Eva and Otto Jun 19 2021 Eva and Otto is a true story about German opposition and resistance to Hitler as revealed through the early lives of Eva Lewinski Pfister (1910–1991) and Otto Pfister (1900–1985). It is an intimate and epic account of two Germans—Eva born Jewish, Otto born Catholic—who worked with a little-known German political group that resisted and fought against Hitler in Germany before 1933 and then in exile in Paris before the German invasion of France in May 1940. After their improbable escapes from separate internment and imprisonment in Europe, Eva obtained refuge in America in October 1940 where she worked to rescue other endangered political refugees, including Otto, with the help of Eleanor Roosevelt. As revealed in recently declassified records, Eva and Otto later engaged in different secret assignments with the US Office of Strategic Services (OSS) in support of the Allied war effort. Despite their vastly different backgrounds, Eva and Otto gave each other hope and strength as they acted upon what they understood to be an ethical duty to help others threatened by fascism. The book provides a sobering insight into the personal risks and costs of a commitment to that duty. Their unusually beautiful writing—directed to each other in diaries and correspondence during two long periods of wartime separation—also reveals an unlikely and inspiring love story.

Guide to Effective Grant Writing Apr 17 2021 **Guide to Effective Grant Writing: How to Write a Successful NIH Grant** is written to help the 100,000+ post-graduate students and professionals who need to write effective proposals for grants. Procuring grant funding is the central key to survival for any academic researcher in the biological sciences; thus, being able to write a proposal that effectively illustrates one's ideas is essential. Covering all aspects of the proposal process, from the most basic questions about form and style to the task of seeking funding, this volume offers clear advice backed up with excellent examples. Included are a number of specimen proposals to help shed light on the important issues surrounding the writing of proposals. The Guide is a clear, straight-forward, and reader-friendly tool. **Guide to Effective Grant Writing: How to Write a Successful NIH Grant Writing** is based on Dr. Yang's extensive experience serving on NIH grant review panels; it covers the common mistakes and problems he routinely witnesses while reviewing grants.

Dynamic Covalent Chemistry Aug 22 2021 The first and only exhaustive review of the theory, thermodynamic fundamentals, mechanisms, and design principles of dynamic covalent systems **Dynamic Covalent Chemistry: Principles, Reactions, and Applications** presents a comprehensive review of the theory, thermodynamic fundamentals, mechanisms, and design principles of dynamic covalent systems. It features contributions from a team of international scientists, grouped into three main sections covering the principles of dynamic covalent chemistry, types of dynamic covalent chemical reactions, and the latest applications of dynamic covalent chemistry (DCvC) across an array of fields. The past decade has seen tremendous progress in (DCvC) research and industrial applications. The great synthetic power and reversible nature of this chemistry has enabled the development of a variety of functional molecular systems and materials for a broad range of applications in organic synthesis, materials development, nanotechnology, drug discovery, and biotechnology. Yet, until now, there have been no authoritative references devoted exclusively to this powerful synthetic tool, its current applications, and the most promising directions for future development. **Dynamic Covalent Chemistry: Principles, Reactions, and Applications** fills the yawning gap in the world literature with comprehensive coverage of: The energy landscape, the importance of reversibility, enthalpy vs. entropy, and reaction kinetics Single-type, multi-type, and non-covalent reactions, with a focus on the advantages and disadvantages of each reaction type Dynamic covalent assembly of discrete molecular architectures, responsive polymer synthesis, and drug discovery Important emerging applications of dynamic covalent chemistry in nanotechnology, including both material- and bio-oriented directions Real-world examples describing a wide range of industrial applications for organic synthesis, functional materials development, nanotechnology, drug delivery and more **Dynamic Covalent Chemistry: Principles, Reactions, and Applications** is must-reading for researchers and chemists working in dynamic covalent chemistry and supramolecular chemistry. It will also be of value to academic researchers and advanced students interested in applying the principles of (DCvC) in organic synthesis, functional materials development, nanotechnology, drug discovery, and chemical biology.

Benchmarking with DEA, SFA, and R Dec 14 2020 This book covers recent advances in efficiency evaluations, most notably Data Envelopment Analysis (DEA) and Stochastic Frontier Analysis (SFA) methods. It introduces the underlying theories, shows how to make the relevant calculations and discusses applications. The aim is to make the reader aware of the pros and cons of the different methods and to show how to use these methods in both standard and non-standard cases. Several software packages have been developed to solve some of the most common DEA and SFA models. This book relies on R, a free, open source software environment for statistical computing and graphics. This enables the reader to solve not only standard problems, but also many other problem variants. Using R, one can focus on understanding the context and developing a good model. One is not restricted to predefined model variants and to a one-size-fits-all approach. To facilitate the use of R, the authors have developed an R package called Benchmarking, which implements the main methods within both DEA and SFA. The book uses mathematical formulations of models and assumptions, but it de-emphasizes the formal proofs - in part by placing them in appendices -- or by referring to the original sources. Moreover, the book emphasizes the usage of the theories and the interpretations of the mathematical formulations. It includes a series of small examples, graphical illustrations, simple extensions and questions to think about. Also, it combines the formal models with less formal economic and organizational thinking. Last but not least it discusses some larger applications with significant practical impacts, including the design of benchmarking-based regulations of energy companies in different European countries, and the development of merger control programs for competition authorities.

The Essentials of Theory U Sep 22 2021 A powerful pocket guide for practitioners that distills all of the research and materials found in Otto Scharmer's seminal texts *Theory U* and *Leading from the Emerging Future*. Creating a Better Future This book offers a concise, accessible guide to the key concepts and applications in Otto Scharmer's classic *Theory U*. Scharmer argues that our capacity to pay attention coshapes the world. What prevents us from attending to situations more effectively is that we aren't fully aware of that interior condition from which our attention and actions originate. Scharmer calls this lack of awareness our blind spot. He illuminates the blind spot in leadership today and offers hands-on methods to help change makers overcome it through the process, principles, and practices of *Theory U*. And he outlines a framework for updating the "operating systems" of our educational institutions, our economies, and our democracies. This book enables leaders and organizations in all industries and sectors to shift awareness, connect with the highest future possibilities, and strengthen the capacity to co-shape the future.

Leading from the Emerging Future Aug 29 2019 Our Time Is Now We have entered an age of disruption. Financial collapse, climate change, resource depletion, and a growing gap between rich and poor are but a few of the signs. Otto Scharmer and Katrin Kauffer ask, why do we collectively create results nobody wants? Meeting the challenges of this century requires updating our economic logic and operating system from an obsolete "ego-system" focused entirely on the well-being of oneself to an eco-system awareness that emphasizes the well-being of the whole. Filled with real-world examples, this thought-provoking guide presents proven practices for building a new economy that is more resilient, intentional, inclusive, and aware. "A watershed! An inspiring, practical weaving of the inner and outer dimensions of the systemic changes so many around the world are now working toward." —Peter Senge, Senior Lecturer, MIT Sloan School of Management; Founding Chair, Society for Organizational Learning; and author of *The Fifth Discipline* "Scharmer and Kauffer have succeeded in writing the book that has the potential to transform civilization from one based on a rapacious, ego-driven economics to a viable, ecological, awareness-based model. This is a must-read for anyone who cares. It may well be the single most important book you ever read." —Arthur Zajonc, President, Mind and Life Institute, and author of *Meditation as Contemplative Inquiry* "Scharmer and Kauffer provide a creative and practical approach to shifting our economies. I see business as a movement, and this book shares that movement with the world, offering us inspiration to tap into the deeper levels of our humanity and urging us to transform the crises of our times." —Eileen Fisher, founder, Eileen Fisher, Inc. "The shift to an eco-system economy is emerging everywhere around us. Otto's and Katrin's clarity in identifying that this shift requires change-makers to expand our thinking from the head to the heart has helped me to be more intentional in designing processes to awaken the hearts of entrepreneurs everywhere. This is a necessary condition for the emergence of the new economy." —Michelle Long, Executive Director, Business Alliance for Local Living Economies "The purpose of business is to enhance the well-being of society. The 4.0 framework for transforming capitalism matters because it addresses a blind spot in our current discourse: how to create institutional innovations that could shift our economy from ego- to eco-system awareness at the scale of the whole." —Guilherme Peirão Leal, founder and Cochairman, Natura Cosméticos

Chemometrics Mar 17 2021 The third edition of this long-selling introductory textbook and ready reference covers all pertinent topics, from basic statistics via modeling and databases right up to the latest regulatory issues. Analytical databases are equally covered as are applications of multiway analysis, artificial intelligence, fuzzy theory, neural networks, and genetic algorithms. The new edition has 10% new content to cover such recent developments as orthogonal signal correction and new data exchange formats, tree based classification and regression, independent component analysis, ensemble methods and neuro-fuzzy systems. It still retains, however, the proven features from previous editions: worked examples, questions and problems, additional information and brief explanations in the margin.

The Roma Struggle for Compensation in Post-war Germany Oct 31 2019 Thirty years passed before it was accepted, in West Germany and elsewhere, that the Roma (Germany's Gypsies) had been Holocaust victims. And, similarly, it took thirty years for the West German state to admit that the sterilisation of Roma had been part of the 'Final Solution'. Drawing on a substantial body of previously unseen sources, this book examines the history of the struggle of Roma for recognition as racially persecuted victims of National Socialism in post-war Germany. Since modern academics belatedly began to take an interest in them, the Roma have been described as 'forgotten victims'. This book looks at the period in West Germany between the end of the War and the beginning of the Roma civil rights movement in the early 1980s, during which the Roma were largely passed over when it came to compensation. The complex reasons for this are at the heart of this book.

Theory U Oct 24 2021 Shows how leaders can access the deepest source of inspiration and vision • Includes dozens of tested exercises, practices, and real-world examples We live in a time of massive institutional failure, one that requires a new consciousness and a new collective leadership capacity. In this groundbreaking book, Otto Scharmer invites us to see the world in new ways and in so doing discover a revolutionary approach to leadership. What we pay attention to and how we pay attention is key to what we create. What prevents us from attending to situations more effectively is that we aren't fully aware of and in touch with the inner place from which attention and intention originate. This is what Scharmer calls our blind spot. By moving through Scharmer's U process, we consciously access the blind spot and learn to connect to our authentic Self—the deepest source of knowledge and inspiration—in the realm of "presencing," a term coined by Scharmer that combines the concepts of presence and sensing. Based on ten years of research and action learning and interviews with over 150 practitioners and thought leaders, Theory U offers a rich diversity of compelling stories and examples and includes dozens of exercises and practices that allow leaders, and entire organizations, to shift awareness, connect with the best future possibility, and gain the ability to realize it.

The Essentials of Theory U Apr 29 2022 A guide to the key concepts and applications in the author's classic book, this accessible resource illuminates the blind spot in leadership today and offers hands-on methods to help change makers overcome it through the process, principles, and practices of Theory U. --

A Biologist's Guide to Mathematical Modeling in Ecology and Evolution Dec 26 2021 Thirty years ago, biologists could get by with a rudimentary grasp of mathematics and modeling. Not so today. In seeking to answer fundamental questions about how biological systems function and change over time, the modern biologist is as likely to rely on sophisticated mathematical and computer-based models as traditional fieldwork. In this book, Sarah Otto and Troy Day provide biology students with the tools necessary to both interpret models and to build their own. The book starts at an elementary level of mathematical modeling, assuming that the reader has had high school mathematics and first-year calculus. Otto and Day then gradually build in depth and complexity, from classic models in ecology and evolution to more intricate class-structured and probabilistic models. The authors provide primers with instructive exercises to introduce readers to the more advanced subjects of linear algebra and probability theory. Through examples, they describe how models have been used to understand such topics as the spread of HIV, chaos, the age structure of a country, speciation, and extinction. Ecologists and evolutionary biologists today need enough mathematical training to be able to assess the power and limits of biological models and to develop theories and models themselves. This innovative book will be an indispensable guide to the world of mathematical models for the next generation of biologists. A how-to guide for developing new mathematical models in biology Provides step-by-step recipes for constructing and analyzing models Interesting biological applications Explores classical models in ecology and evolution Questions at the end of every chapter Primers cover important mathematical topics Exercises with answers Appendixes summarize useful rules Labs and advanced material available
