The Cognition of Basic Musical Structures Sep 02 2020 In this book, David Temperley addresses a fundamental question about music cognition: how do we extract basic kinds of musical information, such as meter, phrase structure, counterpoint, pitch spelling, harmony, and key from music as we hear it? Taking a computational approach, Temperley develops models for generating these aspects of musical structure. The models he proposes are based on preference rules, which are criteria for evaluating a possible structural analysis of a piece of music. A preference rule system evaluates many possible interpretations and chooses the one that best satisfies the rules. After an introductory chapter, Temperley presents preference rule systems for generating six basic kinds of musical structure: meter, phrase structure, contrapuntal structure, harmony, and key, as well as pitch spelling (the labeling of pitch events with spellings such as A flat or G sharp). He suggests that preference rule systems not only show how musical structures are inferred, but also shed light on other aspects of music. He substantiates this claim with discussions of musical ambiguity, retrospective revision, expectation, and music outside the Western canon (rock and traditional African music). He proposes a framework for the description of musical styles based on preference rule systems and explores the relevance of preference rule systems to higher-level aspects of music, such as musical schemata, narrative and drama, and musical tension.

SKILLS AND STRATEGIES, 2E helps students become stronger readers based on how the brain best processes and learns information. Christine Evans Carter has developed a powerful approach to building reading skills that is based on the latest research in brain-based learning; when students recognize the structure and organization of information, they maximize their learning power. This focus on text structure provides a scaffold onto which developmental-level readers can apply new knowledge. Information is presented in a carefully crafted sequence that serves to build upon prior knowledge and expand understanding of skills and strategies in a recursive manner. In addition, each chapter includes study skills and discipline-specific vocabulary and reading strategies to help students succeed in all of their courses. Reading for Thinking Jun 30 2020 Through a winning combination of easy-to-understand explanations, high-interest readings, and a carefully designed chapter sequence, Laraine Flemming's *READING FOR THINKING* takes the mystery out of critical reading for developmental students. Following a comprehensive review of essential learning and comprehension strategies such as evaluating websites, identifying main ideas, and using organizational patterns to aid remembering, Flemming shows how critical reading is a natural part of comprehending an author's message. Chapter by chapter, students expand their definition of comprehension to include evaluating a writer's purpose, recognizing tone, separating fact from opinion, and determining the degree of bias, while also learning how to summarize and synthesize different points of view on the same topic. In addition to marginal annotations modeling the skilled reader's response, a host of new readings, a new vocabulary feature, and brand new material about reading on the Web, the eighth edition of *READING FOR THINKING* expands the use of writing assignments to help students identify the strategies writers use to communicate their ideas to readers effectively. Oil and Gas Implied Covenants for the Twenty-First Century: The Next Steps in Evolution Dec 17 2021 Oil-and-Gas Implied Covenants for the Twenty-First Century: The Next Step in Evolution is the first book in over 75 years to be devoted to the implied covenants that courts apply to oil-and-gas and other natural-resource leases. Implied covenants, which apply to all oil-and-gas and other natural-resource leases that use a royalty structure, are hugely important. The United States has reclaimed its position as the world's largest natural-gas producer, it may soon again become the largest oil producer, and the oil-and-gas industry once again is rapidly growing. All this production comes from leased land. And the covenants are the basic body of law, an oilfield common law, developed to carry out the basic purpose of these leases. Oil-and-Gas Implied Covenants features an extended treatment of the issue of greatest controversy in recent years: whether the lessee has to bear all costs of making oil or gas "marketable," or instead can deduct some of those costs from the landowner's interest. Oil-and-Gas Implied Covenants also focuses on the duty to drill additional zones or formations. This affects many shale and other unconventional reservoirs -- the main sources of the surge in oil and gas production over the last decade. Many of these leases are being held by older wells producing from conventional reservoirs. The implied duty to develop and explore should empower lessors to force drilling into the new, unconventional reservoirs, too. If prices begin to drop and lessees begin cutting back on drilling, this duty will end up being a major litigation weapon in the geographic areas into which production is expanding today. On another issue that will be vitally important in the future but has received far too little recognition, the author surveys the law on environmental cleanup and restoration. It is the author's recommendation that lessor and lessee would be better served by treating these issues under a new contract-based implied duty to restore rather than the current treatment under the torts of negligence, nuisance, and trespass. The author also recommends that courts consider a new implied duty to disclose material facts and a new duty limiting costs deducted from the royalty share to actual, reasonable costs. Finally, Oil-and-Gas Implied Covenants illustrates how covenants should apply to hard minerals and other natural resources leased on a royalty-structure basis. And it identifies the areas where implied covenants should be useful to parties in international arbitration and litigation. Thus it points to important new applications of this settled body of law.

Landscapes: Groundwork for College Reading Jun 23 2022 *LANDSCAPES* is a comprehensive college reading preparatory text (spanning grade levels 8-10) that takes a metacognitive approach and focuses on how the brain processes information, often referred to as brain-based learning. Since metacognition can best be understood as thinking about thinking, the text consistently presents new information with written think alouds to model the thought process involved in applying skills and strategies to reading passages. Based on the premise that the brain learns best through organization of information, the text presents the recognition of text structure and organization as a fundamental skill--one that is especially important for students who have limited prior knowledge of a subject. This focus on text structure provides a scaffold onto which developmental-level readers can apply new knowledge. Information is presented in a carefully crafted sequence that serves to build upon prior knowledge and expand understanding of skills and strategies in a recursive manner. The knowledge of how we learn, the focus of the first chapter, permeates the text and informs the selection of strategies and skills to be introduced and mastered in a specific order. In addition, learning is treated as incremental, with the reader gradually taking more responsibility with each new chapter. While each chapter emphasizes carefully selected reading skills and strategies, thematic content for each chapter establishes solid background knowledge of and interest in the subject matter. Specific and relevant study skills and vocabulary skills are integrated within each chapter as well.
