[The Impacts of the Affordable Care Act on Preparedness Resources and Programs](#) Jul 18 2021 "Many of the elements of the Affordable Care Act (ACA) went into effect in 2014, and with the establishment of many new rules and regulations, there will continue to be significant changes to the United States health care system. It is not clear what impact these changes will have on medical and public health preparedness programs around the country. Although there has been tremendous progress since 2005 and Hurricane Katrina, there is still a long way to go to ensure the health security of the Country. There is a commonly held notion that preparedness is separate and distinct from everyday operations, and that it only affects emergency departments. But time and time again, catastrophic events challenge the entire health care system, from acute care and emergency medical services down to the public health and community clinic level, and the lack of preparedness of one part of the system places preventable stress on other components. The implementation of the ACA provides the opportunity to consider how to incorporate preparedness into all aspects of the health care system. The Impacts of the Affordable Care Act on Preparedness Resources and Programs is the summary of a workshop convened by the Institute of Medicine's Forum on Medical and Public Health Preparedness for Catastrophic Events in November 2013 to discuss how changes to the health system as a result of the ACA might impact medical and public health preparedness programs across the nation. This report discusses challenges and benefits of the Affordable Care Act to disaster preparedness and response efforts around the country and considers how changes to payment and reimbursement models will present opportunities and challenges to strengthen disaster preparedness and response capacities."--Publisher's description.

[Measuring What Matters](#) Aug 26 2019 The Ryan White Comprehensive AIDS Resources Emergency (CARE) Act gives funding to cities, states, and other public and private entities to provide care and support services to individuals with HIV and AIDS who have low-incomes and little or no insurance. The CARE Act is a discretionary program that relies on annual appropriations from Congress to provide care for low-income, uninsured, or underinsured individuals who have no other resources to pay for care. Despite its successes, funding has been insufficient to address all of the inequalities and gaps in coverage for people with HIV. In response to a congressional mandate, an Institute of Medicine committee was formed to reevaluate whether CARE allocation strategies are an equitable and efficient way of distributing resources to jurisdictions with the greatest needs and to assess whether quality of care can be refined and expanded. [Measuring What Matters: Allocation, Planning, and Quality Assessment for the Ryan White CARE Act](#) proposes several types of analyses that could be used to guide the evaluation and improvement of allocation formulas, as well as a framework for assessing quality of care provided to HIV-infected persons.

[Suriname](#) Oct 28 2019 This paper reviews economic developments in Suriname during 1994–96. In 1995, there was a major turnaround in Suriname's economic and financial situation following the expansionary fiscal and monetary policies pursued in the first half of the 1990s and the political and economic disruptions of the 1980s. The marked improvement was owing to the restoration of financial discipline, a strengthening of international bauxite prices, and the unification and subsequent stabilization of the exchange rate. The inflation fell further to less than 1 percent in 1996.

[Addiction Recovery Management](#) Jan 30 2020 [Addiction Recovery Management: Theory, Research, and Practice](#) is the first book on the recovery management approach to addiction treatment and post-treatment support services. Distinctive in combining theory, research, and practice within the same text, this ground-breaking title includes authors who are the major theoreticians, researchers, systems administrators, clinicians and recovery advocates who have developed the model. State-of-the art and the definitive text on the topic, [Addiction Recovery Management: Theory, Research, and Practice](#) is mandatory reading for clinicians and all professionals who work with patients in recovery or who are interested in the field.

**Theological Ethics and Global Dynamics** Apr 14 2021 The nature of ethics has been the subject of much controversy and argument in recent decades. [Theological Ethics and Global Dynamics](#) tackles these various debates, offering a wide-ranging, comprehensive, and provocative statement of the nature of theological ethics in global times. Offers an accessible, lively, and provocative statement of the nature of moral philosophy and theological ethics in contemporary times. Tackles various perspectives on debates about distinctly Christian ethics. Argues that we need to reframe the arena in which moral questions are asked. Engages a range of positions, exploring distinctively modern issues such as moral and cultural relativism, globalization, problems of consumption and violence, and religious pluralism. Addresses the complexity of certain ethical decisions, which are difficult and far from clear-cut, and yet presents an ethical understanding which is both humane and deeply religious.

**Enthymemes and Topoi in Dialogue** Aug 07 2020 "In [Enthymemes and Topoi in Dialogue](#), Ellen Breitholtz presents a novel and precise account of reasoning from an interactional perspective. The account draws on the concepts of enthymemes and topoi, originating in Aristotelian rhetoric and dialectic, and integrates these in a formal dialogue semantic account using TTR, a type theory with records. Argumentation analysis and formal approaches to reasoning often focus the logical validity of arguments on inferences made in discourse from a god's-eye perspective. In contrast, Breitholtz's account emphasises the individual perspectives of interlocutors and the function and acceptability of their reasoning in context. This provides an analysis of interactions where interlocutors have access to different topoi and therefore make different inferences"--

Facing Addiction in America Jun 04 2020 All across the United States, individuals, families, communities, and health care systems are struggling to cope with substance use, misuse, and substance use disorders. Substance misuse and substance use disorders have devastating effects, disrupt the future plans of too many young people, and all too often, end lives prematurely and tragically. Substance misuse is a major public health challenge and a priority for our nation to address. The effects of substance use are cumulative and costly for our society, placing burdens on workplaces, the health care system, families, states, and communities. The Report discusses opportunities to bring substance use disorder treatment and mainstream health care systems into alignment so that they can address a person's overall health, rather than a substance misuse or a physical health condition alone or in isolation. It also provides suggestions and recommendations for action that everyone—individuals, families, community leaders, law enforcement, health care professionals, policymakers, and researchers—can take to prevent substance misuse and reduce its consequences.

How I Met Myself Level 3 Jul 26 2019 "One icy winter's evening in Budapest, a man runs straight into John Taylor as he walks home through the narrow streets. John falls over into the snow and looks up at the man's face. 'I felt very afraid. Because what I saw was me. My face looking down at me. My mouth saying sorry.' Who is the man, and how will John's life change?"

A National Strategy for the Elimination of Hepatitis B and C Dec 23 2021 Hepatitis B and C cause most cases of hepatitis in the United States and the world. The two diseases account for about a million deaths a year and 78 percent of world's hepatocellular carcinoma and more than half of all fatal cirrhosis. In 2013 viral hepatitis, of which hepatitis B virus (HBV) and hepatitis C virus (HCV) are the most common types, surpassed HIV and AIDS to become the seventh leading cause of death worldwide. The world now has the tools to prevent hepatitis B and cure hepatitis C. Perfect vaccination could eradicate HBV, but it would take two generations at least. In the meantime, there is no cure for the millions of people already infected. Conversely, there is no vaccine for HCV, but new direct-acting antivirals can cure 95 percent of chronic infections, though these drugs are unlikely to reach all chronically-infected people anytime soon. This report, the second of two, builds off the conclusions of the first report and outlines a strategy for hepatitis reduction over time and specific actions to achieve them.

Steel Designers' Manual Fifth Edition: The Steel Construction Institute Aug 19 2021 This classic manual for structural steelwork design was first published in 1956. Since then, it has sold many thousands of copies worldwide. The fifth edition is the first major revision for 20 years and is the first edition to be fully based on limit state design, now used as the primary design method, and on the UK code of practice, BS 5950. It provides, in a single volume, all you need to know about structural steel design.

Eliminating the Public Health Problem of Hepatitis B and C in the United States Dec 11 2020 Hepatitis B and C cause most cases of hepatitis in the United States and the world. The two diseases account for about a million deaths a year and 78 percent of world's hepatocellular carcinoma and more than half of all fatal cirrhosis. In 2013 viral hepatitis, of which hepatitis B virus (HBV) and hepatitis C virus (HCV) are the most common types, surpassed HIV and AIDS to become the seventh leading cause of death worldwide. The world now has the tools to prevent hepatitis B and cure hepatitis C. Perfect vaccination could eradicate HBV, but it would take two generations at least. In the meantime, there is no cure for the millions of people already infected.

Conversely, there is no vaccine for HCV, but new direct-acting antivirals can cure 95 percent of chronic infections, though these drugs are unlikely to reach all chronically-infected people anytime soon. This report, the first of two, examines the feasibility of hepatitis B and C elimination in the United States and identifies critical success factors. The phase two report will outline a strategy for meeting the elimination goals discussed in this report.
