**Structural Analysis** Mar 27 2022 When teaching structural analysis, some contend that students need broad exposure to many of the classical techniques of analysis, while others argue that learners benefit more from the computer-based analysis experiences that involve parametric studies. *Structural Analysis, Understanding Behavior* strikes a balance between these viewpoints. Students may no longer need to know every classical technique but they still need a fundamental knowledge of the concepts which come from studying a subset of classical techniques. This foundation is then strengthened by the use of structural analysis software in activities designed to promote self-discovery of structural concepts and behaviors. This text was developed with this goal in mind.

*Ethics Within Engineering* Nov 10 2020 Engineering begins with a design problem: how to make occupants of vehicles safer, settle on an inter-face for an x-ray machine or create more legible road signs. In choosing any particular solution, engineers must make value choices. By focusing on the solving of these problems, *Ethics Within Engineering* shows how ethics is at the intellectual core of engineering. Built around a number of engaging case studies, Wade Robison presents real examples of engineering problems that everyone, engineer or not, will recognize, ranging from such simple artifacts as toasters and the layout of burners and knobs on a stove top to the software responsible for the Columbia airliner crash. The most dramatic examples center on error-provocative designs: designs that provoke mistakes for even the most intelligent, well-informed, and highly motivated. These examples all raise ethical issues, posing questions for the reader, forcing the give-and-take of discussion in classrooms and the consideration of alternative solutions that solve the original design problem without the unfortunate features of the original solution. This original, focused approach

provides an ideal entry point for anyone looking to better understand professional ethical responsibilities within engineering.
