Forensic Practitioner's Guide to the Interpretation of Complex DNA Profiles Jun 17 2021 Over the past twenty years, there's been a gradual shift in the way forensic scientists approach the evaluation of DNA profiling evidence that is taken to court. Many laboratories are now adopting 'probabilistic genotyping' to interpret complex DNA mixtures. However, current practice is very diverse, where a whole range of technologies are used to interpret DNA profiles and the software approaches advocated are commonly used throughout the world. Forensic Practitioner's Guide to the Interpretation of Complex DNA Profiles places the main concepts of DNA profiling into context and fills a niche that is unoccupied in current literature. The book begins with an introduction to basic forensic genetics, covering a brief

historical description of the development and harmonization of STR markers and national DNA databases. The laws of statistics are described, along with the likelihood ratio based on Hardy-Weinberg equilibrium and alternative models considering sub-structuring and relatedness. The historical development of low template mixture analysis, theory and practice, is also described, so the reader has a full understanding of rationale and progression. Evaluation of evidence and statement writing is described in detail, along with common pitfalls and their avoidance. The authors have been at the forefront of the revolution, having made substantial contributions to theory and practice over the past two decades. All methods described are open-source and freely available, supported by sets of test-data and links to web-sites with further information. This book is written primarily for the biologist with little or no statistical training. However, sufficient information will also be provided for the experienced statistician. Consequently, the book appeals to a diverse audience Covers short tandem repeat (STR) analysis, including database searching and massive parallel sequencing (both STRs and SNPs) Encourages dissemination and understanding of probabilistic genotyping by including practical examples of varying complexity Written by authors intimately involved with software development, training at international workshops and reporting cases worldwide using the methods described in this book

The Quantified Process Approach to Neuropsychological Assessment Aug 27 2019 Since the late 1800s psychologists have been interested in discerning the strategies subjects employ to solve psychological tests (Piaget, 1928, Werner, 1940, Gesell, 1941). Much of this work, however, has relied on qualitative observations. In the 1970s, Edith Kaplan adopted this approach to the analysis of standardized neuropsychological measures. Unlike her predecessors, Dr. Kaplan and her colleagues emphasized the application of modern behavioral neurology to the analysis of the test data. Her approach was later termed the Boston Process Approach to neuropsychological assessment. While Edith Kaplan's work generates a great deal of enthusiasm, the qualitative nature of her analyses did not allow for its adoption by mainstream neuropsychologists. However, in recent years this limitation has begun to be addressed. Clinicians and researchers have developed new methodologies for quantifying the Boston Process Approach, leading to the emergence of a new field, which is collectively termed the Quantified Process Approach. Quantified Process Approach to Neuropsychological Assessment outlines the rationale for the emergence of this new approach and reviews the state of the art research literature and up to date clinical applications as they pertain to the evaluation of neuropsychiatric, head injured, and learning disabled patients. When available, norms and scoring forms are included in the appendices.

A Grammatical and Exegetical Study of New Testament Verbs of Transference Jul 19 2021 This study continues the adaptation of the method of Case Frame analysis for the investigation of the Greek text of the New Testament. Case Frame analysis distinguishes the words of a language into two categories, predicators [words that require completion by other words for their correct grammatical use] and non-predicators [words that do not require such completion],

and provides rigorous procedures for describing the syntactic, semantic, and lexical requirements that predicates impose on the words that complete their meaning. The inclusion of semantic function and feature descriptions in Case Frame analysis permits the development of a new genre of lexicon that specifies not only syntactic and lexical information (as do traditional dictionaries) but detailed semantic information. The resulting Case Frame lexicon entries are both more compact and more nuanced than traditional lexicon entries. Danove conducts an exhaustive Case Frame analysis of the ditransitive verbs of transference in the New Testament. He uses this analysis to develop a set of descriptive guidelines for interpreting and translating the various usages of ditransitive verbs of transference and applies these rules in exegetical studies of the text of the New Testament to generate a Case Frame lexicon of the verbs of transference in the New Testament. This study will distinguish the requirements of the 127 New Testament verbs of transference according to four syntactic functions, twelve semantic functions, and 22 lexical realizations. This will permit a rigorous investigation of all occurrences of verbal complements with the same syntactic, semantic, and lexical attributes. The study also will consider the influence of one semantic feature [an inherent quality of words that has implications for their lexical realization] and of the 'intrusion' of four grammatical constructions [inherent structuring templates of grammar that govern syntactic, semantic, and lexical attributes and modify meaning] on each category of complements with the same syntactic, semantic and lexical description. This will produce a rigorous description of meaning that becomes the basis for Danove's contributions to the linguistic study of biblical Greek and to the exegesis of biblical texts.

Understanding Test and Exam Results Statistically Jun 29 2022 *This book shares the goal of the classic text *How to Lie with Statistics*, namely, preventing and correcting statistical misconceptions that are common among practitioners, though its focus is on the educational context. It illustrates and discusses the essentials of educational statistics that will help educational practitioners to do this part of their job properly, i.e., without making conceptual mistakes. The examples are cast in the school/classroom contexts, based on realistic rather than theoretical examples. "The strongest aspect of the work or author's view is that the author can put himself in the shoes of teachers and make the work a very practical guide for teachers and school leaders. As a very experienced educator and researcher, the author knows very well about the knowledge skills that are essential for the professional development of teachers. He is able to explain the statistical and measurement concepts in plain language and with examples that are highly relevant to the target audience. In addition, the author also conveyed an important message to the target audience throughout the work... by pointing out the mistakes and misunderstandings of the*

interpretation of test scores and measurement design. The author reminds the audience about the importance of proper use of tests and test scores when teachers and school leaders make any education decisions, which has much implication on the professional integrity of teachers and school leaders.” Dr. Joyce Kwan, The Education University of Hong Kong, Hong Kong “This book covers all the statistical tools for analyzing educational data and provides examples to explain the ideas. Chapters 10-17 are practical data analysis in educational data that helps readers have a better understanding of the procedure to analyze the data.” Dr. Alpha Ling, The Education University of Hong Kong, Hong Kong “It looks like a very interesting book with attractive topics and practical problems in educational statistics.
