Seraffyn's Mediterranean Adventure Jan 18 2022 Join Lin and Larry onboard their cruising cutter Seraffyn as they explore the history-laden waters of the Mediterranean Sea. For three years they meandered under sail, eastward from the rocky monolith of Gibraltar to the imposing stone ramparts of Malta. They share stories here of the kaleidoscope of people who filled their days along the way: from the British military officers who joined them for races to the officials who turned them into smugglers (not of drugs but of a boat-full of yeast, flower, vegetables and propane - and eventually twenty dollars worth of noodles!) Lin's warmhearted storytelling will draw you into their cruising life and reveal the secrets that kept this well-known couple wandering the watery reaches of the world for more than forty years. Lin and Larry paid for their apparent freedom by working along the way - delivering and repairing yachts, and writing for magazines around the world. Their motto - Go Small, Go Simple, Go Now - has inspired thousands of potential voyagers to stop dreaming and set out to sea. "The Pardeys weave a tale of people and anecdotes that makes for marvelous armchair cruising. If you've read earlier works, you won't be disappointed. If you're new to the spell of the Pardeys, this will surely hook you." -- Yachting

Sniper Jun 30 2020 Sniper is the behind-the-scenes story of one of the most frightening rampages to occur in U.S. history—and how it was stopped. For more than three weeks, the nation watched in disbelief as Washington, D.C., and its surrounding suburbs were held hostage by anonymous gunmen shooting innocent civilians at random. Sniper is the definitive account of those alleged gunmen, John Muhammad and Lee Boyd Malvo, and the massive manhunt that ended with their capture by a heavily armed SWAT team in an early-morning raid at an interstate highway rest stop. Two Washington Post reporters, Sari Horwitz and Michael E. Ruane, retrace the steps of Muhammad and Malvo from their first meeting on the island of Antigua to Malvo's defiant confession in a Virginia jail. Drawing on exclusive reporting about that confession, internal police documents, and a wide range of law-enforcement sources, Horwitz and Ruane track in remarkable detail the murderous trail Muhammad and Malvo are accused of having followed to the Washington area and reconstruct the eerie way in which the two moved invisibly around the nation's capital in the midst of one of the largest police investigations in U.S. history. Horwitz and Ruane also take you inside the police command center where local and state police, joined by the federal government's most experienced crime fighters, worked desperately to stop the killings, unaware that a fundamental error—investigators were wrongly fixated on a white van—was allowing Muhammad and Malvo to slip through the dragnet. We meet FBI negotiators, veteran detectives, forensics experts, prosecutors, and politicians who faced perhaps the biggest challenge of their careers as they confronted frustrating setbacks, logistical nightmares, and the overwhelming pressure of a high-stakes investigation. In a fast-paced narrative that outdoes even the most acclaimed television cop shows, Sniper recounts the extraordinary police work that enabled investigators to quickly exploit the clues handed to them by Muhammad and Malvo that finally led to their arrest. Part gripping drama, part real-life portrait of law enforcement at work, Sniper is also a cautionary tale about the vulnerability of American society in an age of terrorism.

Technological Change in a Spatial Context Nov 16 2021 This book represents a selection of contributions to the Regional Science Association, European Summer Institute, held at Arco, Lake of Garda, Italy, from 17th to 23rd July 1988 on the theme of 'Theories and policies of technological development at the local level'. As such it forms a complementary volume to the collection of invited papers entitled 'The Spatial Context of Technological Development', edited by Professors Riccardo Cappellin and Peter Nijkamp, and published by Avebury/Gower. The Summer Institute covered a broad range of themes and contributions from over 100 researchers. It has therefore not been our intention to represent or replicate these themes directly, but to provide as wide an international coverage of current research in regional science in the field of technological change as possible. The papers to be found in this book are drawn from the European Community, Eastern Europe, Scandinavia, North America and elsewhere. Inevitably, as the book was to be published in English, most of the editorial work has been undertaken at the Centre for Urban and Regional Development Studies at Newcastle University. In so doing, we have attempted to standardize the English as far as possible, whilst trying not to lose the characteristics of the styles of the individual authors.

When the Menorah Fades Feb 19 2022 When the Menorah Fades is a fictionalized account of the town of Hadiach, Ukraine, a small Jewish community destroyed by Nazi occupation during World War II. Based on interviews with the surviving residents of Hadiach, Zvi Preigerzon imagines the everyday experiences of ordinary Jewish people during the war. Interweaved with Hebrew and Yiddish expressions and songs, biblical metaphors, and Kabbalistic spiritual elements, a story emerges: resistance in the face of unimaginable cruelty. A former prisoner of Stalin's Gulag, Preigerzon wrote this book in complete secrecy, even hiding its existence from his own family. It was originally published under a pen name in Hebrew in 1966 and now appears in English with an introduction by the author's grandson.

Internet of Things Security: Principles and Practice Mar 20 2022 Over the past few years, Internet of Things has brought great changes to the world. Reports show that, the number of IoT devices is expected to reach 10 billion units within the next three years. The number will continue to rise and wildly use as infrastructure and housewares with each passing day. Therefore, ensuring the safe and stable operation of IoT devices has become more important for IoT manufacturers. Generally, four key aspects are involved in security risks when users use typical IoT products such as routers, smart speakers, and in-car entertainment systems, which are cloud, terminal, mobile device applications, and communication data. Security issues concerning any of the four may lead to the leakage of user sensitive data. Another problem is that most IoT devices are upgraded less frequently, which leads it is difficult to resolve legacy security risks in short term. In order to cope with such complex security risks, Security Companies in China, such as Qihoo 360, Xiaomi, Alibaba and Tencent, and companies in United States, e.g. Amazon, Google, Microsoft and some other companies have invested in security teams to conduct research and analyses, the findings they shared let the public become more aware of IoT device security-related risks. Currently, many IoT product suppliers have begun hiring equipment evaluation services and purchasing security protection products. As a direct participant in the IoT ecological security research project, I would like to introduce the book to anyone who is a beginner that is willing to start the IoT journey, practitioners in the IoT ecosystem, and practitioners in the security industry. This book provides beginners with key theories and methods for IoT device penetration testing; explains various tools and techniques for hardware, firmware and wireless protocol analysis; and explains how to design a secure IoT device system, while providing relevant code details.

Around the World in 57 1/2 Gigs May 30 2020 The strengths of Bidini’s two best-loved books, *On a Cold Road* and *Tropic of Hockey*, music and travel to unlikely places, come together in this account of his search for rock ‘n’ roll. When it looks as if the Rheostatics are breaking up after more than twenty years together, Dave Bidini is left feeling adrift from his moorings and decides to go on a very long road trip, playing solo and finding out about the state of rock ‘n’ roll around the world. Accompanied much of the way by his friend Al, who also has a solo act, Bidini sets out for London, England, his springboard for travel to Finland, Russia, China, Sierra Leone, and Ghana, punctuated by trips to Newfoundland and Gananoque in Canada, and to New York City. What Bidini finds is that the rock ‘n’ roll machine has not yet flattened the globe, as each place has taken what suits it from the West’s dominant music and ignored the rest. Metal may have had its heyday in North America, but it still suits the quiet Finns just fine as a soundtrack for suicidal thoughts. In China, where Bidini plays with the Rheos-Not-Rheos as part of the Maple Rhythm Festival, he has to coach the crowd sitting quietly in plastic chairs how to clap rhythmically. In Russia, where live rock still lurks in hard-to-find places, the British band Smokie is far more popular than even the Rolling Stones, and the first Western band Mongolian audiences wanted to hear live was Boney M. In Africa, Bidini finds out just how far rock has wandered from its roots, and in Newfoundland, just how true it has stayed. Peopled with hosers, the über-hip, and the profoundly baffled, and brimming with tales of playing in strange venues to bemused locals and the odd drunk, *Around the World* takes readers on an unforgettable, ear-opening swing through the world of rock ‘n’ roll.

Fundamentals of Spatial Information Systems Jun 18 2019 The study and application of spatial information systems have been developed primarily from the use of computers in the geosciences. These systems have the principle functions of capturing, storing, representing, manipulating, and displaying data in 2-D and 3-D worlds. This book approaches its subject from the perspectives of informatics and geography, presenting methods of conceptual modeling developed in computer science that provide valuable aids for resolving spatial problems. This book is an essential textbook for both students and practitioners. It is indispensable for academic geographers, computer scientists, and the GIS professional. Serves as the first comprehensive textbook on the field of Spatial Information Systems (also known as Geographic Information Systems) Contains extensive illustrations Presents numerous detailed examples

Sonic Warfare Apr 28 2020 An exploration of the production, transmission, and mutation of affective tonality—when sound helps produce a bad vibe. Sound can be deployed to produce discomfort, express a threat, or create an ambience of fear or dread—to produce a bad vibe. Sonic weapons of this sort include the “psychoacoustic correction” aimed at Panama strongman Manuel Noriega by the U.S. Army and at the Branch Davidians in Waco by the FBI, sonic booms (or “sound bombs”) over the Gaza Strip, and high-frequency rat repellants used against teenagers in malls. At the same time, artists and musicians generate intense frequencies in the search for new aesthetic experiences and new ways of mobilizing bodies in rhythm. In *Sonic Warfare*, Steve Goodman explores these uses of acoustic force and how they affect populations. Traversing philosophy, science, fiction, aesthetics, and popular culture, he maps a (dis)continuum of vibrational force, encompassing police and military research into acoustic means of crowd control, the corporate deployment of sonic branding, and the intense sonic encounters of sound art and music culture. Goodman concludes with speculations on the not yet heard—the concept of unsound, which relates to both the peripheries of auditory perception and the unactualized nexus of rhythms and frequencies within audible bandwidths.

Partial Stories Jun 23 2022 “Partial Stories takes readers to Malawi, where roughly one in twenty women can expect to die of a pregnancy or childbirth complication, despite decades of safe-motherhood programs. The stories of these mothers are told in hospitals and villages, by chiefs and doctors, herbalists and nurses, epidemiologists and healers, and competing explanations proliferate. The mothers’ stories are used by elders for technical education and moral instruction at a coming-of-age-ritual, a district hospital’s mortality review, and in the reflected glow of a computer screen at an international conference. After orienting readers to urban Malawi’s context of therapeutic pluralism and material scarcity, Claire Wendland discusses the ways various experts account for maternal death, showing how their diverse explanations reflect competing visions of the past and shared concerns about social change. She looks to a series of

pregnancy-related deaths in order to consider bodies as biosocial phenomena, shaped from before birth by history and social inequality. Wendland reveals an uneven therapeutic landscape that pushes experts to improvise, clinically and ethically. Their creative, essential, and sometimes deadly improvisations ask us to reconsider the "best practice" dogmas of global health and transnational research, as well as the nature of medical authority and expertise. Wendland demonstrates how strategies of legitimization render care more dangerous and knowledge more partial than it might otherwise be"--

Mexico's Economic Dilemma Aug 25 2022 Written by two leading scholars, this book provides a detailed analysis of Mexico's political economy. James M. Cypher and Raúl Delgado Wise begin with an examination of Mexico's pivotal economic crisis of the 1980s and the consequent turn toward an export-led economy, later anchored by NAFTA. They show how Mexico, after abandoning frequently successful past practices of state-led development, disastrously tied its future to an unconditional reliance on foreign corporations to promote an export-led growth strategy. Focusing on Mexico's cheap labor export model, the authors use the maquiladora sector and the auto industry as case studies of the perils of globalization—the "race to the bottom" as capital becomes ever more international. The government's unconstrained free-market policies, they convincingly argue, have resulted in a fragmented economy marked by stagnation, falling wages, informal part-time employment, and massive migration, which define daily life for all but a tiny minority.

Lifeline From The Sky: The Doctrinal Implications Of Supplying An Enclave From The Air Oct 27 2022 This paper seeks to answer the following question: What are the doctrinal imperatives of providing effective airlift support to enclaves? Doctrinal imperatives are those necessary and sufficient propositions that describe the optimal way to employ airlift forces in support of an enclave. In short, this paper attempts to determine the best way to conduct airlift operations to support enclaves. The primary conclusion of this paper is that four fundamental factors influence airlift operations: requirement to capability ratio, threat, support infrastructure, and weather. The second conclusion is that there are two basic methods to employ airlift forces: continuous flow and surge methods. The additional doctrinal imperatives contained in the conclusion relate to the interactions among the four factors affecting airlift operations to support enclaves and the ways in which they influence the two employment methods. Evidence used to derive the doctrinal propositions came from the Luftwaffe's attempt to resupply the German Sixth Army at Stalingrad from the air, the Berlin Airlift, and the airlift to the Khe Sanh garrison in the Vietnam War.
