Climate Change and U.S. Cities Sep 22 2021 From roads to clean water systems, the built infrastructure sustaining urban populations is increasingly vulnerable to climate. Understanding the dilemma and identifying a path forward is particularly important as cities are significant agents of climate action. A follow-up to the Fourth National Climate Assessment (NCA), Climate Change and U.S. Cities documents the current and future climate risk for U.S. cities, urban systems, and their residents. It is an examination of research findings since early 2012, with a critical emphasis on the cross-cutting factors of economics, equity, and governance. Urban stakeholders and decision makers will gain an understanding of climate risks and a set of conclusions and recommendations for action. Climate Change and U.S. Cities boldly lays out the tools that cities must harness to effect decisive, meaningful change.

Feasible Planet - A Guide to More Sustainable Living Jun 27 2019 Are you concerned about the state of our planet and hope that governments and corporations will find a sustainable way for us to live? If you do not think about it too hard, that may work, but will it? Left on their own, with drivers of

popularity and profits, I am not too convinced that it will. The missing part of this equation is you and me. Individuals who believe that corporations and governments can do better. Individuals who believe that through action, we can buy a bit more time to develop and implement solutions to our critical issues. Did I hear a groan out there when you read the word ' actions ' ? Do not worry! Most of the actions that I am referring to will not only help save the planet, but will benefit you right away through saving money, time, better health, and having a happier life in general. Sustainability goes beyond controlling our consumption and pollution. There are key social, political, and economic areas that need to be addressed as well, and there are several steps that individuals can take to help in these areas. For those of you who feel we could do more, this book is for you and is loaded with actionable activities, the reasons for doing them, and explores why we are not doing them already. Every journey starts with a first step. Hopefully this book will lead to those first sustainable steps and that will change the world.

Actual Energy Consumption in Dwellings Oct 04 2022 Residential buildings have continuously improved in energy efficiency, partly as a consequence of the introduction of energy regulations in many countries. Although better thermal properties and systems efficiency have lowered energy consumption for space heating in recent decades, substantial differences in energy consumption in similar dwellings are still being observed. These differences in consumption are thought to be caused by differences in occupancy patterns, by quality of construction and by rebound effects. This research addresses the effect of energy performance regulations and occupant behaviour on energy consumption for space and water heating in dwellings built after the introduction of the energy performance regulations in the Netherlands. The results of this research show that improving the energy efficiency of buildings alone is not enough to decrease that energy consumption.

Ecothrifty Aug 10 2020 A guide to saving a fortune while saving the Earth, from the author of Homegrown & Handmade. Use it up, wear it out, make it do, or do without. Our grandmothers knew the importance of responsible, thrifty choices.
