Deep Learning Jan 13 2021 An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives.

"Written by three experts in the field, Deep Learning is the only comprehensive book on the subject." —Elon Musk, cochair of OpenAI; cofounder and CEO of Tesla and SpaceX Deep learning is a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning. The text offers mathematical and conceptual background, covering relevant concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and practical methodology; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and

videogames. Finally, the book offers research perspectives, covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. A website offers supplementary material for both readers and instructors.

The Case against Education Nov 30 2019 Why we need to stop wasting public funds on education Despite being immensely popular—and immensely lucrative—education is grossly overrated. Now with a new afterword by Bryan Caplan, this explosive book argues that the primary function of education is not to enhance students' skills but to signal the qualities of a good employee. Learn why students hunt for easy As only to forget most of what they learn after the final exam, why decades of growing access to education have not resulted in better jobs for average workers, how employers reward workers for costly schooling they rarely ever use, and why cutting education spending is the best remedy. Romantic notions about education being "good for the soul" must yield to careful research and common sense—The Case against Education points the way.

1956, The World in Revolt Feb 11 2021 Popular uprisings in Poland and Hungary shake Moscow's hold on its eastern European empire. Across the American South, and in the Union of South Africa, black people risk their livelihoods, and their lives, in the struggle to dismantle institutionalised white supremacy and secure first-class citizenship. France and Britain, already battling anti-colonial insurgencies in Algeria and Cyprus, now face the humiliation of Suez. Meanwhile, in Cuba, Fidel Castro and his band of rebels take to the Sierra Maestra to plot the overthrow of a dictator... 1956 was one of the most remarkable years of the twentieth century. All across the globe, ordinary people spoke out, filled the streets and city squares, and took up arms in an attempt to win their freedom. In response to these unprecedented challenges to their authority, those in power fought back, in a desperate bid to shore up their position. It was an epic contest, and one which made 1956 - like 1789 and 1848 - a year that changed our world.

Shiverton Hall Nov 10 2020 They slowed as they reached the gate; two stone columns, each with its own crumbling angel perched on top. The angels held up a rusty, wrought-iron arch that read, in curling, serpentine letters: SHIVERTON HALL. Arthur Bannister has been unexpectedly accepted into Shiverton Hall, which, as it turns out, is an incredibly spooky school, full of surprises. And it is just as well that Shiverton Hall has made its offer, because Arthur had a horrible time at his previous school, and was desperate to leave. Timely indeed . . . But Arthur has no time to worry about the strange coincidence. He is too busy trying to make head or tail of Shiverton Hall, dogged as it is by tales of curses and bad fortune. At least there are a few friendly faces: George, who shows him around; also Penny and Jake. But not all the faces are friendly. There are the bullying Forge triplets for starters. And then there is the acid tongue of the headmistress, Professor Long-Pitt, who seems to go out of her way to make Arthur's life a misery. Luckily Arthur has his new friends to cheer him up. Although there are some friends that you don't want to have at all, as Arthur is soon to find out.

City, Street and Citizen Aug 08 2020 How can we learn from a multicultural society if we don't know how to recognise it? The contemporary city is more than ever a space for the intense convergence of diverse individuals who shift in and out of its urban terrains. The city street is perhaps the most prosaic of the city's public parts, allowing us a view of the very ordinary practices of life and livelihoods. By attending to the expressions of conviviality and contestation, 'City, Street and Citizen' offers an alternative notion of 'multiculturalism' away from the ideological frame of nation, and away from the moral imperative of community. This book offers to the reader an account of the lived realities of allegiance, participation and belonging from the base of a multi-ethnic street in south London. 'City, Street and Citizen' focuses on the question of whether local life is significant for how individuals develop skills to live with urban change and cultural and ethnic diversity. To animate this question, Hall has turned to a city street and its dimensions of regularity and propinquity to explore interactions in the small shop spaces along the Walworth Road. The city street constitutes exchange, and as such it provides us with a useful space to consider the broader social and political significance of contact in the day-to-day life of multicultural cities. Grounded in an ethnographic approach, this book will be of interest to academics and students in the fields of sociology, global urbanisation, migration and ethnicity as well as being relevant to politicians, policy makers, urban designers and architects involved in cultural diversity, public space and street based economies.

Pennine Way record attempt in July 2020. In July 1989, Mike Hartley set the Fastest Known Time (FKT) record for the Pennine Way, running Britain's oldest National Trail in a little over two days and seventeen hours. He didn't stop to sleep, but did break for fifteen minutes for fish and chips. Hartley's record stood for thirty-one years, until two attempts were made on it in two weeks in the summer of 2020. First, American John Kelly broke Hartley's record by less than an hour, then Hall knocked another two hours off Kelly's time. Hall used his record attempt to highlight environmental issues: his attempt was carbon negative, he used no plastics, and he and his pacing runners collected litter as they went, while also raising money for Greenpeace. A vegan, Hall used no animal products on his attempt. Scrawled on his arm in permanent marker was 'FFF', signifying the three things that matter most to him: Family, Friends, Future. Packed with dry wit and humour, *In It for the Long Run* tells of Hall's four-year preparation for his attempt, and of the run itself. He also gives us an autobiographical insight into the deranged world of midlife crisis ultramarathon running and record attempts.
