Advanced Electric Drive Vehicles *Jun 27 2019* *Electrification is an evolving paradigm shift in the transportation industry toward more efficient, higher performance, safer, smarter, and more reliable vehicles. There is in fact a clear trend to move from internal combustion engines (ICEs) to more integrated electrified powertrains. Providing a detailed overview of this growing area, *Advanced Electric Drive Vehicles* begins with an introduction to the automotive industry, an explanation of the need for electrification, and a presentation of the fundamentals of conventional vehicles and ICEs. It then proceeds to address the major components of electrified vehicles—i.e., power electronic converters, electric machines, electric motor controllers, and energy storage systems. This comprehensive work: Covers more electric vehicles (MEVs), hybrid electric vehicles (HEVs), plug-in hybrid electric vehicles (PHEVs), range-extended electric vehicles (REEVs), and all-electric vehicles (EVs) including battery electric vehicles (BEVs) and fuel cell vehicles (FCVs) Describes the electrification technologies applied to nonpropulsion loads, such as power steering and air-conditioning systems Discusses hybrid battery/ultra-capacitor energy storage systems, as well as 48-V electrification and belt-driven starter generator systems Considers vehicle-to-grid (V2G) interface and electrical infrastructure issues, energy management, and optimization in advanced electric drive vehicles Contains numerous illustrations, practical examples, case studies, and challenging questions and problems throughout to ensure a solid understanding of key concepts and applications *Advanced Electric Drive Vehicles* makes an ideal textbook for senior-level undergraduate or graduate engineering courses and a user-friendly reference for researchers, engineers, managers, and other professionals interested in transportation electrification.*

The Conway Chronicles Aug 02 2022 Three books make up *The Conway Chronicles*. The first is 'The Last Werewolf,' in which a walk on the fells above a Lancashire village to escape the boredom of pandemic lockdown, ends with teenager Thomas Chester being followed home by what appears to be a blue-eyed Husky dog. Despite their best efforts the family cannot trace her owner because what they do not know is that the 'dog' is really Rozalia Lupuratu, the sole survivor of a group of immigrant werewolves from Transylvania who has managed to exist for seven years with a spectral pack of wolves on the fells but has now been told by the alpha male that she must leave and find a mate among her own kind. She chooses Thomas, but first she needs to return to human form which is not easy after so many years as a wolf. She finally manages it with the help of his cousin, a powerful young witch called Mary Conway. Then Thomas is struck down by the Coronavirus... Then comes 'Elf-Girl' where, in a children's playground in a Lancashire village a baby girl is stolen from her pram by an elf who had a brief liaison with her mother. Not understanding that human children grow up very differently to elves, Pinkie Dianthus takes little Tiffany to Fairyland to look after him in his old age. But he soon realises his mistake and he hurriedly returns her to her mother only to be collared by trainee werewolf Thomas Chester and his girlfriend Rosie. Powerful young witch, Mary Conway, makes him vow to leave Tiffany and her mother alone. But he soon breaks his promise and kidnaps his daughter twice more. She escapes but, because time runs strangely in Fairyland, each time she returns to the human realm she is older than when she left. When Tiffany is taken for a third time, just after the Beltane celebrations at Mary's new home, she decides the time has come to sort things out with the elves once and for all. Last comes 'Witch-Haven' which is the name of a big old Georgian house set deep in the Lancashire countryside bought by Mary Conway - an accomplished witch as well as being a PhD. She has barely got herself settled in before she offers a home to three half-elf girls and their mother, two trainee witches and a werewolf. Not forgetting the two-hundred-year-old witch who lives in the attic because the house once belonged to her but she went away on holiday for so long that she was declared dead and the house was sold to Dr Conway by her estate! Then something creeps in through a window in middle of the night...

Coherent Wireless Power Charging and Data Transfer for Electric Vehicles Aug 22 2021 Focusing on reducing emissions and improving fuel economy, automotive manufacturers are developing electric vehicles (EV) to replace fuel and diesel vehicles starting in 2030 onwards. The EVs, with their green power supplies maximize environmental benefits with zero emissions thereby lowering air pollution levels. There is now an increased demand for stable electric storage systems (ESS) that are part of the design of new electric vehicles. This timely reference gives an overview of modern electrical power systems applied in the current generation of electric vehicles which require an ESS, and how these can be utilized for simultaneous power and data communication. The book starts with an introduction to the topic, before giving a summary of the green power trend for the electric vehicle market. The book then delves into the theoretical and analytical framework required to understand adaptive compensation of the magnetic inductive system (ACMIS), based on zero voltage switch (ZVS). The chapters demonstrate how these systems are used for transmitting electric power from a single-end inverter combined with a compensated network of parallel to parallel (P-P) type and an auto-tuning impedance of LC tank. The book also covers the experimental method for a multifunctional contactless power flow of the G2V mode and bidirectional outer communication and inner communication with giant magnetoresistance (GMR) effect for car parking guidance. The experiment shows how to analyze data transferring performance including the current trimming method and how to evaluate data transmission quality according to the relevant parameters. Overall the book serves to familiarize automotive engineers and industry professionals involved in the electric vehicle market with the issues that surround wireless power charging and data transfer systems for electric vehicles, and introduces them to more coherent designs.
