Bitemporal Data Jun 03 2020 Bitemporal data has always been important. But it was not until 2011 that the ISO released a SQL standard that supported it. Currently, among major DBMS vendors, Oracle, IBM and Teradata now provide at least some bitemporal functionality in their flagship products. But to use these products effectively, someone in your IT organization needs to know more than how to code bitemporal SQL statements. Perhaps, in your organization, that person is you. To correctly interpret business requests for temporal data, to correctly specify requirements to your IT development staff, and to correctly design bitemporal databases and applications, someone in your enterprise needs a deep understanding of both the theory and the practice of managing bitemporal data. Someone also needs to understand what the future may bring in the way of additional temporal functionality, so their enterprise can plan for it. Perhaps, in your organization, that person is you. This is the book that will show the do-it-yourself IT professional how to design and build bitemporal databases and how to write bitemporal transactions and queries, and will show those who will direct the use of vendor-provided bitemporal DBMSs exactly what is going on "under the covers" of that software. Explains the business value of bitemporal data in terms of the information that can be provided

by bitemporal tables and not by any other form of temporal data, including history tables, version tables, snapshot tables, or slowly-changing dimensions. Provides an integrated account of the mathematics, logic, ontology and semantics of relational theory and relational databases, in terms of which current relational theory and practice can be seen as unnecessarily constrained to the management of nontemporal and incompletely temporal data. Explains how bitemporal tables can provide the time-variance and nonvolatility hitherto lacking in Inmon historical data warehouses. Explains how bitemporal dimensions can replace slowly-changing dimensions in Kimball star schemas, and why they should do so. Describes several extensions to the current theory and practice of bitemporal data, including the use of episodes, "whenever" temporal transactions and queries, and future transaction time. Points out a basic error in the ISO's bitemporal SQL standard, and warns practitioners against the use of that faulty functionality. Recommends six extensions to the ISO standard which will increase the business value of bitemporal data. Points towards a tritemporal future for bitemporal data, in which an Aristotelian ontology and a speech-act semantics support the direct management of the statements inscribed in the rows of relational tables, and add the ability to track the provenance of database content to existing bitemporal databases. This book also provides the background needed to become a business ontologist, and explains why an IT data management person, deeply familiar with corporate databases, is best suited to play that role. Perhaps, in your organization, that person is you.

The Cutting Edge Sep 06 2020 This book offers a number of ground rules for being successful at work, based on Eastern philosophies and martial arts, at the heart of which lies the right balance between reason and intuition. Concepts such as efficiency, the overall picture, proactive behaviour, breathing, the here and now, peace, freeing yourself of hindrances and perceiving what is true are the underlying principles of the classic Eastern martial arts, but they can also be directly applied to modern (business)life. The ground rules in this book are all you need to teach yourself to use your own strength to find the right answer to any situation in this constantly changing world and to be able to enjoy your work more, with less stress and strain. They lead to inner peace and give an insight into the overall picture. Achieving success no longer requires an effort - instead it becomes a state of being. Bjørn Aris has been studying the art of Eastern fighting and Zen philosophies for more than 35 years. After a 12 year career in

investment banking, he moved on to become a successful entrepreneur, and since 2000 he has been working as a trainer and advisor to business executives in the corporate world. By effectively fusing Eastern wisdom with Western knowledge he has created the Mental Bridging (c) training programme, which makes sure you achieve better results with less effort or stress and more pleasure. Scientifically validated through academic studies in 2007 and 2012, it received an innovation award in 2013. More than 10,000 participants from 60 different countries have attended and benefitted from Bjørn's workshops

Cutting Edge May 15 2021 *What's the Deal with Teens and Time Management?* May 03 2020 Time management is a challenge for everyone, but it is a particularly daunting challenge for middle and high school students. There is an expectation that at their age they should be independent and know how to get things done on their own. But teens are busier than ever. Between homework, school, afterschool activities, family, friends, jobs, and more, teens often find that their time is truly NOT their own. Add in the fact that they often lack the tools to manage their time; maybe it's a little unrealistic for parents to expect their teenagers to instinctively know how to manage time. "What's the Deal with Teens and Time Management" takes parents step-by-step through the basics of teaching their teens the time management skills they need to succeed-at school, at work and in life! This is a user-friendly guide full of best practice solutions for helping teens stay on top of their homework, avoid procrastination traps, get out the door in the morning with minimal conflict and manage the use of their electronics. In a readable, breezy and witty fashion, Josel opens the door to the world of time management, what it really means, why it's important and why your teen probably doesn't "get it." And throughout the book, Josel offers up the "Triple Ts" - her tried and true Tips, Tools and Techniques - to provide support and guidance for parents looking to help their teens understand, develop and implement time management skills. In this book, you'll learn: The FIVE mindsets parents need to start their teen on the journey of time management awareness. How to create a "Personal Homework Profile" to better understand how your teen tackles homework. How to help your teen create a time sense and develop "future awareness." How to pick an appropriate paper or electronic academic planner and how to properly plan their time. How to create a

Practice and Theory for Materials Development in L2 Learning Mar 01 2020 This volume represents a unique addition to the growing body of empirical literature on materials development, adopting a reverse approach to the topic. Rather than applying 'theory to practice', practitioners and researchers from 11 countries reappraise applied linguistics theories through practice. The book also provides evidence for the diversity of materials development around the globe at different

levels for different specialities and for different purposes. Each chapter surveys the relevant literature (such as task-based learning and language and culture), describes a specific research project, reports the results of the project, and discusses the implications of these results for the development of materials both in the local context and in general. After each section there are editorial comments highlighting the issues emerging from the research, and there is a conclusion which connects the findings of the various chapters and makes suggestions both for future research and for the principled development of materials for L2 learners. The book will be suitable for teachers, materials developers, academics and students in post-graduate courses in applied linguistics, in TEFL/TESOL and in the teaching of other languages as an L2.
