**A User's Guide to Algebraic Topology** Jul 25 2022 This book arose from courses taught by the authors, and is designed for both instructional and reference use during and after a first course in algebraic topology. It is a handbook for users who want to calculate, but whose main interests are in applications using the current literature, rather than in developing the theory. Typical areas of applications are differential geometry and theoretical physics. We start gently, with numerous pictures to illustrate the fundamental ideas and constructions in homotopy theory that are needed in later chapters. We show how to calculate homotopy groups, homology groups and cohomology rings of most of the major theories, exact homotopy sequences of fibrations, some important spectral sequences, and all the obstructions that we can compute from these. Our approach is to mix illustrative examples with those proofs that actually develop transferable calculational aids. We give extensive appendices with notes on background material, extensive tables of data, and a thorough index. Audience: Graduate students and professionals in mathematics and physics.

*Reproductively Active Chemicals* Apr 29 2020 Reproductively Active Chemicals A Reference Guide Richard J. Lewis, Sr. Adverse effects on the human reproductive system due to chemical exposure are a growing concern of occupational safety and health professionals. While the effects of certain chemicals can be difficult to detect, and often go unnoticed or are mistakenly attributed to other causes, they can drastically increase risks of infertility, sterility, birth defects, and post-birth complications. Written by one of the foremost authorities in the field today, Reproductively Active Chemicals is the first book to identify, compile, and fully document the effects of more than 3,300 chemical substances known or suspected to cause adverse effects on human reproductive health. This major reference work features: Cross-indexes by synonym and identification number Vital information drawn from authoritative sources on hazardous chemicals, including chemical properties, toxicity, and synonyms Toxic effects indicating reported dominant reproductive effects The list of reproductively active materials covered here includes drugs, food additives, preservatives, ores, pesticides, dyes, and many other classes of materials. Some of the information also refers to materials of undefined composition. For each entry, the author provides the "DPIM" number, entry name, CAS number, molecular formula, molecular weight, a description of the material, and physical
