Bioremediation of Agricultural Soils Dec 31 2019 The quality of agricultural soils are always under threat from chemical contaminants, which ultimately affect the productivity and safety of crops. Besides agrochemicals, a new generation of substances invades the soil through irrigation with reclaimed wastewater and pollutants of organic origin such as sewage sludge or cattle manure. Emerging pollutants such as pharmaceuticals, nanomaterials and microplastics are now present in agricultural soils, but the understanding of their impact on soil quality is still limited. With focus on in situ bioremediation, this book provides an exhaustive analysis of the current biological methodologies for recovering polluted agricultural soils as well as monitoring the effectiveness of bioremediation.

Sterile Services Department Feb 10 2021 Provides guidance to help health planners, estates and facilities managers, sterile services managers and capital planning and design teams to plan and design a sterile services department. It discusses the objectives of a sterile services department (SSD) and service requirements, particularly focusing on: raising standards in decontamination services by optimising the built environment: service requirements strategy: calculating the optimum capacity of an SSD to eradicate bottlenecks: determining the most appropriate location of an SSD. Design guidance based on the above service objectives is outlined. Finally, the finer details of the individual spaces within an SSD are discussed.

Breaking the Bargain Jun 24 2019 In Breaking the Bargain, Donald J. Savoie reveals how the traditional deal struck between politicians and career officials that underpins the workings of our national political and administrative process is today being challenged.

The Texas Experience Apr 02 2020 "There is something to be said for experience. Between the two of us, the authors of this text have over five decades of teaching Texas government in the classroom, and almost that many years writing about it. But in our rapidly changing world, the ability to adapt to change is fundamentally important. Among the most notable agents of change in Texas government over the last decade has been the successful launch of the Texas Tribune, an online newspaper devoted to covering Texas politics with an emphasis on helping readers not only know but understand what is happening with the state's government. This non-partisan endeavor is the largest organization covering state politics anywhere. They are experts at providing analysis and process vast data sets into usable content. With our experience and the Tribune's analysis and immediacy, our aim is to create content that is readable, up-to-date, and meaningful to you as a student. You will have the opportunity to engage in Texas government instead of simply reading a textbook. The narrative text you'll find here covers the key concepts in Texas government. But to get the full Texas Experience with current Texas Tribune content integrated, you'll want to access the title in Revel. There you will find interactive resources that will bring the course to life, illustrate how these core concepts affect you and your community every day, help you become an informed consumer of the news, and empower you to make a difference in state and local politics now and throughout your life. Our approach in writing this book is simple. First, be realistic. Texas politics is less a debate about ideology and theory than it is a pragmatic discussion of what works"--

Childhood Acute Lymphoblastic Leukemia Mar 14 2021 This book provides a comprehensive and up-to-date review of all aspects of childhood Acute Lymphoblastic Leukemia, from basic biology to supportive care. It offers new insights into the genetic pre-disposition to the condition and discusses how response to early therapy and its basic biology are utilized to develop new prognostic stratification systems and target therapy. Readers will learn about current treatment and outcomes, such as immunotherapy and targeted therapy approaches. Supportive care and management of the condition in resource poor countries are also discussed in detail. This is an indispensable guide for research and laboratory scientists, pediatric hematologists as well as specialist nurses involved in the care of childhood leukemia.

Life Lessons May 16 2021 A radical agenda to make our education system fit for the twenty-first century Our education system has been damaged by politicians who have arrogantly imposed a regime of market-driven reforms. It is time to reframe education as an essential public good, one arising from a hunger to find more engaging ways to learn and the powerful imperative to make our society genuinely equal. In this timely and provocative essay, Melissa Benn argues for a National Education Service. Like the NHS, the NES would provide the framework for a life-long entitlement to education: from early-years provision to apprenticeships, universities and adult education. It should be free at the point of delivery. It should nurture teachers and scholarship, moving beyond an obsession with exam results to create fully rounded, questioning citizens. Its eventual aim should be an integrated, comprehensive system available to all.

Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation Jan 30 2020 This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.

Dietary Reference Intakes for Vitamin A, Vitamin K, Arsenic, Boron, Chromium, Copper, Iodine, Iron, Manganese, Molybdenum, Nickel, Silicon, Vanadium, and Zinc Dec 23 2021 This volume is the newest release in the authoritative series issued by the National Academy of Sciences on dietary reference intakes (DRIs). This series provides recommended intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for individuals based on age and gender. In addition, a new reference intake, the Tolerable Upper Intake Level (UL), has also been established to assist an individual in knowing how much is "too much" of a nutrient. Based on the Institute of Medicine's review of the scientific literature regarding dietary micronutrients, recommendations have been formulated regarding vitamins A and K, iron, iodine, chromium, copper, manganese, molybdenum, zinc, and other potentially beneficial trace elements such as boron to determine the roles, if any, they play in health. The book also: Reviews selected components of food that may influence the bioavailability of these compounds. Develops estimates of dietary intake of these compounds that are compatible with good nutrition throughout the life span and that may decrease risk of chronic disease where data indicate they play a role. Determines Tolerable Upper Intake levels for each nutrient reviewed where adequate scientific data are available in specific population subgroups. Identifies research needed to improve knowledge of the role of these micronutrients in human health. This book will be important to professionals in nutrition research and education.

Anti-Neutrophil Cytoplasmic Antibody (ANCA) Associated Vasculitis May 28 2022 This volume, written by well-known experts in the field, covers all aspects of Anti-Neutrophil Cytoplasmic Antibody (ANCA) Associated Vasculitis (AAV). The expression refers to a group of diseases, characterized by destruction and inflammation of small vessels. The clinical signs vary and affect several organs, such as the kidney, lung, skin, nervous system and others. The opening chapters give some historical hints, explain the genetic basis of the disease and provide insights into the pathogenesis derived from recent experimental studies and guides the reader through classification and nomenclature. A large part of the book is then devoted to a detailed description of the specific related diseases and their clinical presentations, the disease course, and potential complications. The advice regarding treatment is based on the best currently available evidence in this constantly evolving area. The book is part of Springer's series Rare Diseases of the Immune System, which presents recently acquired knowledge on pathogenesis, diagnosis, and therapy with the aim of promoting a more holistic approach to these conditions. AAVs are systemic autoimmune diseases of unknown cause that affect small (to medium) sized blood vessels. They include granulomatosis with polyangiitis (formerly Wegener's granulomatosis), microscopic polyangiitis, and eosinophilic granulomatosis with polyangiitis (formerly Churg–Strauss syndrome). This volume will be an invaluable source of up-to-date information for all practitioners involved in the care of patients with these diseases.
