or strong solutions for general quasilinear second-order elliptic and parabolic systems. Applications in solid mechanics, hydrodynamics, elasticity and plasticity are described. The results presented are based on two main ideas: the universal iterative method, and explicit, sometimes sharp, coercivity estimates in weighted spaces. Readers are assumed to have a standard background in analysis and PDEs.

**English Questions** Aug 17 2021 The intellectual reversals of the recent period. The book concludes with a survey of the political conjuncture after the fall of Thatcher, which considers the prospects of the Labour Party within the context of the wider changes that have reshaped European social democracy in these years.

**Information Systems, Logistics, and Supply Chain** May 14 2021 This book constitutes revised selected papers from the 6th International Conference on Information Systems, Logistics, and Supply Chains, ILS 2016, held in Bordeaux, France, in June 2016. The conference deals with topics related to supply chain design and management, information and decision-making systems, and innovative practices in logistics. It also encompasses issues such as sustainability, societal impact, uncertainty, and collaboration in supply chain management. The 13 full papers presented were carefully reviewed and selected for inclusion in this volume and reflect the diverse challenges and opportunities experienced in logistics, information and supply chain management. They were organized in topical sections named: transportation and logistics; supply chain planning; collaboration and operations in supply chain; and applications of supply chain topics to business environments (case studies).
