Creating Cultural Capital Oct 22 2019 In recent years, the global creative economy has experienced unprecedented growth. Considerable research has been conducted to determine what exactly the creative economy is, what occupations are grouped together as such, and how it is to be measured. Organizations on various scales, from the United Nations to local governments, have released 'creative' or 'cultural' economy reports, developed policies for creative urban renewal, and directed attention to creative placemaking – the purposeful infusion of creative activity into specific urban environments. Parallel to these research and policy interests, academic institutions and professional organizations have begun a serious discussion about training programs for future professionals in the creative and cultural industries. We now have entire colleges offering undergraduate and graduate programs, leading to degrees in arts management, arts entrepreneurship, cultural management, cultural entrepreneurship or cultural economics. And many professional organizations offer specialized training and certificates in cultural heritage, museums studies, entertainment and film. In this book, we bring together over fifty scholars from across the globe to shed light on what we collectively call 'cultural entrepreneurship' – the training of professionals for the creative industries who will be change agents and resourceful visionaries that organize cultural,

financial, social and human capital, to generate revenue from a cultural and creative activity. Part I of this volume begins with the observation that the creative industries - and the cultural entrepreneurship generated within them - are a global phenomenon. An increasingly mobile, international workforce is moving cultural goods and services across national boundaries at unprecedented rates. As a result, the education of cultural professionals engaged in global commerce has become equally internationalized. Part II looks into the emergence of cultural entrepreneurship as a new academic discipline, and interrogates the theoretical foundations that inform the pedagogy and training for the creative industries. Design thinking, humanities, poetics, risk, strategy and the artist/entrepreneur dichotomy are at the heart of this discussion. Part III showcases the design of cultural entrepreneurship curricula, and the pedagogies employed in teaching artists and culture industry specialists. Our authors examine pedagogy and curriculum at various scales and in national and international contexts, from the creation of entire new schools to undergraduate/graduate programs. Part IV provides case studies that focus on industry- or sector-specific training, skills-based courses (information technology, social media, entrepreneurial competitions), and more. Part V concludes the book with selected examples of practitioner training for the cultural industries, as it is offered outside of academia. In addition, this section provides examples of how professionals outside of academia have informed academic training and course work. Readers will find conceptual frameworks for building new programs for the creative industries, examples of pedagogical approaches and skillsbased training that are based on research and student assessments, and concrete examples of program and course implementation.

Lean Enterprise Software and Systems Dec 04 2020 The LESS 2010 conference was the first scientific conference dedicated to advancing the "lean enterprise software and systems" body of knowledge. It fostered interactions by joining the lean product development community with the agile community coupled with innovative ideas nurtured by the beyond budgeting school of thinking. The conference was organized in collaboration with the Lean Software and Systems Consortium (LSSC). The conference is established as a conference series. The idea of the conference was to offer a unique platform for advancing the state of the art in research and practice by bringing the leading researchers and practitioners to the same table. Indeed, LESS 2010 attracted a unique mix of participants including academics, researchers, leading consultants and industry practitioners. The aim of the conference was to use this diverse community to advance research and practical knowledge concerning lean thinking within the field of software business and development. LESS 2010 had more than 60% of its speakers come from the industry and the remaining from academia. LESS is poised to grow as we advance into future iterations of the conference and become the conference for lean thinking in systems and software development. Its growth and credibility will be advanced by the communities and knowledge exchange platform it provides. LESS offers several avenues for knowledge exchange to create a highly collaborative environment. Each year, we aim to bring novelty to a program that fosters collaboration, letting new ideas thrive during and after the conference.

Small Enterprise Development in South-East Europe Sep 13 2021 Since the end of the Kosovo war in 1999, increasing attention has been paid to the problems of economic development and reconstruction in South-East Europe. In a context of limited resources, small and medium sized enterprises (SMEs) have a key role to play in creating jobs and building a dynamic entrepreneurial economy. Small Enterprise Development In South-East Europe presents important findings from recent empirical research on key factors, which hinder sustainable SME growth in South-East Europe. Finance is identified as a critical barrier to growth, and the role of commercial banks, micro-finance institutions and credit cooperatives in assisting growth is addressed. Yet finance alone is not enough. A rebuilding of social capital, a reduction of the unofficial or grey economy, and the promotion of inter-firm networks and clusters are also of vital importance in promoting sustainable growth. The book concludes with critical analyses of SME policies in Albania, Croatia, and Macedonia, countries which hitherto have received little attention in the literature. Small Enterprise Development in South-East Europe will be of great interest to policy makers, business consultants, and academics and post-graduate students working on economic development and reconstruction in South-East Europe.

Azure Active Directory for Secure Application Development Dec 24 2019 Develop secure applications using different features of Azure Active Directory along with modern authentication techniques and protocols Key Features • Confidently secure your Azure applications using the tools offered by Azure AD • Get to grips with the most modern and effective authorization and authentication protocols • Unlock the potential of Azure AD's most advanced features including Microsoft Graph and Azure AD B2C Book Description Azure Active Directory for Secure

Application Development is your one-stop shop for learning how to develop secure applications using modern authentication techniques with Microsoft Azure AD. Whether you're working with single-tenant, multi-tenant, or line-of-business applications, this book contains everything you need to secure them. The book wastes no time in diving into the practicalities of Azure AD. Right from the start, you'll be setting up tenants, adding users, and registering your first application in Azure AD. The balance between grasping and applying theory is maintained as you move from the intermediate to the advanced: from the basics of OAuth to getting your hands dirty with building applications and registering them in Azure AD. Want to pin down the Microsoft Graph, Azure AD B2C, or authentication protocol best practices? We've got you covered. The full range of Azure AD functionality from a developer perspective is here for you to explore with confidence. By the end of this secure app development book, you'll have developed the skill set that so many organizations are clamoring for. Security is mission-critical, and after reading this book, you will be too. What you will learn • Get an overview of Azure AD and set up your Azure AD instance • Master application configuration and the use of service principals • Understand new authentication protocols • Explore the Microsoft Identity libraries • Use OpenID Connect, OAuth 2.0, and MSAL to make sign-in fully secure • Build a custom app that leverages the Microsoft Graph API • Deploy Azure AD B2C to meet your security requirements • Create user flows and policies in Azure AD B2C Who this book is for If you are a developer or architect who has basic knowledge of Azure Active Directory and are looking to gain expertise in the application security domain, this is the book for you. Basic Azure knowledge and experience in building web applications and web APIs in C# will help you get the most out of this book.

Rapid Mobile Enterprise Development for Symbian OS Jan 05 2021 A guide to programming Symbian OS smartphones using OPL (The Open Programming Language): a simple to learn, open-source scripting language, ideal for fast-track development of enterprise applications. This book provides a hands-on development environment for both the experienced and aspiring programmer, demonstrating the ease of use of Symbian OS technologies through the utilization of OPL. OPL has a shallow learning curve which allows bespoke corporate tools to be developed in house by technical staff who aren't necessarily trained programmers. Rapid Mobile Enterprise Development For Symbian OS provides a clear guide on both how to program, and understanding the structure of the language through a keyword dictionary. Any bespoke OPL application can grow with a company, eventually providing access to more advanced C++ code through OPX extensions. From the home programmer who wants to do more with their phone, to the enterprise developer, Rapid Mobile Enterprise Development For Symbian OS is the ideal starting point for simple, innovative application design using OPL. Implications for Entrepreneurship and Enterprise Development in the Blue Economy Jul 11 2021 The blue economy is a widely used concept in policy circles; however, people across a wide spectrum have a peripheral understanding of the phenomenon. At the moment, there are several conflicting understandings of the blue economy but no universally accepted definition and veritable measures. Considering the existential importance of the blue economy for the protection of marine environments and sustainability of businesses, there is an urgent need for rigorous conceptual, policy-focused, theoretical, and empirical studies on the subject from multidisciplinary perspectives. Implications for Entrepreneurship and Enterprise Development in the Blue Economy enriches existing definitions of a blue economy with inputs from a multidisciplinary lens and provides veritable measures for evaluating blue economy progression and compliance. Covering topics such as economics, natural resource development, social equity, and sustainability, this reference work is ideal for policymakers, entrepreneurs, managers, oceanographers, marine biologists, scholars, industry professionals, government officials, academicians, researchers, practitioners, instructors, and students.

Green Technology Applications for Enterprise and Academic Innovation Mar 27 2020 In the age of corporate responsibility, green technology and sustainability continue to grip the consciousness of business and academic institutions. However, development of appropriate business-driven green applications requires an awareness of best practices of the green agenda. Green Technology Applications for Enterprise and Academic Innovation addresses the importance of green technology and sustainability for technology, enterprise, and academic innovation in energy management, renewable energy, and carbon reduction strategies. This book acts as the bridge for practitioners, academia, businesses, industrialists, governmental executives, and students seeking research in this emerging area.

The Book Business Jun 10 2021 Many of us read books every day, either electronically or in print. We remember the books that shaped our ideas about the world as children, go back to favorite books year after year, give or lend books to loved ones and friends to share the stories we've loved especially, and discuss important books with fellow readers in book clubs and online communities. But for all the ways books influence us, teach us, challenge us, and connect us, many of us remain in the dark as to where they come from and how the mysterious world of publishing truly works. How are books created and how do they get to readers? The Book Business: What Everyone Needs to Know® introduces those outside the industry to the world of book publishing. Covering everything from the beginnings of modern book publishing early in the 20th century to the current concerns over the alleged death of print, digital reading, and the rise of Amazon, Mike Shatzkin and Robert Paris Riger provide a succinct and insightful survey of the industry in an easy-to-read question-and-answer format. The authors, veterans of "trade publishing," or the branch of the business that puts books in our hands through libraries or bookstores, answer questions from the basic to the cutting-edge, providing a guide for curious beginners and outsiders. How does book publishing actually work? What challenges is it facing today? How have social media changed the game of book marketing? What does the life cycle of a book look like in 2019? They focus on how practices are changing at a time of great flux in the industry, as digital creation and delivery are altering the commercial realities of the book business. This book will interest not only those with no experience in publishing looking to gain a foothold on the business, but also those working on the inside who crave a bird's eye view of publishing's evolving landscape. This is a moment of dizzyingly rapid change wrought by the emergence of digital publishing, data collection, e-books, audio books, and the rise of self-publishing; these forces make the inherently interesting business of publishing books all the more fascinating.

Behavioral Determinants of Enterprise Development and Innovation Sep 01 2020 The second issue in 2020 of the quarterly published JEMI explores enterprise development and innovation. The behavioral determinants of the economic ventures indicated by the authors is a continually developing trend of research in economic sciences. Contemporary enterprises are increasingly investing their resources in obtaining information on factors that stimulate employee behavior in order to increase efficiency or develop innovation. Behavioral approach is also used in seeking answers to questions about the development of small and medium enterprises (SMEs) posed by entities responsible for supporting the SME sector. In economic sciences, behavioral approaches result from an interdisciplinary view on the behavior of people participating in economic life. The behaviors of entrepreneurs, managers, other participants in an organization, clients, and entities supporting economic activities are an essential subject of research interest. The presented articles show the research perspectives that contribute to the development of a behavioral stream in economic sciences. The first article proposes a triangulation of theoretical foundations for behavioral research in economic sciences. Dominika Korzeniowska and Łukasz Sułkowski reviewed the scientific literature and analyzed 37 articles and 21 monographs selected from scientific databases. As a result of their research, the authors concluded that by adopting different research perspectives in behavioral economics, rather than just a cognitive one, it is possible to enrich both theoretical and empirical foundations in scientific research. Discovering human economic behavior can be done using methods and techniques appropriate to research, e.g. in behavioral or evolutionary trends. The authors conduct their analysis in relation to three paradigms: cognitive, behavioral and evolutionary, and then come to the conclusion that these approaches should not be treated as competitive but complementary knowledge of economic behavior. For example, the evolutionary approach in psychology makes it easier to explain the genetics of certain automatic response patterns that have developed during evolution. Its usefulness is expressed in the possibilities of creating an image of the human economic mind or economic society. In turn, the use of behavioral approaches, according to the authors, allows finding ways to eliminate the effects of mental traps appearing in the processes of making economic decisions and other problem situations. The authors in their research refer to three research trends, but ultimately

encourage the search for other theories and concepts in the study of human economic behavior and their impact on business ventures. The next article presents field studies carried out in West Sumatra. The authors use psychoeconomic factors lying on the side of entrepreneurs to study failures in their business operations. An essential aspect of the research is the identification and analysis of opportunistic behavior and its impact on the success or failure of operations. Hafiz Rahman, Eri Besra, and Nurhayati conducted quantitative research using multiple and partial regression analysis on a sample of 1541 young entrepreneurs from the West Sumatra province in Indonesia, who had experienced failures in their earlier enterprises. It was found that psycho-economic factors, together with the opportunistic behavior of individuals, more or less, caused the entrepreneurial failure. The obtained research results also formed the basis for the claim that opportunistic behavior can be seen as both a source of business success and failure. The authors believe that the research should be of interest to the Indonesian government, as it suggests that the creation of entrepreneurial resilience takes place in a process that also considers the failures of undertaken enterprises. Young entrepreneurs usually draw conclusions from the mistakes they made, which is why it is postulated to support them even in situations of failure, e.g. through entrepreneurship capacity building programs. In addition to economic and business knowledge, it is necessary to build mental resilience, develop maturity, logically consider the choice of alternatives, improve decision-making processes, and deal with social pressure. The subject of interest of the author of the third article is organizational behaviors that affect high performance. Przemysław Zbierowski presented the results of his research, conducted on a sample of 406 enterprises, using the computer-assisted personal interview (CAPI) technique. Based on the collected research material, the author analyzed the impact of high-performance organizational features on actual organizational performance, and the indirect impact on organizational citizenship and entrepreneurship-oriented behavior. As the author notes, his research contributes to the scientific debate in at least three ways. Firstly, it confirms that the features of high performance have a strong impact on the actual performance of the enterprise, which is not surprising but verifies the hypothesis. Secondly, it indicates entrepreneurial orientation as a partial mediator in this relationship. Finally, he discovers the very strong impact that high-performance features have on the organization's civic behavior. The article also has practical implications. The obtained research results form the basis for developing organizational citizenship and entrepreneurship orientation through the skillful use of high-performance factors. Behavioral research trends in economic sciences also include the research presented in the fourth article regarding employee behavior and their development stimulated by managerial coaching. Ghulam Abid, Saira Ahmed, Tehmina Fiaz Qazi, and Komal Sarwar filled the research gap in the field of sustainable employee development in the organization. The research

conducted by them is pioneering. The authors relate to the context of work and individual differences in promoting a thriving workplace. The intervention mechanism of self-efficacy and prosocial motivation in the relationship between managerial coaching and thriving at work was explored using a sequential mediation approach. Data were analyzed using Hayes' Process Model 6 based on 1,000 bootstrap resampling with an actual sample of 221 respondents. The obtained results confirm that managerial coaching increases employee self-efficacy. The goal of coaching is to increase the employee's sense of self-efficacy in connection with a particular activity so that he or she can perform his or her tasks effectively and efficiently. Efficiency among employees directly activates positive moods that help engage employees and trigger prosocial behavior. This study contributes to the detection of awareness related to the links between prosocial motivation and employee development and provides an additional, comprehensive analysis of the procedure for obtaining the positive effects of managerial coaching. Another group of articles relates to the behavioral aspects of developing innovation in enterprises in relation to employees, as well as the implementation of innovation by customers. Determinants of innovation in enterprises have become the subject of the research interests of Izabella Steinerowska-Streb and Grzegorz Głód. The authors presented the results of their research, which was conducted on a sample of 353 Polish family businesses. In the course of the conducted research, it was possible to determine whether family businesses that introduced the creative ideas of their employees were more innovative than others. The company's innovativeness can be expressed in the product, process, marketing, or organizational area. The authors also examined the relationship between the innovation of family businesses and their involvement in activities that stimulate creative thinking, build trust in the workplace, stimulate employee development, and support team integration. The study revealed that family businesses that are aware of the importance of creative employees, and that bring their employees' creative ideas into business practice, are more innovative than other family businesses. In addition, it was found that an increase in company innovation exists when the company supports employee development. Interesting behavioral aspects are presented in the research on employee resistance to implementing technological innovations. Çiğdem Sıcakyüz and Oya Hacire Yüregir conducted a study of medical personnel at a public hospital in Adana, Turkey, to investigate the reasons for employee resistance to implementing an IT system. The Technology Acceptance Model (TAM) was expanded to include factors such as affective commitment, gender, and age. Based on the data collected from 291 surveys, a regression analysis was conducted, which led to the formulation of conclusions regarding the usefulness of information technology, its ease of use, and affective commitment. It was examined whether demographic factors such as age, gender, position, and tenure are associated with resistance to implemented technological innovations. The results of this study confirm

earlier models of technology acceptance. The practical implications of the study relate to the need to increase employee participation in making decisions about the change process. The examined resistance of employees to technological innovations should also be treated as an essential voice in the discussion of problems related to managing change in the organization. In the article presented by Neema Mori and Rosallia Mlambiti, attention was focused on the acceptance of product innovation by customers. The research was carried out in Tanzania using the example of mobile banking services. To examine the impact of demographic factors on the adoption of innovative mobile banking services, Rogers' Diffusion Innovation Theory (DIT) was applied to 416 clients of a leading bank in Tanzania. Regression results showed a positive and significant relationship between income level and education on the one hand, and the adoption of mobile banking on the other. Practical implications refer to the recommendations to develop promotional practices and awareness campaigns and capture customer demographic profiles to encourage them to use mobile banking. The study showed the importance of using the situational theory to adopt innovative technologies in banking services in Tanzania. The authors indicate that this approach to research issues, broadens the understanding of the importance of demographic factors, especially in relation to the Sub-Saharan African region, and also contributes to a better understanding of mobile banking from the point of view of the bank's customers in Tanzania. The last article covers a bibliometric analysis of published research results in the field of business innovation, its financing, and policy framework. The analysis was based on the resources of the Web of Science Core Collection using Vosviewer for the period 1990–2019. The researched publications were divided according to the research area, and then the research gaps were identified. In total, 437 articles were found that went through various stages of selection. 32 publications were analyzed in detail, and the study presents citations received by each of these selected publications and their summaries. Thematically grouped summaries show the areas that the researchers paid more or less attention to. The conducted research allowed the authors to state that the countries involved in a higher level of innovation had a higher level of publication. Few studies on this topic have been developed in emerging economies such as Africa and Asia, excluding China and Taiwan. A similar situation was noted for countries in the Middle East. Most of the research comes from the United States and European countries. The article also refers to aspects such as the time horizon of research, approach, and research methods. The results of the presented research allow readers to get acquainted with the current state of publications on the subject of financing innovation and policy in this field. The editors express the hope that the articles presented will contribute to the development of knowledge on behavioral aspects of the functioning of enterprises and the development of innovation. The authors' extension of the research perspective with behavioral determinants, strengthens our belief in the

legitimacy of supporting this research trend in JEMI. We thank all the researchers and authors for enriching their studies, broadening the perspective of resolving complex management problems, and developing innovation in organizations dispersed in geographical, economic, and cultural terms. We hope all readers will find this second issue of JEMI in 2020 both interesting and informative.

Business services in support of farm enterprise development: a review of relevant experiences Apr 08 2021 This Occasional Paper presents the study findings of approaches to the design and delivery of business services to farmers and rural entrepreneurs. Interventions aimed at business service provision and designed and developed by donors have commonly been termed Business Development Services (BDS). BDS has largely focused on reducing poverty by raising the incomes of farmers and rural entrepreneurs. The term business services, refers to the range of non financial services provided to micro and small enterprises (MSEs) at various stages in their development. They embody a market development approach to the provision of support services1. This Occasional Paper presents findings from a study conducted on approaches to the design and delivery of business services to farmers and rural entrepreneurs. The paper is based upon an extensive literature review of BDS and other business-related service interventions, supported by selected case studies in Asia and Africa. Business services are aimed at assisting farmers and rural entrepreneurs to overcome internal and external constraints to their farm business start-up, development and performance. Contained within the broad concept are such activities as group training,

individual counselling, advice, the development of new commercial entities, technology development and transfer, information provision, business links and policy advocacy.
