THE UNRAVELLING Dec 25 2021 Bill Wilson studied in a number of fields including civil engineering, theology, philosophy, organisation theory, behavioural science and education. He has practiced professionally as a civil engineer; an ordained clergyman; a lecturer in adult higher education; and finally as a Principal of a Further and Higher Education College. Bill believes that all human beings behave and find fulfilment consistent with their inner 'world-view', that is, what we believe about the meaning and purpose of life and any 'god' who oversees it all. His early 'world-view' was that of classical Protestantism. But as his education developed and he engaged with the wider world he became unhappy with the expressions of faith passed down in the credal formulations of the Church in favour of the bottom-up enquiry of ordinary people. For Bill, meaningful religion must address the issues on the minds of the population today, people who live in a rapidly changing world, rather than those living in the fixed static world of yesterday.

Digital Welfare for the Third Age Jun 30 2022 This book is about the ways digital technology can contribute to the welfare of older people. The Internet, mobile phones and other technologies have changed how we live and work. Such technologies also shape how services for older people are organised in ways that potentially place carers and older people at the centre of service provision. Telecare can make homes 'smart' so that they are more comfortable and less risky for people who can take advantage of devices that help make them independent members of their community. Digital Welfare is part of the broader project in Britain and elsewhere to adopt new information and communications technologies (ICTs) to organise and deliver health and social welfare services. This includes mundane technologies like an alarm to call for help to complex telecare 'smart homes' and electronic patient records. The intended and unintended consequences of such new technologies must be explored if we are to benefit from these innovations. Based on recent research this book seeks to highlight and examine the new opportunities and dilemmas that confront older people and all those concerned with their welfare in the network society. This edited collection provides original contributions from leading academics and researchers in the field to access the evidence for improved professional integration and user-centred health and social care services for older people arising from health informatics. Digital Welfare for the Third Age will be of interest to all those working with older people.

And the downside? Anyone who's ever had to troubleshoot a network glitch doesn't need to ask that question. The simple words, "Why can't I print? Why can't I get to the Internet? Why does my computer say 'Access Denied' today, when it worked fine yesterday?" are enough to send the home network administrator running for cover. And the concept of "network security" can keep the soundest sleeper

This book tackles all the common annoyances associated with running your network--whether it's wired or wireless, or a combination thereof. Zero-carbon Homes Aug 28 2019 Housing is a major contributor to CO2 emissions in Europe and America today and the construction of new homes offers an opportunity to address this issue. Providing homes that achieve "zero carbon", "carbon neutral", "zero-net energy" or "energy-plus" standard is becoming the goal of more innovative house-builders globally, whilst energy providers seek to decarbonise the energy supply to new and existing development. Various new technical systems for achieving these goals are beginning to emerge. For example the passive house whose energy requirement for space heating and cooling is almost zero; the smart grid that has revolutionized the management of energy, whilst enabling the connection of small-scale, renewable energy producers and electric vehicles to the grid; or the European super-grid which will enable zero carbon energy to be generated in the Sahara desert and stored in Norway. This book explores the diverse approaches that are being adopted around the world to deliver zero carbon homes and the different societal systems and geographic circumstances in which they have developed. It postulates a roadmap for delivering zero carbon homes, together with a toolbox approach for policy and practice to suit particular national and local circumstances. A series of

case studies are presented that offer lessons for delivering zero carbon homes. These examples are also used to demonstrate how prototype systems can move into the mainstream. The book highlights some of the instruments and mechanisms that could be used to support this transformation and addresses the wider implications of introducing these innovative systems in terms of industry, lifestyle and urban form.
