Organizational Change in Transition Societies Jun 24 2019 This book discusses change management paradigms with special reference to examples and cases from the transition societies in Central and Eastern Europe (CEE). The first chapter analyses developments and trends in the wider societal context of Central and Eastern Europe. Theoretical perspectives are applied to understand the processes of transition and EU accession in Central and Eastern Europe. Following the second and third chapters, the most frequently used tools and procedures of change management are analysed from the perspective of a CEE organization. The special advantage of the text to the

potential readership is the integration of 'macro' (societal) and 'micro' (organizational) points of view towards understanding change. The text also provides real-life examples and perspectives of understanding and managing change from Central and Eastern Europe, which helps the reader to grasp the wider political, economic and societal context(s) of the CEE region.

An Introduction to Bispectral Analysis and Bilinear Time Series Models Jun 16 2021 The theory of time series models has been well developed over the last thirty years. Both the frequency domain and time domain approaches have been widely used in the analysis of linear time series models. However, many physical phenomena cannot be adequately represented by linear models; hence the necessity of nonlinear models and higher order spectra. Recently a number of nonlinear models have been proposed. In this monograph we restrict attention to one particular nonlinear model, known as the "bilinear model". The most interesting feature of such a model is that its second order covariance analysis is very similar to that for a linear model. This demonstrates the importance of higher order covariance analysis for nonlinear models. For bilinear models it is also possible to obtain analytic expressions for covariances, spectra, etc. which are often difficult to obtain for other proposed nonlinear models. Estimation of bispectrum and its use in the construction of tests for linearity and symmetry are also discussed. All the methods are illustrated with simulated and real data. The first author would like to acknowledge the benefit he received in the preparation of this monograph from delivering a series of lectures on the topic of bilinear models at the University of Bielefeld, Ecole Normale Supérieure, University of Paris (South) and the Mathematisch Centrum, Amsterdam.
