Partnering with Parents in Elementary School Math Aug 25 2019
How to build productive relationships in math education I wasn't taught this way. I can't help my child! These are common refrains from parents and guardians, who are often overwhelmed, confused, and frustrated about how to best support their children with what they see as the "new math." Partnering With Parents in Elementary School Math provides educators with long overdue guidance on how to communicate with families about their children's learning. Readers will find guidance on how to: - Understand what fuels parents' anxieties and concerns - Set parents' expectations about their children's math instruction and homework - Communicate clearly and productively about students' mathematical progress, strengths, and needs - Run informative and fun family events - Coach parents to portray a productive disposition at home

Integrating the Visual Arts Across the Curriculum Mar 01 2020

With lots of examples and color images, this resource is both a foundational text and a practical guidebook for bringing contemporary art into elementary and middle school classrooms as a way to make learning joyful and meaningful for all learners.

Marshall shows how asking questions and posing problems spark curiosity and encourage learners to think deeply and make meaningful connections across the curriculum. At the center of this approach is creativity, with contemporary visual art as its inspiration. The text covers methods of creative inquiry-based learning, art and how it connects to the “big ideas” addressed by academic domains, flexible structures teachers can use for curriculum development, creative teaching strategies using contemporary art, and models of art-based inquiry curriculum. Book Features: Provides research-based project ideas and curriculum models for arts integration. Shows how Project Zero’s flexible structures and frameworks can be used to develop creative inquiry and an arts integration curriculum. Explains how contemporary visual art connects to the four major disciplines—science, mathematics, social studies, and language arts. Includes full-color

images of contemporary art that are appropriate for elementary and middle school learners. Demonstrates how arts integration can and should be substantive, multidimensional, and creative.

A Guide to Teaching Elementary Science Apr 13 2021 Nationally and internationally, educators now understand the critical importance of STEM subjects—science, technology, engineering, and mathematics. Today, the job of the classroom science teacher demands finding effective ways to meet current curricula standards and prepare students for a future in which a working knowledge of science and technology will dominate. But standards and goals don't mean a thing unless we: • grab students' attention; • capture and deepen children's natural curiosity; • create an exciting learning environment that engages the learner; and • make science come alive inside and outside the classroom setting. *A Guide to Teaching Elementary Science: Ten Easy Steps* gives teachers, at all stages of classroom experience, exactly what the title implies. Written by lifelong educator Yvette Greenspan, this book is designed for busy classroom teachers who face tough conditions, from overcrowded classrooms to shrinking budgets, and too often end up anxious and overwhelmed by the challenges ahead and their desire for an excellent science program. This book: • helps teachers develop curricula compatible with the Next Generation Science Standards and the Common Core Standards; • provides easy-to-implement steps for setting up a science classroom, plus strategies for using all available resources to assemble needed teaching materials; • offers detailed sample lesson plans in each STEM subject, adaptable to age and ability and designed to embrace the needs of all learners; and • presents bonus information about organizing field trips and managing science fairs. Without question, effective science curricula can help students develop critical thinking skills and a lifelong passion for science. Yvette Greenspan received her doctorate degree in science education and has developed science curriculum at all levels. A career spent in teaching elementary

students in an urban community, she now instructs college students, sharing her love for the teaching and learning of science. She considers it essential to encourage today's students to be active learners and to concentrate on STEM topics that will help prepare them for the real world.

Using Music to Enhance Student Learning Jun 15 2021

Integrating musical activities in the elementary school classroom can assist in effectively teaching and engaging students in Language Arts, Science, Math, and Social Studies, while also boosting mental, emotional and social development. However, many elementary education majors fear they lack the needed musical skills to use music successfully. Future elementary school teachers need usable, practical musical strategies to easily infuse into their curriculum. Written for both current and future teachers with little or no previous experience in music, *Using Music to Enhance Student Learning, Second Edition* offers strategies that are not heavily dependent on musical skills. While many textbooks are devoted to teaching music theory skills, this textbook is dedicated to pedagogy – the actual teaching of music – particularly in those schools without a separate music class in their curriculum. The ultimate goal is for future teachers to provide their elementary school classes with engaging learning experiences. These learning experiences are clearly presented to enable children to acquire knowledge in all subject areas within a joyful, creative environment rich with music activities. New to the second edition are the animated listening maps, more audio tracks, a new guitar unit, expanded coverage in the recorder unit, a connection with visual art and music, expanded activities in American history and math, and updated research and statistics. **SPECIAL FEATURES** Animated "Listening Maps" help listeners focus on music selections through clear visual representations of sound. Group Activities reinforce the social aspects of music-making, as well as the benefits of collaborative teaching and learning. A thorough integration of music in the

curriculum establishes that music is essential in a child's development, and that the incorporation of music will enhance all other subjects/activities in the classroom. Learning Aids include "Tantalizing Tidbits of Research," which provide the justifications for why these activities are important, as well as "Teaching Tips," and "Thinking It Through" activities. The Using Music Package Streamed listening selections from the Baroque, Classical, Romantic, and Contemporary Periods Get America Singing... Again! Volume 1 (developed in association with the Music Educators National Conference, now NAFME, and other music organizations) with 43 songs that represent America's varied music heritage of folk, traditional, and patriotic themes Appendices include a songbook with Hispanic folksongs, a recorder music songbook and a guitar unit Companion website hosts various teaching and learning resources ISBN 978-0-367-11067-3 Using Music, Second Edition set includes: ISBN 978-0-415-70936-1 Using Music, Second Edition textbook Get America Singing... Again! Volume 1 songbook ISBN 978-0-429-02487-0 Using Music, Second Edition eBook is the textbok only. The songbook is only available with the print textbook and is not sold separately.

The Kilburn Manual of Elementary Teaching Oct 27 2019

Minnesota Guide for Self-appraisal and Improvement of Elementary Schools Oct 08 2020

Abc's of Elementary Education: Jul 29 2022 Throughout the 20th Century theorists and teachers argued about the best way to teach reading. In California, when the whole language approach was in vogue, many teachers were forced to ignore phonics. I said forced and this was true. Either they had to teach phonics secretly or they would be insulted, degraded, and intimidated to teach using whole language. I ignored it like I had every other dictate that came from above that I knew was the latest way to teacher-proof the curriculum. Many children who could have benefited from an auditory method of learning reading were crippled in their decoding skills. In Los Angeles in the Sixties teachers had to teach a phonics lesson every day, but the sight word method was totally ignored. A teacher could be in trouble if he emphasized the sight words. At the time I started teaching I was only vaguely aware of the importance of the 220 most frequently used words. It was when I began to teach Special Education children did I discover the importance of these words. I incorporated teaching them into my reading and spelling lessons and for years they were the basis of my great successes at teaching first graders to decode far beyond their grade level. They also became the mainstay of my SIGHT, SOUND, TOUCH Reading System kit. When I read about the teacher who used language, a writing approach to reading, I tried it. Instead of forcing them to read books, she helped them write their own. They read the one they wrote, plus they eagerly read those written by their classmates. I did it and it worked. (I will be using this approach during the 2000-2001 school year with Hispanic fourth graders who are the lowest in

reading.) With some of my Special Education children I found that TOUCH worked. I had them writing words and sentences in the sandbox. It worked. Another reading method that worked was having the children listen to tapes of the books they were expected to read. In San Bernardino I worked for months dictating all the mandatory and supplemental readers, the science and social studies textbooks up to the fourth grade level. I would have these placed in listening centers with up to six headphones. This worked too. The truth was that everything worked, but some children learned easier and faster with one method than with another. Since I did not have an accurate way to diagnose which child learned best with each method of presentation, I used them all. I found that instead of arguing which was best that everyone benefited from a wide variety of materials and techniques. I would emphasize one for a few weeks and then go to another. It was very effective. In ABCs I discuss each approach and how I used it. My spelling method was very briefly discussed in the magazine THE INSTRUCTOR in 1980. It is easy to do and the children love it. Especially the days they get to Challenge Dr. Rose! They look up words in any dictionary and I have to try and spell it. They have to give me the same clues that I give them every day. They must pronounce it correctly, give me the number of letters in the word, break it into syllables and give the number of letters in each, and give me the definition. With those clues I can spell almost any word, but they love to stump me, which they do. Besides spelling they learn new words while they use a dictionary. After years of frustration trying to put on plays I began to write my own. I had experienced the frustration of long plays with a huge cast so every child had some lines. I was tired of screaming at the children who were bored, inattentive, and got into mischief because they were waiting around to say their lines. I had academic work for them, but the action on the stage was distracting and I was busy as THE Director! My plays we

Resources for Teaching Elementary School Science Mar 13 2021

What activities might a teacher use to help children explore the life cycle of butterflies? What does a science teacher need to conduct a "leaf safari" for students? Where can children safely enjoy hands-on experience with life in an estuary? Selecting resources to teach elementary school science can be confusing and difficult, but few decisions have greater impact on the effectiveness of science teaching. Educators will find a wealth of information and expert guidance to meet this need in *Resources for Teaching Elementary School Science*. A completely revised edition of the best-selling resource guide *Science for Children: Resources for Teachers*, this new book is an annotated guide to hands-on, inquiry-centered curriculum materials and sources of help in teaching science from kindergarten through sixth grade. (Companion volumes for middle and high school are planned.) The guide annotates about 350 curriculum packages, describing the activities involved and what students learn. Each annotation lists recommended grade levels, accompanying materials and kits or suggested equipment, and ordering information. These 400 entries were reviewed by both educators and scientists to ensure that they are accurate and current and offer students the opportunity to: Ask questions and find their own answers. Experiment productively. Develop patience, persistence, and confidence in their own ability to solve real problems. The entries in the curriculum section are grouped by scientific area—"Life Science, Earth Science, Physical Science, and Multidisciplinary and Applied Science"—and by type—"core materials, supplementary materials, and science activity books. Additionally, a section of references for teachers provides annotated listings of books about science and teaching, directories and guides to science trade books, and magazines that will help teachers enhance their students' science education. *Resources for Teaching Elementary School Science* also lists by region and state about 600 science centers, museums, and zoos where teachers can take students for interactive science experiences. Annotations highlight

almost 300 facilities that make significant efforts to help teachers. Another section describes more than 100 organizations from which teachers can obtain more resources. And a section on publishers and suppliers give names and addresses of sources for materials. The guide will be invaluable to teachers, principals, administrators, teacher trainers, science curriculum specialists, and advocates of hands-on science teaching, and it will be of interest to parent-teacher organizations and parents.
