Gender Differences at Critical Transitions in the Careers of Science, Engineering, and Mathematics Faculty Jul 18

2021 Gender Differences at Critical Transitions in the Careers of Science, Engineering, and Mathematics Faculty presents new and surprising findings about career differences between female and male full-time, tenure-track, and tenured faculty in science, engineering, and mathematics at the nation's top research universities. Much of this congressionally mandated book is based on two unique surveys of faculty and departments at major U.S. research universities in six fields: biology, chemistry, civil engineering, electrical engineering, mathematics, and physics. A departmental survey collected information on departmental policies, recent tenure and promotion cases, and recent hires in almost 500 departments. A faculty survey gathered information from a stratified, random sample of about 1,800 faculty on demographic characteristics, employment experiences, the allocation of institutional resources such as laboratory space, professional activities, and scholarly productivity. This book paints a timely picture of the status of female faculty at top universities, clarifies whether male and female faculty have similar opportunities to advance and succeed in academia, challenges some commonly held views, and poses several questions still in need of answers. This book will be of special interest to university administrators and faculty, graduate students, policy makers, professional and academic societies, federal funding agencies, and others concerned with the vitality of the U.S. research base and economy.

Re-imagining Curriculum Mar 02 2020 The book argues that academics, academic developers and academic leaders need

to undertake curriculum work in their institutions that has the potential to disrupt common sense notions about curriculum and create spaces for engagement with scholarly concepts and theories, to re?imagine curricula for the changing times. Now, more than ever in the history of higher education, curriculum practices and processes need to be shared; the findings of research undertaken on curriculum need to be disseminated to inform curriculum work. We hope the book will enable readers to look beyond their contextual difficulties and constraints, to find spaces where they can dream, and begin to implement, innovative and creative solutions to what may seem like intractable challenges or difficulties.

Where Futures Converge Jun 24 2019 The evolution of the

most innovative square mile on the planet: the endless cycles of change and reinvention that created today's Kendall

Square. Kendall Square in Cambridge, Massachusetts, has

been called "the most innovative square mile on the planet."

It's a life science hub, hosting Biogen, Moderna, Pfizer,

Takeda, and others. It's a major tech center, with Google,

Microsoft, IBM, Amazon, Facebook, and Apple all

occupying big chunks of pricey office space. Kendall Square

also boasts a dense concentration of startups, with leading

venture capital firms conveniently located nearby. And of

course, MIT is just down the block. In *Where Futures*

Converge, Robert Buderer offers the first detailed account of

the unique ecosystem that is Kendall Square, chronicling the

endless cycles of change and reinvention that have driven its

evolution. Buderer, who himself has worked in Kendall

Square for the past twenty years, tells fascinating stories of

great innovators and their innovations that stretch back two

centuries. Before biotech and artificial intelligence, there was

railroad car innovation, the first long-distance telephone call,

the Polaroid camera, MIT's once secret, now famous Radiation Laboratory, and much more. Buderer takes readers on a walking tour of the square and talks to dozens of innovators, entrepreneurs, urban planners, historians, and others. He considers Kendall Square's limitations—it's "gentrification gone rogue," by one description, with little affordable housing, no pharmacy, and a scarce middle class—and its strengths: the "human collisions" that spur innovation. What's next for Kendall Square? Buderer speculates about the next big innovative enterprises and outlines lessons for aspiring innovation districts. More important, he asks how Kendall Square can be both an innovation hub and diversity, equity, and inclusion hub. There's a lot of work still to do.
