[Evaluation and Design of ODOT's Type 5 Guardrail with Tubular Backup](#) Jun 24 2019 The purpose of this project was to assess the performance of both the ODOT GR-2.2 guardrail and the ODOT GR-3.4 transition system under NCHRP Report 350 test level 3 (TL-3) conditions, propose any modifications that would improve their crashworthiness and, ultimately ensure that the final designs qualify for use on the National Highway System (NHS) as TL-3 systems. Finite element analyses of the guardrail and transition system were performed using the LS-DYNA finite element software to simulate NCHRP Report 350 Test 3-10 and Test 3-11 impact scenarios. The analysis results indicated that the original ODOT GR-2.2 guardrail would successfully meet all NCHRP Report 350 test level 3 safety criteria. The analyses also indicated that the performance of the system could be significantly improved with simple modifications to the guardrail. The integrated system of the Nested Type 5 Guardrail with Tubular Backup and the ODOT GR-3.4 transition was considered the most practical and feasible design improvement and was therefore recommended as a final design.

[Draping Period Costumes](#) Dec 23 2021 One way of creating a theatrical costume is called flat patterning. This is when a costume designer uses a pattern made to the wearer's measurements to cut out and sew together a costume. In many cases flat patterning is the more appropriate method for creating a period costume - skirts, pants, and sleeves, for example. However, working in two-dimensions often does not translate correctly onto a three-dimensional dress form or person.

Often a designer will need to tweak style lines on a garment once they see it worn, or a costume will need a quick adjustment right before going on stage. In those cases, designers need to know how to correctly drape a costume. Draping is also the best way to construct a period costume right from the start. The construction of garments in earlier centuries often constricted movement, especially in the area of the armhole. The very different size and proportions of contemporary people compared to those in previous centuries makes the use of period patterns difficult. A well-draped garment can give the impression of period accuracy while permitting the wearer greater freedom of movement. Having a mock-up pinned to the form in its early stages is quicker and easier to adapt than drafting a flat pattern, cutting it out of muslin and sewing it. It also provides the opportunity for greater creativity and adaptation as well as a better understanding of what fabric

will and won't do. In *Draping Period Costumes*, Sharon Sobel explains in step-by-step detail the basics of draping and demonstrates the use of those basic skills in the creation of a representative selection of period costumes from a variety of time periods. Chapters are broken into time periods and have two parts: an analysis of how clothing was made and worn during that specific time period, and detailed instruction on draping techniques to construct the costume. Copiously illustrated, images allow this visual audience to easily follow along with detailed instructions. A part of the *Costume Topics* series, this book will be 256 pages, a snazzy 8.25 x 7.5 trim size, and spiral bound-a format consistently requested by our audience so that they can lay the book flat while working from it. Covers sizing, necessary tools, and basic rules of draping, along with more specific draping assignments Includes draping examples from a variety of historical periods, including ancient Greece/Rome, Gothic, Tudor, Elizabethan, Neoclassical, Victorian, and more! Heavily illustrated with full color images that show each stitch and seam

Defining the Nation? Nov 21 2021 Katharina Nötzold explores whether and how mass media can contribute to nation-building after civil war. Drawing on the example of Lebanon's audiovisual media organisations, which are mostly privately owned by politicians, she demonstrates how political elites use television to transmit their visions of post-war society. Lebanon's nation-building process from 1990 to 2005 was characterized by Syrian dominance over political life. From an extensive content analysis of Lebanese news and interviews with analysts, journalists and managers from all Lebanese TV stations, it emerges that political information on television focused more on divisive experiences than cohesive ones. This has underpinned continued sectarianism in Lebanon, in the media as in society at large, and has impeded nationbuilding.

Power Systems Protection, control & automation Feb 10 2021 This book provides practical applications of numerical relays for protection and control of various primary equipment namely distribution and transmission networks, HV and EHV transformers and busbars, reactive and active power plants. Unlike other books attempts have been made to address the subject from practical point of view rather than theoretical one which can otherwise be found in most of other text books. The setting, design and testing philosophy of numerical relays as discussed in this book have been successfully applied in the fields on various projects and consequently can be used as a practical guideline for implementation on future projects. The book covers the followings subjects: · Fundamental concepts in the field of power system protection and control; · Required system modelling and fault level analysis for the design and setting of protection and control devices; · Setting and design philosophy of numerical relays of different primary equipment; · Practical application of anti-islanding schemes for two different systems namely distribution generation (DG) and transmission generation (TG); · Challenges and solutions which are encountered during secondary equipment refurbishment/replacement in brown field substations with inclusion of two practical case studies; · Required tests for factory acceptance tests (FAT), site acceptance tests (SAT), and commissioning tests of numerical relays in conventional and digital substations; · Causes, analysis and proposed mitigation techniques of more than 100 worldwide disturbances which have occurred in different type of primary equipment which have resulted to major system black out or plant explosion or even fatality and; · New and future trend of application of numerical relays including application of super IED for protection and control of multi-primary equipment, implementation of digital substation, remote integrations, self and remote testing of IED, distribution networks fault location techniques and fault locators using travelling waves, synchro phasors, time domain line protection using travelling waves, adaptive slope characteristics of differential protection, protection and control schemes of micro grids, mitigation technique for prevention of loss of reactive power plants and transformers due to solar storms.

Hard-Science Linguistics Jul 18 2021 The impossibility of testing the depth hypothesis of 1960 of a connection between the complexities of grammar and a limited human temporary memory led to questioning the ancient grammatical foundations of linguistics and to developing standard hard-science foundations. This volume is the first detailed report on how to reconstitute linguistics on the new hard-science foundation laid by Victor H. Yngve in 1996. Hard-science (human) linguistics is the scientific study of how people communicate. It studies people and also communicative energy flow and other relevant parts of the physical environment. It studies the real world, not the world of language, and it develops theories testable against real-world evidence as is standard in the hard sciences. Hard-science linguistics takes its rightful place connecting the humanities and social sciences to biology, chemistry and physics. Thus linguistics becomes a natural science and contributes to the unity of science. This unity is clearly evident in the research reported here by these fifteen pioneering authors from diverse areas as they work to reconstitute linguistics as a true hard science.
