Linking Apr 12 2021 Linking is one of the challenges for theories of the syntax-semantics interface. In this new approach, the author explores the hypothesis that the positions of syntactic arguments are strictly determined by lexical argument geometry. Through careful argumentation and original analysis, her study provides a framework for explaining the linking patterns of a range of verb classes, leading to a number of insights about lexical structure and a radical rethinking of many verb classes.

Minding Spirituality Sep 25 2019 In Minding Spirituality, Randall Sorenson, a clinical psychoanalyst, "invites us to take an interest in our patients' spirituality that is respectful but not diffident, curious but not reductionistic, welcoming but not indoctrinating." Out of this invitation emerges a fascinating and broadening investigation of how contemporary psychoanalysis can "mind" spirituality in the threefold sense of being bothered by it, of attending to it, and of cultivating it. Both the questions Sorenson asks, and the answers he begins to formulate, reflect progressive changes in the psychoanalytic understanding of spirituality. Sorenson begins by quantitatively analyzing 75 years of journal literature and documenting how psychoanalytic approaches to religious and spiritual experiences have evolved far beyond the "wholesale pathologizing of religion" prevalent during Freud's lifetime. Then, in successive chapters, he explores and illustrates the kind of clinical technique appropriate to the modern treatment of religious issues. And the issue of technique is consequential in more than one way -- Sorenson presents evidence that how analysts work clinically has a greater impact on their patients' spirituality than the patients' own parents have. Sorenson brings an array of disciplinary perspectives to bear in examining the multiple relationships among psychoanalysis, religion, and spirituality. Empirical analysis, psychoanalytic history, sociology of religion, comparative theory, and sustained clinical interpretation all enter into his effort to open a dialogue that is clinically relevant. Turning traditional critiques of psychoanalytic training on their head, he argues that psychoanalytic education has much to learn from models of contemporary theological education. Beautifully crafted and engagingly written, Minding Spirituality not only invites interdisciplinary dialogue but, via Sorenson's wide-ranging and passionately open-minded scholarship, exemplifies it.

Sintering: From Empirical Observations to Scientific Principles Oct 26 2019 As sintering applications march toward a \$30 billion global business, the models for sintering have progressed, but generally follow behind observation. Documentation of the steps needed to build to a quantitative and predictive theory are often missed. Sintering: From Empirical Observations to Scientific Principles partitions sintering applications and observations to show critical turning points required to establish modern sintering as a predictive science. This book, written by the most cited author in his field, is laced with people, organizations, critical steps, and important formulations in a mixture of history, personalities, and applications. Exploring how insights in seemingly unrelated fields sparked progress, it is also a teaching tool to show where there is success, where there are problems, and how to organize teams to leapfrog to new applications or plateaus of use. Randall German's Sintering: From Empirical Observations to Scientific Principles is a platform for directly addressing the critical control parameters in these new research and development efforts. Shows how the theories and understanding of sintering were developed and improved over time, and how different products were developed, ultimately leading to important knowledge and lessons for solving real sintering problems Covers all the necessary infrastructure of sintering theory and practice, such as atomic theory, surface energy, microstructure, and measurement and observation tools Introduces the history and development of such early sintered products as porcelain, tungsten lamp filaments, bronze bearings, steel automotive components, platinum crucibles and more

From a Far Country Feb 08 2021 In From a Far Country Catharine Randall examines Huguenots and their less-known cousins the Camisards, offering a fresh perspective on the important role these French Protestants played in settling the New World. The Camisard religion was marked by more ecstatic expression than that of the Huguenots, not unlike differences between Pentecostals and Protestants. Both groups were persecuted and emigrated in large numbers, becoming participants in the broad circulation of ideas that characterized the seventeenth- and eighteenth-century Atlantic world. Randall vividly portrays this French Protestant diaspora through the lives of three figures: Gabriel Bernon, who led a Huguenot exodus to Massachusetts and moved among the commercial elite; Ezéchiél Carré, a Camisard who influenced Cotton Mather's theology; and Elie Neau, a Camisard-influenced writer and escaped galley slave who established North America's first school for blacks. Like other French Protestants, these men were adaptable in their religious views, a quality Randall points out as quintessentially American. In anthropological terms they acted as code shifters who manipulated multiple cultures. While this malleability ensured that French Protestant culture would not survive in externally recognizable terms in the Americas, Randall shows that the culture's impact was nonetheless considerable.

Honeybees of Asia Feb 20 2022 A multi-authored work on the basic biology of Asian honeybees, written by expert specialists in the field, this book highlights phylogeny, classification, mitochondrial and nuclear DNA, biogeography, genetics, physiology, pheromones, nesting, self-assembly processes, swarming, migration and absconding, reproduction, ecology, foraging and flight, dance languages, pollination, diseases/pests, colony defensiveness and natural enemies, honeybee mites, and interspecific interactions. Comprehensively covering the widely dispersed literature published in European as well as Asian-language journals and books, "Honeybees of Asia" provides an essential foundation for future research.

Closure Feb 29 2020 When a prominent lawyer is shot while waiting at a suburban stop sign it sets off a nation-wide manhunt for an elusive killer. Special Agent Jack Randall of the FBI finds himself appointed to track down and stop the shooter. Not by his superiors, but by the killer himself. As more bodies fall the shooter takes his message to the press, earning the support of the public with his choice of targets and confounding the FBI at every turn. From the desert of Nevada to the urban jungle of New York City, Jack and his team follow the trail of bodies and haunting messages left behind by the killer. With the pressure to find him mounting on Jack, the assassin's crimes grow bolder, and his message more sinister and closer to home. It becomes clear to Jack that in order to find the shooter, he may have to look inside his own past, and become the man he was years ago.

Ideologies in Archaeology May 02 2020 Archaeologists have often used the term ideology to vaguely refer to a realm of ideas. Scholars from Marx to Zizek have developed a sharper concept, arguing that ideology works by representing or misrepresenting power relations through concealment, enhancement, or transformation of real social relations between groups. Ideologies in Archaeology examines the role of ideology in this latter sense as it pertains to both the practice and the content of archaeological studies. While ideas like reflexive archaeology and multivocality have generated some recent interest, this book is the first work to address in any detail the mutual relationship between ideologies of the past and present ideological conditions producing archaeological knowledge. Contributors to this volume focus on elements of life in past societies that went without saying and that concealed different forms of power as obvious and unquestionable. From the use of burial rites as political theater in Iron Age Germany to the intersection of economics and elite power in Mississippian mound building, the contributors uncover complex manipulations of power that have often gone unrecognized. They show that Occam's razor's tendency to favor simpler explanations is sometimes just an excuse to avoid dealing with the historical world in its full complexity. Jean-Paul Demoule's concluding chapter echoes this sentiment and moreover brings a continental European perspective to the preceding case studies. In addition to situating this volume in a wider history of archaeological currents, Demoule identifies the institutional and cultural factors that may account for the current direction in North American archaeology. He also offers a defense of archaeology in an era of scientific relativism, which leads him to reflect on the responsibilities of archaeologists. Includes contributions by: Susan M. Alt, Bettina Arnold, Uzi Baram, Reinhard Bernbeck, Matthew David Cochran, Jean-Paul Demoule, Kurt A. Jordan, Susan Kus, Vicente Lull, Christopher N. Matthews, Randall H. McGuire, Rafael Micó, Cristina Rihuete Herrada, Paul Mullins, Sue Novinger, Susan Pollock, Victor Raharijaona, Roberto Risch, Kathleen Sterling, Ruth M. Van Dyke, and LouAnn Wurst

Archaeology as Political Action Jan 28 2020 "It is rare to read an archaeological book that has the capacity to inspire, as this one has."—Mark P. Leone, author of *The Archaeology of Liberty in an American Capital* "Archaeology as Political Action is a highly original work that will be important for archaeologists and others concerned with processes of social change in the world today and, more importantly, with making a difference."—Thomas C. Patterson, coeditor of *Foundations of Social Archaeology* "This powerful statement by a leading archaeological thinker has profound implications for rigorous archaeological interpretation, community collaboration, and political intervention."—Stephen W. Silliman, coeditor of *Historical Archaeology*

A Marxist Archaeology Nov 07 2020 Marxism is a rich intellectual tradition that offers archaeologists a way around many of the seemingly irresolvable theoretical oppositions that beset us and as such deserves a place in the theoretical and substantive debates in archaeology. This introduction to Marxist theory as it applies to archaeology explores long-term historical change and cultural evolution, and advocates a dialectical and historical approach to the study of the past. The book was originally published by Academic Press in 1992 but this affordable paperback edition features an extensive new introduction by the author.

Transforming Archaeology Jun 22 2019 Archaeology for whom? The dozen well-known contributors to this innovative volume suggest nothing less than a transformation of the discipline into a service-oriented, community-based endeavor. They wish to replace the primacy of meeting academic demands with meeting the needs and values of those outside the field who may benefit most from our work. They insist that we employ both rigorous scientific methods and an equally rigorous critique of those practices to ensure that our work addresses real-world social, environmental, and political problems. A transformed archaeology requires both personal engagement and a new toolkit. Thus, in addition to the theoretical grounding and case materials from around the world, each contributor offers a personal statement of their goals and an outline of collaborative methods that can be adopted by other archaeologists.

Thing Explainer Dec 09 2020 From the No. 1 bestselling author of *What If?* - the man who created xkcd and explained the laws of science with cartoons - comes a series of brilliantly simple diagrams ('blueprints' if you want to be complicated about it) that show how important things work: from the nuclear bomb to the biro. It's good to know what the parts of a thing are called, but it's much more interesting to know what they do. Richard Feynman once said that if you can't explain something to a first-year student, you don't really get it. In *Thing Explainer*, Randall Munroe takes a quantum leap past this: he explains things using only drawings and a vocabulary of just our 1,000 (or the ten hundred) most common words. Many of the things we use every day - like our food-heating radio boxes ('microwaves'), our very tall roads

('bridges'), and our computer rooms ('datacentres') - are strange to us. So are the other worlds around our sun (the solar system), the big flat rocks we live on (tectonic plates), and even the stuff inside us (cells). Where do these things come from? How do they work? What do they look like if you open them up? And what would happen if we heated them up, cooled them down, pointed them in a different direction, or pressed this button? In Thing Explainer, Munroe gives us the answers to these questions and many, many more. Funny, interesting, and always understandable, this book is for anyone -- age 5 to 105 -- who has ever wondered how things work, and why.
