Today, both medical practitioners and specialists need quick access to information on "bone problems" in order to help patients and their families. Therefore this book deals with everything from the basic physiology of bone and mineral metabolism to the utility of radiologic imaging and specialized tests in bone diagnosis and current treatment recommendations. Manual of Cable Osteosyntheses Aug 24 2022 In bone surgery it is essential to compress fractures interfragmentarily in order to make them resistant to the tensile force of muscles and the force resulting from acceleration and deceleration. This can be best achieved by the use of cable tension bands as a traction mechanism. The cable tension band is - in terms of stability of fractures - far superior to the conventional rigid cerclage wire which has been widely used in osteosynthesis for over 100 years. The author explains the biomechanics of the tension band in detail. Theoretical findings are confirmed by clinical test results. All osteosynthetic techniques which can be carried out with cables are described giving details of operation instructions. Errors and risks are always pointed out. A reference book and operative manual at a time.

The Osteoporosis Manual Oct 26 2022 This comprehensive manual covers all aspects of the prevention, diagnosis and management of osteoporosis, offering an upbeat and optimistic assessment of what can be achieved. While scientifically based, the book provides easy-to-follow guidelines for lifelong maintenance of skeletal structure and function. Osteoporosis is preventable, and every doctor in every medical discipline can contribute to this goal. And though prevention is better than cure, it is never too late for effective therapy, as outlined in this book. Bone is every doctor's and every body's business!

Self Observation Nov 15 2021 This book is an in-depth examination of the much needed process of "self" study known as self observation. We live in an age where the "attention function" in the brain has been badly damaged by TV and computers-up to 90 percent of the public under age 35 suffers from attention-deficit disorder! This book offers the most direct, non-pharmaceutical means of healing attention dysfunction. The methods presented here are capable of restoring attention to a fully functional and powerful tool for success in life and relationships. This is also an age when humanity has lost its connection with conscience. When humanity has poisoned the Earth's atmosphere, water, air and soil, when cancer is in epidemic proportions and is mainly an environmental illness, the author asks: What is the root cause? And he boldly answers: Failure to develop conscience! Selfobservation, he asserts, is the most ancient, scientific, and proven means to develop this crucial inner guide to awakening and a moral life. This book is for the lay-reader, both the beginner and the advanced student of self observation. No other book on the market examines this practice in such detail. There are hundreds of books on self-help and meditation, but almost none on self-study via self-observation, and none with the depth of analysis, wealth of explication, and richness of experience which this book offers. Red Hawk, author of 5 collections of poetry, was the Hodder Fellow at Princeton University (1992-93) and is currently a full professor at the University of Arkansas, Monticello. He has practiced self-observation for over 30 years, under the guidance of the Gurdjieff Society of Arkansas, meditation master Osho Rajneesh, and spiritual teacher, Lee Lozowick.

Law and Order Feb 24 2020 Law and order has become a key issue throughout the world. Crime stories saturate the mass media and politicians shrilly compete with each other in a race to be the toughest on crime. Prisons are crammed to bursting point, and police powers and resources extended repeatedly. After decades of explosive increase in crime rates, these have plummeted throughout the Western world in the 1990s. Yet fear of crime and violence, and the security industries catering for these anxieties, grow relentlessly. This book offers an up-to-date analysis of these contemporary trends by providing all honest and concerned citizens with a concise yet comprehensive survey of the sources of current problems and anxieties about crime. It shows that the dominant tough law and order approach to crime is based on fallacies about its nature, sources, and what works in terms of crime control. Instead it argues that the growth of crime has deep-seated causes, so that policing and penal policy at best can only temporarily hold a lid down on offending. The book is intended to inform public debate about these vital issues through a critical deconstruction of prevailing orthodoxy. With its focus on current policies, problems and debates this book is also an excellent introduction to criminology for the growing numbers of students of the subject at all levels.

Going to (and With) the Dogs Jun 10 2021 The rollicking and often poignant adventures of a family, hell-bent on discovering what lies just over the horizon and willing to walk, ride, paddle, and crawl to get there. From the Outer Banks to the wild Pacific Rim, from the Canadian Rockies to the Gulf of Mexico-few areas of the continent have been spared the footprints, tent stakes, and occasional trespasses of these intrepid travelers. Blizzards, bears, angry moose, and tippy canoes were their lifetime companions, and they stared them all down with the appropriate degree of terror and ineptitude. These adventures take the reader on a journey across country as well as a journey through time. As the miles and years slip by, the travelers were reduced to three-the author and his wife and their loyal dog, Sophie. Now it was time to travel more slowly, to paddle quietly through canoe country and ponder the meaning of life, death and the unknown, destinations still beckoning beyond the horizon.
