Scandinavian Immigrants in New York, 1630-1674 ... Aug 09 2020

Problems and Solutions in Quantum Chemistry and Physics Sep 21 2021 Two hundred and eighty problems, with detailed solutions, plus 139 exercises, all covering quantum mechanics, wave mechanics, angular momentum, molecular spectroscopy, scattering theory, and related subjects. "An excellent problem book . . . I would highly recommend it as a required supplement to students taking their first quantum chemistry course." — Journal of the American Chemical Society.

Solaris Solutions for System Administrators Oct 11 2020 Teaches how to work smart and avoid the many pitfalls of managing Solaris systems Covers the latest release of Solaris, Solaris 9, as well as earlier versions Written by experts with years of Solaris experience Packed with practical, hands-on solutions to tough problems, showing how to avoid

costly mistakes Tackles managing system performance; the Sun Fire line of Solaris enterprise servers; installing, configuring, and patching Solaris; and ensuring security

An Essay towards the probable solution of this question, whence come the Stork, the Turtle, the Crane, and the Swallow ... **By a person of learning and piety** Feb 01 2020

Sun Performance and Tuning Nov 04 2022 This book is an indispensable reference for developers and administrators who want to maximize the performance of their Sun systems. Revised and updated to cover the latest SPARC and software release (including Solaris 2.6). This book presents a collaboration of configuration and performance information not available anywhere else.

Energy Research Abstracts Jul 28 2019

Triggered Nov 11 2020 ALEX KAYNE NEVER STOPS RUNNING When a cop is framed for a crime, Alex Kayne comes to town to bring justice to the powerless. But there's more happening here than even she could plan for. Digging in to help her client reveals corruption that goes all the way to the top. WHAT DO YOU DO WHEN THE GOVERNMENT ITSELF IS THE BAD GUY? Alex finds herself facing down a corrupt Congressman and mafia muscle as she struggles to bring justice for her client--and to stay ahead of the growing list of people trying to bring her down. Agents Eric Symon and Julia Mayher also make their return, on Alex Kayne's trail, and bringing an offer for Kayne to come in out of the cold--an invitation to join Historic Crimes. More action. More thrills. More running. Alex Kayne may have triggered the wrong people this time.

Is the Holocaust Vanishing? Mar 16 2021 Is the Holocaust Vanishing? explores the ramifications of the passing of survivors for Holocaust studies, the removal of the Jew from Holocaust studies, and what all of this means for Jewish identity after the Holocaust. The book consists of years of reflection and wrestling with these issues on the part of a man who is a Holocaust survivor, a rabbi, and a professor of Holocaust studies.

An Introductory Guide to Computational Methods for the Solution of Physics Problems Jan 02 2020 This monograph presents fundamental aspects of modern spectral and other computational methods, which are not generally taught in traditional courses. It emphasizes concepts as errors, convergence, stability, order and efficiency applied to the solution of physical problems. The spectral methods consist in expanding the function to be calculated into a set of appropriate basis functions (generally orthogonal polynomials) and the respective expansion coefficients are obtained via collocation equations. The main advantage of these methods is that they simultaneously take into account all available information, rather only the information available at a limited number of mesh points. They require more complicated matrix equations than those obtained in finite difference methods. However, the elegance, speed, and accuracy of the spectral methods more than compensates for

any such drawbacks. During the course of the monograph, the authors examine the usually rapid convergence of the spectral expansions and the improved accuracy that results when nonequispaced support points are used, in contrast to the equispaced points used in finite difference methods. In particular, they demonstrate the enhanced accuracy obtained in the solution of integral equations. The monograph includes an informative introduction to old and new computational methods with numerous practical examples, while at the same time pointing out the errors that each of the available algorithms introduces into the specific solution. It is a valuable resource for undergraduate students as an introduction to the field and for graduate students wishing to compare the available computational methods. In addition, the work develops the criteria required for students to select the most suitable method to solve the particular scientific problem that they are confronting.

Nonlinear Waves, Solitons and Chaos Jan 26 2022 The second edition of a highly successful book on nonlinear waves, solitons and chaos.

Shakespeare the Englishman Dec 01 2019

Computational Studies, Nanotechnology, and Solution Thermodynamics of Polymer Systems Mar 04 2020 This text is the published version of many of the talks presented at two symposiums held as part of the Southeast Regional Meeting of the American Chemical Society (SERMACS) in Knoxville, TN in October, 1999. The Symposiums, entitled Solution Thermodynamics of Polymers and Computational Polymer Science and Nanotechnology, provided outlets to present and discuss problems of current interest to polymer scientists. It was, thus, decided to publish both proceedings in a single volume. The first part of this collection contains printed versions of six of the ten talks presented at the Symposium on Solution Thermodynamics of Polymers organized by Yuri B. Melnichenko and W. Alexander Van Hook. The two sessions, further described below, stimulated interesting and provocative discussions. Although not every author chose to contribute to the proceedings volume, the papers that are included faithfully represent the

scope and quality of the symposium. The remaining two sections are based on the symposium on Computational Polymer Science and Nanotechnology organized by Mark D. Dadmun, Bobby G. Sumpter, and Don W. Noid. A diverse and distinguished group of polymer and materials scientists, biochemists, chemists and physicists met to discuss recent research in the broad field of computational polymer science and nanotechnology. The two-day oral session was also complemented by a number of poster presentations. The first article of this section is on the important subject of polymer blends. M. D.

Classical Mechanics Jul 20 2021 The series of texts on Classical Theoretical Physics is based on the highly successful courses given by Walter Greiner. The volumes provide a complete survey of classical theoretical physics and an enormous number of worked out examples and problems.

CRC Handbook of Phase Equilibria and Thermodynamic Data of Copolymer Solutions Oct 23 2021 Ten years after the debut of the expansive CRC Handbook of Thermodynamic Data of Copolymer Solutions, The CRC Handbook of Phase Equilibria and Thermodynamic Data of Copolymer Solutions updates and expands the world's first comprehensive source of this vital data. Author Christian Wohlfarth, a chemical thermodynamicist specializing in phase equilibria of polymer and copolymer solutions and a respected contributor to the CRC Handbook of Chemistry and Physics, has gathered up-to-the-minute data from more than 500 newly published references. Fully committed to ensuring the reliability of the data, the author included only results with published or personally communicated numerical values. With volumetric, calorimetric, and various phase equilibrium data on more than 450 copolymers and 130 solvents, this handbook furnishes: 150 new vapor-liquid equilibrium datasets 50 new tables containing classical Henry's coefficients 250 new liquid-liquid equilibrium datasets 350 new high-pressure fluid phase equilibrium 70 new PVT-properties datasets 40 new enthalpic datasets Expanded second osmotic virial coefficients data table Carefully organized, clearly presented, and fully referenced, The Handbook of Phase Equilibria and Thermodynamic Data of Copolymer

Solutions will prove a cardinal contribution to the open literature and invaluable to anyone working with copolymers.

Nuclear Science Abstracts May 18 2021

Annual Review of Nuclear Science Feb 12 2021 Online version (Annual Reviews), lists issues for Annual review of nuclear science under succeeding journal title.

England's Jewish Solution Apr 04 2020 A detailed study of Jewish settlement and of seven different Jewish communities in England 1262-90.

Official Report of the National Australasian Convention Debates Aug 21 2021

Reasoning Across Domains Jun 30 2022 Evolutionary psychology's goal is to understand the design of the human mind. This book examines the arguments put forth by evolutionary psychologists and the objections levelled against them by their critics.

Theory of One-Dimensional Vlasov-Maxwell Equilibria Jun 06 2020

This book describes and contextualises collisionless plasma theory, and in particular collisionless plasma equilibria. The Vlasov-Maxwell theory of collisionless plasmas is an increasingly important tool for modern plasma physics research: our ability to sustain plasma in a steady-state, and to mitigate instabilities, determines the success of thermonuclear fusion power plants on Earth; and our understanding of plasma aids in the prediction and mitigation of Space Weather effects on terrestrial environments and satellites. Further afield, magnetic reconnection is a ubiquitous energy release mechanism throughout the Universe, and modern satellites are now able to make in-situ measurements with kinetic scale resolution. To keep pace with these challenges and technological developments, a modern scientific discussion of plasma physics must enhance, and exploit, its 'literacy' in kinetic theory. For example, accurate analytical calculations and computer simulations of kinetic instabilities are predicated on a knowledge of Vlasov-Maxwell equilibria as an initial condition. This book highlights new fundamental work on Vlasov-Maxwell equilibria, of potential interest to mathematicians and physicists alike. Possible applications involve two of

the most significant magnetic structures known to confine plasma and store energy: current sheets and flux tubes.

Solved Problems in Classical Mechanics Feb 24 2022 simulated motion on a computer screen, and to study the effects of changing parameters. --

Hospitality Upgrade Nov 23 2021

The Two-Faced Queen Jan 14 2021 "Under the protection of the Orbis Mercenary company, Michael and his family and friends are deeply involved in the seemingly rival conspiracies that are tearing The Hollows apart. With the death of the King, both the Corrupt Prince and his sister Serena are vying for the throne, while the Rebel Emperor is spreading lies amongst the people, and all of them want Michael dead"--

A Comprehensive Guide to Enterprise Mobility Oct 03 2022

Although enterprise mobility is in high demand across domains, an absence of experts who have worked on enterprise mobility has resulted in a lack of books on the subject. A Comprehensive Guide to Enterprise Mobility fills this void. It supplies authoritative guidance on all aspects of enterprise mobility-from technical aspects and applications to

Bound Jun 18 2021 A brutal home invasion shocks the nation. A man is murdered, his wife bound, gagged and left to watch. When Detective Sam Shephard scratches the surface, the victim is not all he seems to be. When the evidence points to Dunedin's most hated criminals, the case seems cut and dried, until the body count starts to rise. Police procedural.

Spreading Factors in Nuclear Resonance Width Measurement and Precise Determination of Resonance Energies Oct 30 2019

Human Resource Development and Information Technology May 06 2020

Technology, people, e-workplaces: these are the elements that fast moving organizations use to meet changing business requirements by using technology to invent new business processes, to re-align organizational structures, and to implement new management practices. Moreover, it has become apparent in today's global information economy, the most critical-indeed the primary-resource that

distinguishes market leaders from everyone else is human talent! Countries, communities, and organizations are suddenly very interested in developing the human capacities that will allow them to compete in a networked world. Successful growing organizations have placed the combined development of information technology and human resources as their top priority. With the help of human resource professionals, organizations must grasp the pertinent aspects of both people and technology issues to create an effective e-workplace. These issues occur at the intersection of the disciplines of computer science, operation research, and human resource development. Because these issues are complex, they can best be understood through cross-disciplinary collaboration among experts who approach them from a range of perspectives. Human Resource Development and Information Technology: Making Global Connections presents just such a collaborative effort from leaders in the field. This book describes the changes that are occurring as technology plays a more central role in human resource development. It compares methods and tools that organizations can use to create their own practices for developing their most critical resource-people! In addition, the authors pose a set of interesting research questions that will help us further explore how countries, local communities, and organizations build dynamic systems for developing a sustained competitive advantage with human talent.

Symon Petliura. Facts Against Myths (Russian Edition) Apr 16 2021 Was Simon Petliura an anti-Semite? Did he organize pogroms of the Jewish population of Ukraine, or simply instilling them, or on the contrary, struggled with these acts of barbarism in every possible way? Was the assassination of Petliura an act of spontaneous revenge, or a well-planned operation? Who benefited from the death of the head of the Ukraine? How did Jews behave and feel about the independent Ukrainian state? For these and many other questions, the author gives detailed answers on the pages of this book, with the help of declassified documents and memoirs of contemporaries Simon Petliura.

Computers in Engineering Apr 28 2022

Michael Symon's Playing with Fire Sep 09 2020 Cohost of The Chew and celebrated Iron Chef and restaurateur Michael Symon returns to a favorite subject, meat, with his first cookbook focused on barbecue and live-fire grilling, with over 70 recipes inspired by his newest restaurant, Mabel's BBQ, in his hometown of Cleveland. In preparing to open his barbecue restaurant, Mabel's BBQ, Michael Symon enthusiastically sampled smoked meat from across America. The 72 finger-licking, lip-smacking recipes here draw inspiration from his favorites, including dry ribs from Memphis, wet ribs from Nashville, brisket from Texas, pork steak from St. Louis, and burnt ends from Kansas City--to name just a few--as well as the unique and now signature Cleveland-style barbecue he developed to showcase the flavors of his hometown. Michael offers expert guidance on working with different styles of grills and smokers, choosing aromatic woods for smoking, cooking various cuts of meat, and successfully pairing proteins with rubs, sauces, and sides. If you are looking for a new guide to classic American barbecue with the volume turned to high, look no further.

Cumulated Index Medicus Jul 08 2020

Qualitative Organizational Research Sep 02 2022 Electronic Inspection Copy available for instructors here This comprehensive text brings together in one volume both consideration of the core methods

available for undertaking qualitative data collection and analysis, and discussion of common challenges faced by all researchers in conducting qualitative research. Qualitative Organizational Research: Core Methods and Common Challenges contains 27 chapters, each written by an expert in the area. The first part of the volume considers common challenges in the design and execution of qualitative research, examining key contemporary debates in each area as well as providing practical advice for those undertaking organizational research. The second part of the volume looks at contemporary uses of core qualitative methods in organizational research, outlining each method and illustrating practical application through empirical examples. Written by internationally renowned experts in qualitative research methods, this text is an accessible and essential resource for students and researchers in the areas of organization studies, business and management research, and organizational psychology. Key features:

- Coverage of all the key topics in qualitative research
- Chapters written by experts drawing on their personal experiences of using methods
- Introductory chapters outlining the context for qualitative research and the philosophies which underpin it

Gillian Symon is Reader in Organizational Psychology at Birkbeck, University of London. Catherine Cassell is Professor of Organizational Psychology at Manchester Business School.
