*Coaching Models: A Cultural Perspective* Jun 22 2019 "In addition to providing an extensive analysis of strategies for changing performance and the factors that can impact coaching effectiveness, this book offers what may be a unique value: instead of promoting one approach as the best, Dr. Lennard guides readers through a highly customized process of developing our own individualized coaching model. As a result of the book's thought-provoking activities, I strengthened my own sense of personal authenticity and saw new ways to coach and collaborate fully with employees who may have very different perspectives." — Tita Theodora Beal, Learning & Development, Pfizer, Inc. "This is a wise book. The essential take-away is simple and profound. Develop, refine, and apply your own (as in ownership) personalized coaching model. Much is provided; nothing is imposed. Readers are invited to reflect on unique and defining experiences, strengths, values, perspectives and style and to begin creating their own 'work in progress.' Coaching Models will be a compelling read for experienced coaches and new coach practitioners alike." — Bethene LeMahieu, Ed.D.; Professional Coach and Conversation Conservationist *Coaching Models: A Cultural Perspective* encourages and assists students and practitioners of business coaching to develop and apply their own coaching models. The entire field of coaching will benefit from having coaches who use their models to continually improve their practice. The first part of this book presents the model development process by looking at the relationship among culture, beliefs, and behavior in the coaching context. It explains the importance of identifying cultural factors that influence the way coaches approach coaching interactions, and their coaching models. The second section provides coaches with information and strategies for developing personalized coaching models, applying them to specific contexts, and reflecting on their interactions to refine their core coaching practices. The third part describes the evolution of the author's own coaching model—the Performance Coaching Model—and illustrates how one coach incorporates unique perspectives and sets of skills, knowledge, and experience in her coaching practice.

**Model-Driven Software Development: Integrating Quality Assurance** Mar 31 2020 Covers important concepts, issues, trends, methodologies, and technologies in quality assurance for model-driven software development.

*Explanatory Model Analysis* Dec 29 2019 *Explanatory Model Analysis* Explore, Explain and Examine Predictive Models is a set of methods and tools designed to build better predictive models and to monitor their behaviour in a changing environment. Today, the true bottleneck in predictive modelling is neither the lack of data, nor the lack of computational power, nor inadequate algorithms, nor the lack of flexible models. It is the lack of tools for model exploration (extraction of relationships learned by the model), model explanation (understanding the key factors influencing model decisions) and model examination (identification of model weaknesses and evaluation of model's performance). This book presents a collection of model agnostic methods that may be used for any black-box model together with real-world applications to classification and regression problems.

**The Uniqueness of China's Development Model** Jun 26 2022 The book discusses the development model of China which has now overtaken Japan as the world's second largest economy. This remarkable economic achievement has not followed the Western world's favorite developmental tools OCo of freedom, democracy and a market driven economy, but rather China's unique model OCo of one-party authoritarian rule with a mixed economy. The Middle Kingdom's way of development has largely questioned the West's core values OCo freedom and democracy. The book argues that the model is based on the country's 3,000-year-old civilization, forged by the efforts, innovations, trial and error process of several recent generations, and guided by the Chinese Communist Party in the past 60 years.

**China** Aug 17 2021 The Chinese economy is undergoing profound change in policy and structure. The change is necessary to increase the value of growth to the Chinese community, and to sustain growth into the future. The changes are so comprehensive and profound that they represent a new model of Chinese economic growth. This book describes the replacement of an old uninhibited investment

expansion model of growth, by transition to modern economic growth and provides insights into recent changes and where they are likely to lead. These include requirements for building the new institutions including its public finances for future growth, adjustments in its savings, industry and agriculture, changes in its demographic structure, business environment, and pattern of rural-urban migration, prospects for 'green growth', its energy policy trilemma and the climate change mitigation strategy, and changes for China's interaction with the international economy through its overseas investment and trade in high tech products. China's adoption of a new model of economic growth is of immense importance to people in China and everywhere. This book is an early attempt to take a close look at many of the features of the new model.

**A Model for Islamic Development** May 14 2021 This book aims to explore and analyse Islamic Moral Economy (IME) as an alternative economic and social system to capitalism and socialism. It proposes a new model of Islamic development, integrating global development within an Islamic framework of spiritual development. It is argued that the failure of Muslim countries to provide basic necessities and an environment free of oppression and injustice can be overcome with this authentic Islamic development framework. In addition, this book can be an important study to identify the theological, political, social and economic boundaries for changing the society to produce IME oriented developmentalism.

**A Dynamic Cascade Model of the Development of Substance - Use Onset** Jul 04 2020 The book offers an extensive exploration of the childhood factors that can lead to substance abuse. Puts forward a dynamic cascade model of the development of adolescent substance-use onset Model is based on broad sampling of children from prekindergarten through to Grade 12 The results offer practical suggestions for interventions, public policies, and economics of substance-use and future inquiry

**The Integrative Developmental Model of Supervision** Jan 10 2021 "The goal of the integrative developmental model (IDM) is to promote personal and professional therapist growth through three developmental levels by closely attending to the three overriding structures of Self- and Other-Awareness, Motivation, and Autonomy across eight domains of clinical practice including intervention skills competence, assessment techniques, individual differences, and professional ethics. The IDM stresses the importance of assessing the therapist's developmental level while at the same time providing the optimal supervisory environment for progression through those levels. In this video, Dr. McNeill and his supervisee engage in a supervisory session, and host Dr. Arpana G. Inman interviews them about their work together, exploring the constructs of this model as they discuss highlights from the demonstration session."--

**Models Of Cognitive Development** Jan 22 2022 In spite of its obvious importance and popularity, the field of cognitive development remains highly fragmented due to the vast diversity of models of what knowledge and reasoning are, and how they develop. This new Classic Edition of Models of Cognitive Development aims to overcome this barrier through its careful introduction, illustrated examples, and approach to helping students think more critically about the subject. In this significant work, Richardson provides students, researchers, and comparative theoreticians with a cohesive understanding of the area by organizing diverse schools, frameworks, and approaches according to a much smaller set of underlying assumptions or preconceptions, which themselves can be historically interrelated. By understanding these, it's possible to find pathways around the area more confidently as a whole, to see the "wood" as well as the theoretical trees, and be able to react to individual models more critically and constructively. The Classic Edition of this core text will be essential reading for undergraduate and graduate students of cognitive development.

**Model-Driven Development of Advanced User Interfaces** Oct 07 2020 Model-Driven Development (MDD) has become an important paradigm in software development. It uses models as primary artifacts in the development process. This book provides an outstanding overview as well as deep insights into the area of model-driven development of user interfaces, which is an emerging topic in the intersection of Human-Computer-Interaction and Software-Engineering. The idea of this book is based on the very successful workshop series of "Model-Driven Development of Advanced User Interfaces (MDDAUI)". It has been written by the leading researchers and practitioners in the field of model-driven development of user interfaces and offer a variety of solutions and examples for • Architectures and environments for the generation of user interfaces • User interface development for specific domains and purposes • Model-driven development in the context of ambient intelligence • Concepts supporting model-driven development of user interfaces

**Model-Driven Engineering and Software Development** Nov 19 2021 This book constitutes thoroughly revised and selected papers from the 8th International Conference on Model-Driven Engineering and Software Development, MODELSWARD 2020, held in Valletta, Malta, in February 2020. The 15 revised and extended papers presented in this volume were carefully reviewed and selected from 66 submissions. They present recent research results and development activities in using models and model driven engineering techniques for software development. The papers are organized in topical sections on? methodologies, processes and platforms; applications and software development; modeling languages, tools and architectures.

**Visual Informatics: Bridging Research and Practice** Jun 02 2020 Visual informatics is a field of interest not just among the information technology and computer science community, but also other related fields such as engineering, me- cal and health informatics and education starting in the early 1990s. Recently, the field is gaining more attention from researchers and industry. It has become a mul- disciplinary and trans-disciplinary field related to research areas such as computer vision, visualization, information visualization, real-time image processing, medical image processing, image information retrieval, virtual reality, augmented reality, - pressive visual mathematics, 3D graphics, multimedia-fusion, visual data mining, visual ontology, as well as services and visual culture. Various efforts has been - vested in different research, but operationally, many of these systems are not pro- nent in the mass market and thus knowledge and research on these phenomena within the mentioned areas need to be shared and disseminated. It is for this reason that the Visual Informatics Research Group from Universiti - bangsaan Malaysia (UKM) decided to spearhead this initiative to bring together experts in this very diversified but important research area so that more concerted efforts can be undertaken not just within the visual informatics community in Malaysia but from other parts of the world, namely, Asia, Europe, Oceania, and USA. This first International Visual Informatics Conference (IVIC 2009) was conducted collaboratively, by the visual informatics research community from the various public and private institutions of higher learning in Malaysia, and hosted by UKM.

**Model-Driven Software Development** May 26 2022 Abstraction is the most basic principle of software engineering. Abstractions are provided by models. Modeling and model transformation constitute the core of model-driven development. Models can be refined and finally be transformed into a technical implementation, i.e., a software system. The aim of this book is to give an overview of the state

of the art in model-driven software development. Achievements are considered from a conceptual point of view in the first part, while the second part describes technical advances and infrastructures. Finally, the third part summarizes experiences gained in actual projects employing model-driven development. Beydeda, Book and Gruhn put together the results from leading researchers in this area, both from industry and academia. The result is a collection of papers which gives both researchers and graduate students a comprehensive overview of current research issues and industrial forefront practice, as promoted by OMG's MDA initiative.

A Descriptive Study of a Synthesized Operational Instructional Development Model, Reporting Its Effectiveness, Efficiency, and the Cognitive and Affective Influence of the Developmental Process of a Client May 02 2020

**Planning Education for Development: Models and methods for systematic planning of education** Oct 26 2019

**IICA: Food Security in the Americas A New Development Model** Apr 12 2021

**IDM Supervision** Sep 25 2019 The third edition of this book is an updated and expanded presentation of the widely used Integrative Developmental Model of Supervision. In contrast to other volumes on clinical supervision, Stoltenberg and McNeill present a comprehensive, time-tested, and empirically investigated model of supervision, rather than a broad summary of other existing or historical approaches. In addition to presenting a model of therapist development that spans beginning through advanced training, the book integrates theory and research from numerous perspectives, including learning, cognition, and emotion, as well as an up-to-date treatment of research directly addressing the supervision process. The model also examines the role of clinical supervision from an evidence-based practice perspective and addresses issues of common factors in therapy. The impact of cultural issues in supervision and training, as well as recent work in a competencies approach to supervision and trainee development, are also examined.

**The Chinese Model of Modern Development** Aug 24 2019 This study examines the Chinese model of modern development, reflecting on the historical experience of China's reform and highlighting theoretical issues that are crucial for understanding the reform in its historical and global contexts. Bringing together articles from scholars, including designers of and active participants in the reform, opinion setters in the current debates on the nature and future of the reform, and Western scholars whose ideas have had great impact on Chinese intellectuals, the book considers the goals of China's reforms and the ways in which these goals may be achieved, the most urgent issues now facing China, and globalization and its impact on China.

**Model-Driven Engineering and Software Development** Sep 05 2020 This book constitutes thoroughly revised and selected papers from the 4th International Conference on Model-Driven Engineering and Software Development, MODELSWARD 2016, held in Rome, Italy, in February 2016. The 17 thoroughly revised and extended papers presented in this volume were carefully reviewed and selected from 118 submissions. They are organized in topical sections named: modeling languages, tools and architectures; methodologies, processes and platforms; applications and software development.

**Model-Driven Engineering and Software Development** Feb 20 2022 This book constitutes thoroughly revised and selected papers from the 7th International Conference on Model-Driven Engineering and Software Development, MODELSWARD 2019, held in Prague, Czech Republic, in February 2019. The 16 thoroughly revised and extended papers presented in this volume were carefully reviewed and selected from 76 submissions. They address some of the most relevant challenges being faced by researchers and practitioners in the field of model-driven engineering and software development and cover topics like language design and tooling; programming support tools; code and text generation from models, behavior modeling and analysis; model transformations and multi-view modeling; as well as applications of MDD and its related techniques to cyber-physical systems, cyber security, IoT, autonomous vehicles and healthcare.

**Human Development Models in Action** Dec 21 2021

**Long-Term Athlete Development** Jun 14 2021 Long-Term Athlete Development describes how to systematically develop sporting excellence and increase active participation in local, regional, and national sport organizations. This resource describes the long-term athlete development (LTAD) model, an approach to athlete-centered sport that combines skill instruction with long-term planning and an understanding of human development. By learning about LTAD, sport administrators and coaches will gain the knowledge and tools to enhance participation and improve performance and growth of athletes. This text offers the first in-depth and practical explanation of the LTAD model. Long-Term Athlete Development integrates current research on talent development and assessment into practice to help sport leaders plan athletic development across the life span or design detailed programs for a particular group, including those with physical and cognitive disabilities. Authors Balyi, Way, and Higgs—pioneers and veteran LTAD facilitators—critique current talent development models, discuss the limitations of the LTAD model, and demonstrate the benefits of LTAD as a new approach. By integrating knowledge of these models, readers are able to analyze their own programs and take steps to improve sport and coaching philosophies and reach adherence and performance goals. Explanations and visuals of concepts help readers understand the state of knowledge in talent identification and long-term athlete development. Chapter-opening vignettes offer examples of how the LTAD model can be used to alleviate common issues. Listings at the end of each chapter offer sources for further study, and reflection questions guide readers in applying the content. The text offers a logical presentation of current research:

- Key factors that guide and shape the LTAD model, such as physical literacy, the differences between early- and late-specialization sports, and variations in trainability across the life span
- Information on the time needed to develop excellence in sport and how periodization of training is related to the developmental stage of the athlete
- The seven stages of LTAD, from development of fundamental movement skills to training for elite competition and the transition to lifelong physical activity
- Considerations in the development of optimal programs for participants passing through each of the seven stages

Long-Term Athlete Development is an essential guide to improving the quality of sport, developing high-performance athletes, and creating healthy, active citizens. It offers parents, coaches, and sport administrators a deeper understanding of the LTAD model, helping them create an enjoyable, developmentally appropriate environment for both competitive athletes and enthusiastic participants.

**Development Models, Globalization and Economies** Oct 31 2022 This text considers different economic models available in the global market. The US or Anglo-Saxon model is often portrayed as the best but now Asia is again on a roll. The book analyzes how these models have influenced both regional and global development, and engages in discussions upon alternatives and the search for the 'grail'.

**In Search of China's Development Model** Sep 29 2022 This book examines the development model that has driven China's economic success and looks at how it differs from the Washington Consensus. China's Development Model (CDM) is examined with a view to

answering a central question: given China's peculiar matrix of a socialist party-state juxtaposed with economic internationalization and marketization, what are the underlying dynamics and the distinctive features of the economic and political/legal/social dimensions of the CDM, and how do we properly characterize their interrelations? The chapters further analyse to what extent and under what circumstances is China's development model sustainable, and to what degree is it readily applicable to other developing countries. Based on their findings in this volume, the authors conclude that the defining feature of the CDM's economic dimension is "Janus-faced state-led growth," and the political/legal/social dimension of the CDM is best characterized as "adaptive post-totalitarianism." The contributors illustrate that the CDM's parameters are shown to be much less sustainable than the CDM's outcome in developmental performance and the extent to which the CDM can be applied to other late-developers is subject to more qualifications than its sustainability.

*Key Management Development Models* Nov 27 2019 'A very practical, engaging guide to the essential tools which managers at all levels need to be effective themselves and to develop others. Highly recommended.' Stuart Chambers, former CEO of Pilkington plc  
*Key Management Development Models* gives you, at a glance, instant access to a full range of the best models available for developing your management skills and helping others to work and perform at their peak. For anyone seeking to develop their management skills it can be hard to know where to begin. *Key Management Development Models* explains the tools in detail – what they are and when and how to use them, with key practical tips. It's like having your very own management development coach on hand explaining all the tools that you will ever need to know. **EXPERT GUIDANCE FOR YOUR MANAGEMENT CAREER**

**An Introduction to Urban Development Models and Guidelines for Their Use in Urban Transportation Planning** Mar 24 2022  
*The Nature and Development of Decision-making* Jan 28 2020 Although everyone has goals, only some people successfully attain their respective goals on a regular basis. With this in mind, the author attempts to answer the question of why some people are more successful than others. He begins with the assumption that the key to personal success is effective decision-making, and then utilizes his own theory--The Self-Regulation Model--to explain the origin and nature of individual differences in decision-making competence. The author also summarizes a number of existing models of decision-making and risk-taking. This book has two primary goals: \* to provide a comprehensive review of the developmental literature on the decision-making skills of children, adolescents, and adults, and \* to propose a theoretical model of decision-making skill that offers a better description of this skill than prior accounts. Taken together, the literature review and theoretical model help the reader acquire a clear sense of the development of decision-making skills as well as reasons for the developmental differences that seem to emerge.

**The East Asian Development Model** Feb 29 2020 The Asian Economic Crisis and the following economic meltdown have raised new questions about the role of industrial policy in Asian Economic growth and the best mix of policies to insure the survival of economic growth. Bringing together the work of development economics experts, this book looks at the role of industrial policy in East Asian development and the challenge of the economic meltdown. The book aims to guide governments and firms to manage strategically through and beyond the present crisis.

**East Asian Development Model** Jul 16 2021 Given the impressive growth in East Asia after World War II, initially led by Japan, the region's development models have been scrutinized since the 1980s. The shared Confucian cultural heritage, strong government guidance, and export led economies were often cited as contributors to the impressive growth. However, major changes have taken place in Asia on and around the turn of the century: Japan experienced two decades of economic slow-down, while World Bank figures reveal that China is poised to become the largest economy in the world in 2014, overtaking the United States. Bearing this in mind, is it even possible to formulate an East Asian development model in the context of a shifting twenty-first century? And if so, what is it? This book addresses this issue by looking at the economic, political and cultural perspectives of China, Japan and South Korea, focusing on dynamism and potential consensus regarding an East Asian development model. The chapters offer a historical background to the East Asian development model, as well as in-depth case studies of each of the countries concerned to show that whilst the East Asian development model does have distinct characteristics as compared with other areas, and other countries may draw some insights from the East Asian experience, it is not a panacea that fits all circumstances and fits all times. This book will be welcomed by students and scholars of Asian economics, Asian politics, international political economy and development studies.

**Model-Driven Software Development** Nov 07 2020 Model-Driven Software Development (MDS) is currently a highly regarded development paradigm among developers and researchers. With the advent of OMG's MDA and Microsoft's Software Factories, the MDS approach has moved to the centre of the programmer's attention, becoming the focus of conferences such as OOPSLA, JAOO and OOP. MDS is about using domain-specific languages to create models that express application structure or behaviour in an efficient and domain-specific way. These models are subsequently transformed into executable code by a sequence of model transformations. This practical guide for software architects and developers is peppered with practical examples and extensive case studies. International experts deliver: \* A comprehensive overview of MDS and how it relates to industry standards such as MDA and Software Factories. \* Technical details on meta modeling, DSL construction, model-to-model and model-to-code transformations, and software architecture. \* Invaluable insight into the software development process, plus engineering issues such as versioning, testing and product line engineering. \* Essential management knowledge covering economic and organizational topics, from a global perspective. Get started and benefit from some practical support along the way!

**Model-driven development methodology for hybrid embedded systems based on UML with emphasis on safety-related requirements** Feb 08 2021 Die Entwicklung eingebetteter Systeme wird aufgrund der immer anspruchsvolleren Anwendungen sowie der Verwendung von leistungsfähigeren Hardware-Architekturen (z.B. Multicore-, Hybrid-Systeme) immer komplexer. Modellgetriebene Methoden reduzieren die Komplexität des Systems mittels angemessenen Abstraktionsniveaus. Diese Arbeit stellt die modellgetriebene Entwicklungsmethodik DMOSES (Deterministische Modelle für die signalverarbeitenden eingebetteten Systeme) vor. Diese Methodik strebt die Verbesserung der Entwicklung hybrider eingebetteten Systeme (z.B. CPUs und FPGAs) hinsichtlich der Komplexität mittels anpassbarer Abstraktionsebenen, automatischer Codegenerierung und Systemverifikation an. Systeme werden mittels UML-Verhaltensmodelle spezifiziert, deren erweiterte Semantik relevante funktionale und nicht-funktionale Aspekte hybrider eingebetteten Systemen beschreibt. Eine anpassbare Abstraktionsebene wird durch die Integration von automatischer Code-Generierung und optimierbarem Code erreicht. Außerdem werden Sicherheitsanforderungen durch die Integration von Analysetechniken (Formale Verifikation, Ausführungszeit-Analyse und Software-Verträgen) in die Entwicklungsmethodik verifiziert.

Model Development and Optimization Jul 28 2022 At present, concerning intensive development of computer hardware and software, computer-based methods for modeling of difficult problems have become the main technique for theoretical and applied investigations. Many unsolved tasks for evolutionary systems (ES) are an important class of such problems. ES relate to economic systems on the whole and separate branches and businesses, scientific and art centers, ecological systems, populations, separate species of animals and plants, human organisms, different subsystems of organisms, cells of animals and plants, and soon. Available methods for modeling of complex systems have received considerable attention and led to significant results. No large-scale programs are done without methods of modeling today. Power programs, health programs, cosmos investigations, economy designs, etc. are a few examples of such programs. Nevertheless, in connection with the permanent complication of contemporary problems, existing means are in need of subsequent renovation and perfection. In the monograph, along with analysis of contemporary means, new classes of mathematical models (MM) which can be used for modeling in the most difficult cases are proposed and justified. The main peculiarities of these MM offer possibilities for the description of ES; creation and restoration processes; dynamics of elimination or reservation of obsolete technology in ES; dynamics of resources distribution for fulfillment of internal and external functions of ES; and so on. The complexity of the problems allows us to refer to the theory and applications of these MM as the mathematical theory of development. For simplicity, the title "Model Development and Optimization" was adopted.

**Constructing a Future Development Model for China's Basic Education** Apr 24 2022 Focusing on the future development of basic education in China, and on overcoming related issues, this book identifies key breakthroughs, priorities and important fields of basic education reform. In addition, it introduces the "Three Power Model" – decision-making, principals' leadership, and learning power – to help address the challenges of future development. Unlike much of the research on basic education reform, the book draws on a forward-thinking, realistic and comprehensive project: bringing together 15 universities and research institutes, 16 provincial administration departments, and 100 selected primary and secondary schools, it has also been strongly endorsed by the nation's leaders. After five years of practice and innovation, it has made significant breakthroughs in many provinces. Sharing unique insights into the project and its outcomes, the book offers an invaluable asset for education researchers, primary and secondary school teachers, and anyone interested in the evolution of basic education in China.

**Model Driven Engineering and Ontology Development** Mar 12 2021 Defining a formal domain ontology is considered a useful, not to say necessary step in almost every software project. This is because software deals with ideas rather than with self-evident physical artefacts. However, this development step is hardly ever done, as ontologies rely on well-defined and semantically powerful AI concepts such as description logics or rule-based systems, and most software engineers are unfamiliar with these. This book fills this gap by covering the subject of MDA application for ontology development on the Semantic Web. The writing is technical yet clear, and is illustrated with examples. The book is supported by a website.

**Adult Development: Models and methods in the study of adolescent and adult thought** Jul 24 2019 This volume brings together the works of distinguished authors in the field of postformal-operational cognitive, social, and perceptual development to examine the models and methodology used to investigate postformal thought. The contributors examine both Piagetian and nonstructural models of adult cognitive development, explore the measurement and comparison of cognitive development in adults, and assess the research and theory of adult reasoning in the moral domain. A concluding chapter investigates critical evaluations of postformal research.

*A Test Application of the Access and Land Development Model in Suffolk County, New York* Aug 29 2022

**Model-Driven Engineering and Software Development** Aug 05 2020 This book constitutes thoroughly revised and selected papers from the 5th International Conference on Model-Driven Engineering and Software Development, MODELSWARD 2017, held in Porto, Portugal, in February 2017. The 20 thoroughly revised and extended papers presented in this volume were carefully reviewed and selected from 91 submissions. They contribute to the development of highly relevant research trends in model-driven engineering and software development such as methodologies for MDD development and exploitation, model-based testing, model simulation, domain-specific modeling, code generation from models, new MDD tools, multi-model management, model evolution, and industrial applications of model-based methods and technologies.

**Model-Driven Engineering and Software Development** Dec 09 2020 This book constitutes thoroughly revised and selected papers from the 6th International Conference on Model-Driven Engineering and Software Development, MODELSWARD 2018, held in Funchal, Madeira, Portugal, in January 2018. The 22 thoroughly revised and extended papers presented in this volume were carefully reviewed and selected from 101 submissions. They contribute to the development of highly relevant research trends in model-driven engineering and software development such as innovative methods for MDD-based development and testing of web-based applications and user interfaces, support for development of Domain-Specific Languages (DSLs), MDD-based application development on multiprocessor platforms, advances in MDD tooling, formal semantics and behaviour modelling, and MDD-based product-line engineering.

**The Uniqueness of China's Development Model: 1842–2049** Oct 19 2021 The book discusses the development model of China which has now overtaken Japan as the world's second largest economy. This remarkable economic achievement has not followed the Western world's favorite developmental tools — of freedom, democracy and a market driven economy, but rather China's unique model — of one-party authoritarian rule with a mixed economy. The Middle Kingdom's way of development has largely questioned the West's core values — freedom and democracy. The book argues that the model is based on the country's 3,000-year-old civilization, forged by the efforts, innovations, trial and error process of several recent generations, and guided by the Chinese Communist Party in the past 60 years. Sample Chapter(s) Chapter 1: Understanding the China Model (119 KB) Contents: Understanding the China Model Perspectives on the China Model A Comprehensive Discussion on the China Model (1) A Comprehensive Discussion on the China Model (2) The Social Structure of the China Model The Economic Structure of the China Model Political Structure of the China Model The Future of the China Model and Its Impact Readership: Undergraduates, graduates, researchers and general public who are interested in China's development model such as China's social structure, economic structure and political structure etc. Keywords: China Model; China's Development Path; China's Future; China's Rise; China's "US Relations; China And The West; China's Challenges; International Relations Key Features: The book looks at some key issues of China's development model whose outcome will come to determine the world's future in the next millennium The author has a unique and long-term perspective of China's development Since participating in pro-Communist activities in Hong Kong in high school years in

the 1950s, the author has witnessed various stages of China's development, often with personal involvement in business, social and in political affairs in the Mainland, Hong Kong and Taiwan. Thus he has gained intimate knowledge about various aspects of China in the form of numerous anecdotes and insights presented in this book

**Disability, Health and Human Development** Sep 17 2021 This open access book introduces the human development model to define disability and map its links with health and wellbeing, based on Sen's capability approach. The author uses panel survey data with internationally comparable questions on disability for Ethiopia, Malawi, Tanzania and Uganda. It presents evidence on the prevalence of disability and its strong and consistent association with multidimensional poverty, mortality, economic insecurity and deprivations in education, morbidity and employment. It shows that disability needs to be considered from multiple angles including aging, gender, health and poverty. Ultimately, this study makes a call for inclusion and prevention interventions as solutions to the deprivations associated with impairments and health conditions.
