The Seventh Treasure Sep 01 2022 A young woman is killed in an apparent traffic accident in the mountains outside of the city of Granada, Spain. Her brother, who heads up the Attack on Principle training unit of the U.S. Secret Service, travels to Spain to bring her body back to America. There, and in the company of a female lieutenant in the National Police Force, it is discovered that there may have been foul play associated with his sister Gina's death. Soon, the consequence of this incident generates a cascade of mysterious murders that confounds local authorities and shuts down all leads to why Gina Cerone was killed. Eugene Cerone, after a thirty year career in the Secret Service, retires so that he can participate in the investigation of Gina's apparent murder. Working with Lieutenant Mercedes Garcia Rico, an attractive, strong willed and competent investigator, the two uncover an unfathomable conspiracy that dates back to the time the Moors surrendered their kingdom in Spain to the Catholic monarchs, Ferdinand and Isabela in 1492. Driven first by the mission to bring the killer of his sister to justice, Cerone is forced to confront a true evil empire, one that could threaten the stability of an allied nation, Europe as well as the security of the United States. Without official sanction from either government, Cerone builds an unlikely support network and investigative team that includes resources from the Secret Service, a Hollywood film studio, the CIA and the Spanish Police Scientific Unit. Innovative behavioral analysis techniques, financial forensics and intelligence systems are used to link historical events and Arabian fables to crimes and conspiracies of the 21st century. Cerone and Lieutenant Garcia must decipher fact from fable, evidence from whispered rumors and leads from legends, to solve the mystery and stop a silent revolution and convince both Spanish and American authorities, that the conspiracy is real and not fantasy.

Light Scattering Reviews 5 Jan 13 2021 Light scattering by densely packed inhomogeneous media is a particularly challenging optics problem. In most cases, only approximate methods are used for the calculations. However, in the case where only a small number of macroscopic scattering particles are in contact (clusters or aggregates) it is possible to obtain exact results solving Maxwell's equations. Simulations are possible, however, only for a relatively small number of particles, especially if their sizes are larger than the wavelength of incident light. The first review chapter in Part I of this volume, prepared by Yasuhiko Okada, presents modern numerical techniques used for the simulation of optical characteristics of densely packed groups of spherical particles. In this case, Mie theory cannot provide accurate results because particles are located in the near field of each other and strongly interact. As a matter of fact, Maxwell's equations must be solved not for each particle separately but for the ensemble as a whole in this case. The author describes techniques for the generation of shapes of aggregates. The orientation averaging is performed by a numerical integration with respect to Euler angles. The numerical aspects of various techniques such as the T-matrix method, discrete dipole approximation, the finite difference time domain method, effective medium theory, and generalized multi-particle Mie solution are presented. Recent advances in numerical techniques such as the grouping and adding method and also numerical orientation averaging using a Monte Carlo method are discussed in great depth.

Nimble Tongues Apr 15 2021 Nimble Tongues is a collection of essays that continues Steven G. Kellman's work in the fertile field of translanguaging, focusing on the phenomenon of switching languages. A series of investigations and reflections rather than a single thesis, the collection is perhaps more akin in its aims—if not accomplishment—to George Steiner's Extraterritorial: Papers on Literature and the Language Revolution or Umberto Eco's Travels in Hyperreality. Topics covered include the significance of translanguaging; translation and its challenges; immigrant memoirs; the autobiographies that Ariel Dorfman wrote in English and Spanish, respectively; the only feature film ever made in Esperanto; Francesca Marciano, an Italian who writes in English; Jhumpa Lahiri, who has abandoned English for Italian; Ilan Stavans, a prominent translanguaging author and scholar; Hugo Hamilton, a writer who grew up torn among Irish, German, and English; Antonio Ruiz-Camacho, a Mexican who writes in English; and the Universal Declaration of Human Rights as a multilingual text.

Home-Grown Terror Mar 27 2022 Peter Maynard is an English mobile telecoms engineer, and happily married to his Filipina wife of some three years. Peter takes on a 3 month contract in Riyadh, Saudi Arabia. It is at this time whilst the engineer is carrying out his work on a rooftop site, one Friday morning that he makes a sinister discovery. Whilst looking in one of the three rooftop outbuildings for spare parts, the engineer discovers something very sinister, a terrorist sleeper cell. Apart from weaponry, concealed with a blanket, and other suspicious objects, he discovers a manual with disturbing data. There are names of prominent MP's (POLITICIANS?), addresses, dates, newspaper cuttings, and what appears to be, planned attacks for some time into the near future, in the Kingdom of Saudi Arabia, the UK and USA. Peter hurriedly takes the manual back to his hotel, where he photocopies some of the pages, as evidence for the British security authorities. On his return to the rooftop site, he finds it impossible to replace the book, as the four occupants of the outbuilding have returned. He therefore, has to conceal the book, and

he returns to the radio room. The terrorists soon discover their precious manual missing, and over the course of time, the engineer, under suspicion, is followed, spied upon, hounded, and gradually, matters go from bad to worse, with unexpected twists and turns along the way...

Throughout the book there is a thread of tragedy, sorrow, emotion, humour, and in some cases a spiritual element. The reader is kept in suspense as to what will happen next, with an unexpected outcome!

Popular Science Jul 27 2019 Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.
