Historical Activity Theory (CHAT). CHAT analyses how people and organisations learn to do something new, and how both individuals and organisations change. The theoretical and methodological tools used have their origins in the work of Lev Vygotsky and A.N. Leont'ev. In recent years this body of work has aroused significant interest across the social sciences, management and communication studies. Working as part of an integrated international team, the authors identify specific findings which are of direct interest to the academic community, such as: the analysis of vertical learning between operational and strategic levels within complex organizations; the refinement of notions of identity and subject position within CHAT; the introduction of the concept of 'labour power' into CHAT; the development of a method of analysing discourse which theoretically coheres with CHAT and the design of projects. Activity Theory in Practice will be highly useful to practitioners, researchers, students and policy-makers who are interested in conceptual and empirical issues in all aspects of 'activity-based' research.

The Theory and Practice of Social Machines Oct 25 2021 Social machines are a type of network connected by interactive digital devices made possible by the ubiquitous adoption of technologies such as the Internet, the smartphone, social media and the read/write World Wide Web, connecting people at scale to document situations, cooperate on tasks, exchange information, or even simply to play. Existing social processes may be scaled up, and new social processes enabled, to solve problems, augment reality, create new sources of value, and disrupt existing practice. This book considers what talents one would need to understand or build a social machine, describes the state of the art, and speculates on the future, from the perspective of the EPSRC project SOCIAM - The Theory and Practice of Social Machines. The aim is to develop a set of tools and techniques for investigating, constructing and facilitating social machines, to enable us to narrow down pragmatically what is becoming a wide space, by asking 'when will it be valuable to use these methods on a sociotechnical system?' The systems for which the use of these methods adds value are social machines in which there is rich person-to-person communication, and where a large proportion of the machine's behaviour is constituted by human interaction.

Health Economics from Theory to Practice Jun 08 2020 This book provides a robust set of health economic principles and methods to inform societal decisions in relation to research, reimbursement and regulation (pricing and monitoring of performance in practice). We provide a theoretical and practical framework that navigates to avoid common biases and suboptimal outcomes observed in recent and current practice of health economic analysis, as opposed to claiming to be comprehensive in covering all methods. Our aim is to facilitate efficient health system decision making processes in research, reimbursement and regulation, which promote constrained optimisation of community outcomes from a societal perspective given resource constraints, available technology and processes of technology assessment. Importantly, this includes identifying an efficient process to maximize the potential that arises from research and pricing in relation to existing technology under uncertainty, given current evidence and associated opportunity costs of investment. Principles and methods are identified and illustrated across health promotion, prevention and palliative care settings as well as treatment settings. Health policy implications are also highlighted.

Practice Theory and Education Aug 30 2019 Practice Theory and Education challenges how we think about 'practice', examining what it means across different fields and sites. It is organised into four themes: discursive practices; practice, change and organisations; practising subjectivity; and professional practice, public policy and education. Contributors to the collection engage and extend practice theory by drawing on the legacies of diverse social and cultural

theorists, including Bourdieu, de Certeau, Deleuze and Guattari, Dewey, Latour, Marx, and Vygotsky, and by building on the theoretical trajectories of contemporary authors such as Karen Barad, Yrjo Engestrom, Andreas Reckwitz, Theodore Schatzki, Dorothy Smith, and Charles Taylor. The proximity of ideas from different fields and theoretical traditions in the book highlight key matters of concern in contemporary practice thinking, including the historicity of practice; the nature of change in professional practices; the place of discursive material in practice; the efficacy of refiguring conventional understandings of subjectivity and agency; and the capacity for theories of practice to disrupt conventional understandings of asymmetries of power and resources. Their juxtaposition also points to areas of contestation and raises important questions for future research. Practice Theory and Education will appeal to postgraduate students, academics and researchers in professional practice and education, and scholars working with social theory. It will be of particular interest to those who wish to move beyond the limiting configurations of practice found in contemporary neoliberal, new managerialist and narrow representationalist discourses.

Theory and Practice in the Bioarchaeology of Care Jul 10 2020 This book provides the first comprehensive introduction to, and explanation of, the theory and practice of the 'bioarchaeology of care', an original, fully theorised and contextualised case study-based approach designed to identify and interpret cases of care provision in prehistory. The applied methodology comprises four stages of analysis, each building on the content of the preceding one(s), which provide the framework for this process. Theory and Practice in the Bioarchaeology of Care is the primary source of information on this new approach and serves as a manual for its implementation. It elaborates the foundations on which the bioarchaeology of care is constructed; it leads the reader through the methodology; and it provides three detailed examples of prehistoric caregiving which illustrate how bioarchaeology of care analysis has the capacity to reveal aspects of past group and individual identity and lifeways which might otherwise have remained unknown.

Prosodic Theory and Practice Aug 11 2020 An introduction to the the range of current theoretical approaches to the prosody of spoken utterances, with practical applications of those theories. Prosody is an

extremely dynamic field, with a rapid pace of theoretical development and a steady expansion of its influence beyond linguistics into such areas as cognitive psychology, neuroscience, computer science, speech technology, and even the medical profession. This book provides a set of concise and accessible introductions to each major theoretical approach to prosody, describing its structure and implementation and its central goals and assumptions as well as its strengths and weaknesses. Most surveys of basic questions in prosody are written from the perspective of a single theoretical framework. This volume offers the only summary of the full range of current theoretical approaches, with practical applications of each theory and critical commentary on selected chapters. The current abundance of theoretical approaches has sometimes led to apparent conflicts that may stem more from terminological differences, or from differing notions of what theories of prosody are meant to achieve, than from actual conceptual disagreement. This volume confronts this pervasive problem head on, by having each chapter address a common set of questions on phonology, meaning, phonetics, typology, psychological status, and transcription. Commentary is added as counterpoint to some chapters, with responses by the chapter authors, giving a taste of current debate in the field. Contributors Amalia Arvaniti, Jonathan Barnes, Mara Breen, Laura C. Dilley, Grzegorz Dogil, Martine Grice, Nina Grønnum, Daniel Hirst, Sun-Ah Jun, Jelena Krivokapić, D. The Theory and Practice of Development Education Feb 03 2020 Development education is much more than learning about

development; it is a pedagogy for the globalised societies of the twenty-first century that incorporates discourses from critical pedagogy and postcolonialism, and a mechanism for ensuring that differing perspectives are reflected within education, particularly those from developing countries. Learning about development and global issues is now part of the school curriculum in a number of countries, and terms such as global citizenship, sustainable development and cultural understanding are commonplace in many educational contexts. Development education has been recognised as one of the educational discourses that has influenced the acceptance of these terms, for both policy-makers and practitioners. This groundbreaking volume addresses the history, theoretical influences, practices and impact of development education in Europe, North America, Australia and Japan. Chapters include how development education evolved, the influence of theorists such as Paulo Freire, the practices of aid and development agencies, and the impact of governments seeking evidence of public understanding of and engagement with development. The Theory and Practice of Development Education provides essential reading for anyone engaged in re-thinking and reflecting upon the educational needs of a globalised society, and seeking approaches towards learning that place social justice at the heart of that practice. It will be of particular interest to academics and postgraduate students in the fields of development education, international education and globalisation.
