through agricultural and environmental research: Past, present, and future Mar 08 2021 Over the past decade, interest in gender equality and women's empowerment has grown rapidly, creating a unique opportunity to institutionalize gender research within agricultural research for development. This book, edited by researchers from the CGIAR Gender Platform, reviews and reflects on the growing body of evidence from gender research. It marks a shift a way from a traditional focus on how gender analysis can contribute to improved productivity, flipping the question to ask, How does agricultural and environmental research and development contribute to gender equality and women's empowerment? Chapters synthesize the wide range of CGIAR and other research in this area, covering breeding research and seed systems, value chain participation, nutrition-sensitive agriculture, natural resources, climate adaptation and mitigation, the

[Scientific writing for agricultural research scientists](#)

Dec 25 2019 This new, fully revised edition aims to serve as a guide for agricultural research scientists and other practitioners in writing papers for publication. It also looks to provide a resource manual for training courses in scientific writing. There are three new chapters on reporting statistical results, communicating science to non-scientific audiences and electronic publishing. In addition, the original chapters have all been rewritten to reflect current developments and to make the content more complete and easily comprehensible.

Agricultural Science Review

Oct 15 2021

Incorporating Cultures' Role in the Food and Agricultural Sciences Sep 14 2021

Incorporating Cultures' Role in the Food and Agricultural Sciences addresses the practical needs of the professors, administrators and students who often face challenges of working together with Indigenous peoples with whom they have no prior experience. Missed communication, failed projects and unrealistic goals are daily realities. Academia and industry often encounter frustration in recruiting and retaining Native American students and other ethnicities. This text is a guide for anyone working in the food or agriculture disciplines or industries, particularly for those working with people of a culture different from one's own. Comprehensive, full awareness of one's own culture is a prerequisite for effective teaching and learning within another culture. This book is

replete with stories, examples and peer-refereed journal articles to help build awareness. These stories, examples and articles from multiple voices are placed over a basic underlying framework that is summed up in the title of the book itself. Provides compelling, well-referenced practical ways to understand the cultural component of behavior related to food and agriculture Explores behavior in setting policy, developing curricula, interacting with communities and in making choices as a consumer Connects the dots between food deserts, the disgust factor and the world's grand challenges Includes lessons learned and new approaches in food and agricultural sciences using transdisciplinary, experiential action research methods Contains practical, state-of-the-art methodologies and diagrams to get started improving intercultural competency, inclusivity and internationalization of food and agricultural sciences

agricultural research. Contested Agronomy addresses these issues by exploring key developments since the mid-1970s, focusing in particular on the emergence of the neoliberal project and the rise of the participation and environmental agendas, taking into consideration how these have had profound impacts on the practice of agronomic research in the developing world especially over the last four decades. This book explores, through a series of case studies, the basis for a much needed 'political agronomy' analysis that highlights the impacts of problem framing and narratives, historical disjunctures, epistemic communities and the increasing pressure to demonstrate 'success' on both agricultural research and the farmers, processors and consumers it is meant to serve. Whilst being a fascinating and thought-provoking read for professionals in the Agriculture and Environmental sciences, it will also appeal to students. **Free**

Agricultural Research for Sustainable Food Systems in Sri Lanka Oct 03 2020

Food systems involve a range of activities concerning food production, processing, distribution, marketing and trade, preparation, consumption and disposal. They encompass the path of food from the farm to the dinner table, meeting the food and nutritional needs of a nation. When such systems do so without sacrificing the needs of future generations, they are referred to as "Sustainable Food Systems."

The natural and physical environment, infrastructure, institutions, society and culture, and policies and

regulations within which they operate, as well as the technologies they adopt, shape these systems' outcomes.

Making food systems more sustainable is a key priority for all nations, and Sri Lanka is no exception. Food systems deliver optimal performance when the policy and regulatory environment is conducive, institutions are supportive, and a combination of agricultural research investments and an efficient extension system generates the technologies and scientific evidence required for sound policymaking and agenda setting. Further, agricultural research can generate essential findings, technologies and policies for sustainable agricultural development - across disciplines, sectors and stakeholder groups. This book shares valuable insights into research conducted in the broad food and agriculture sectors in Sri Lanka. It also discusses the status quo in related disciplines, and outlines future research directions. Accordingly, it
