PERSUB Reference Manual May 30 2022 This report describes the PERSUB Subroutine System. PERSUB is a set of matrix-oriented subroutines developed primarily for the purpose of providing the researcher a maximum of flexibility in designing a sequence of analyses to be carried out on research data. With a few minor exceptions, the system is written entirely in FORTRAN. The report contains a listing of the source program and a brief description of each subroutine. The system was originally developed for use on a 16K IBM 7040 with two channels, three tape units per channel, and one disk unit. It should compile and run with few modifications on any similar configuration with a larger core or additional peripheral units. (Author).
